GLOSSARY

AFP	Administradora de Fondos de Pensiones	A legal entity that manages a Chilean pension fund.
Ampla	Ampla Energia e Serviços S.A.	A publicly held Brazilian distribution company operating in Rio de Janeiro, owned by Enel Brasil, our subsidiary.
ANEEL	Agência Nacional de Energia Elétrica	Brazilian governmental agency for electric energy.
BNDES	Banco Nacional de Desarrollo Económico y Social	The National Bank for Economic and Social Development ("BNDES") is the principal agent of development in Brazil with a focus on sustainable social and environmental development.
Cachoeira Dourada	Centrais Elétricas Cachoeira Dourada S.A.	Brazilian generation company owned by Enel Brasil, our subsidiary.
CAMMESA	Compañía Administradora del Mercado Mayorista Eléctrico S.A.	Argentine autonomous entity in charge of the operation of the <i>Mercado Eléctrico Mayorista</i> (Wholesale Electricity Market), or MEM. CAMMESA's stockholders are generation, transmission and distribution companies, large users and the Secretariat of Energy.
CDEC	Centro de Despacho Económico de Carga	Autonomous entity in two Chilean electric systems in charge of coordinating the efficient operation and dispatch of generation units to satisfy demand.
Celta	Compañía Eléctrica Tarapacá S.A.	Chilean generation subsidiary of Endesa Chile that operates plants in the SING and SIC. Celta merged with Endesa Eco in November 2013 and currently operates several plants in northern Chile including Pangue, San Isidro, and those previously held by Endesa Eco.
Cemsa	Central Comercializadora de Energía S.A.	Energy trading company with operations in Argentina, and our subsidiary since the 2013 capital increase.
Chilectra	Chilectra S.A.	Chilean electricity distribution company operating in the Santiago metropolitan area and our subsidiary.
CIEN	Companhia de Interconexão Energética S.A.	Brazilian transmission company, wholly- owned by Enel Brasil, our subsidiary.
CNE	Comisión Nacional de Energía	Chilean National Energy Commission, governmental entity with responsibilities under the Chilean regulatory framework.
Codensa	Codensa S.A. E.S.P.	Colombian distribution company that operates mainly in Bogotá and is controlled by us.

Coelce	Companhia Energética do Ceará S.A.	A publicly held Brazilian distribution company operating in the state of Ceará. Coelce is controlled by Enel Brasil, our subsidiary.
COES	Comité de Operación Económica del Sistema	Peruvian entity in charge of coordinating the efficient operation and dispatch of generation units to satisfy demand.
Costanera	Central Costanera S.A.	A publicly held Argentine generation company controlled by Endesa Chile. Formerly known as Endesa Costanera.
CREG	Comisión de Regulación de Energía y Gas	Colombian Commission for the Regulation of Energy and Gas.
CTM	Compañía de Transmisión del Mercosur S.A.	Argentine transmission company and subsidiary of Enel Brasil.
DECSA	Distribuidora Eléctrica de Cundinamarca S.A.	Colombian distribution company and a subsidiary of Codensa.
Dock Sud	Central Dock Sud S.A.	Argentine generation company and our subsidiary since the 2013 capital increase.
Edegel	Edegel S.A.A.	A publicly held Peruvian generation company and a subsidiary of Endesa Chile.
Edelnor	Empresa de Distribución Eléctrica de Lima Norte S.A.A.	A publicly held Peruvian distribution company, with a concession area in the northern part of Lima, and our subsidiary.
Edesur	Empresa Distribuidora Sur S.A.	Argentine distribution company, with a concession area in the south of the Buenos Aires greater metropolitan area, and our subsidiary.
EEB	Empresa de Energía de Bogotá S.A.	Colombian stated-owned financial and energy holding company, with investments in the electricity generation, transmission, trading and distribution sectors and in the natural gas transmission, distribution and trading sectors.
EEC	Empresa de Energía de Cundinamarca S.A. E.S.P.	Colombian distribution company and a subsidiary of DECSA, in which we hold 19.5% interest.
EEPSA	Empresa Eléctrica de Piura S.A.	A publicly held Peruvian generation company with natural gas thermal plants which has been our subsidiary since the 2013 capital increase.
El Chocón	Hidroeléctrica El Chocón S.A.	Argentine generation company with two hydroelectric plants, El Chocón and Arroyito, both located in the Limay River, Argentina and a subsidiary of Endesa Chile.

Emgesa Emgesa S.A. E.S.P. Colombian generation company controlled by Endesa Chile. Endesa Chile Empresa Nacional de Electricidad S.A. Our publicly held generation subsidiary with consolidated operations in Chile, Argentina, Colombia and Peru, and an equity interest in Brazil. Endesa Eco Endesa Eco S.A. A former Chilean subsidiary of Endesa Chile and owner of Central Eólica Canela S.A. and Ojos de Agua mini hydroelectric plant. Endesa Eco merged with Celta in November 2013. Endesa Spain Endesa, S.A. A Spanish electricity generation and distribution company which sold its 60.6% beneficial interest in us to a subsidiary of Enel in October 2014. Our former parent company. Enel Enel S.p.A. An Italian power company with a 60.6% beneficial interest in us. Our parent company. Enel Brasil Enel Brasil S.A. Brazilian holding company and our subsidiary. Enel Brasil was formerly known as Endesa Brasil S.A. Enel Iberoamérica A wholly-owned subsidiary of Enel and Enel Iberoamérica, S.R.L. owner of 20.3% of us, which it acquired from Endesa Spain in October 2014. Enel Iberoamérica was formerly known as Enel Energy Europe S.R.L. Enel Latinoamérica Enel Latinoamérica, S.A. A wholly-owned subsidiary of Enel Iberoamérica and owner of 40.3% of us. Enersis Enersis S.A. Our company, a publicly held limited liability stock corporation incorporated under the laws of the Republic of Chile, with subsidiaries engaged primarily in the generation, transmission and distribution of electricity in Chile, Argentina, Brazil, Colombia, and Peru. Registrant of this Report. **ENRE** Ente Nacional Regulador de la Electricidad Argentine national regulatory authority for the energy sector. **ESM** Extraordinary Shareholders' Meeting Extraordinary Shareholders' Meeting. **FONINVEMEM** Fondo para Inversiones Necesarias que Argentine fund created to increase electricity permitan Incrementar la Oferta de Energía supply in the MEM. Eléctrica en el Mercado Eléctrico Mayorista Central Geradora Termelétrica Fortaleza Fortaleza Brazilian generation company that operates in the state of Ceará. Fortaleza is wholly-S.A.owned by Enel Brasil, our subsidiary.

GasAtacama GasAtacama S.A. Company involved in gas transportation and electricity generation in northern Chile that is a subsidiary of Endesa Chile. GasAtacama Holding Inversiones GasAtacama Holding Ltda. A holding company which owns GasAtacama and is a subsidiary of Endesa Chile following the acquisition of an additional 50% interest from Southern Cross Latin America Private Equity Fund III, L.P. in April 2014. AES Gener S.A. Gener Chilean generation company that competes with the Company in Chile, Argentina and Colombia. **GNL Quintero** Company created to develop, build, finance, GNL Quintero S.A. own and operate a LNG regasification facility at Quintero Bay (Chile) in which LNG is unloaded, stored and regasified. **IFRS** International Financial Reporting Standards Accounting standards adopted by the Company on January 1, 2009. **IMV** Inmobiliaria Manso de Velasco Ltda. Our wholly-owned real estate subsidiary of, which merged into ICT in December 2014. LNG Liquefied Natural Gas. Liquefied natural gas. MEM Mercado Eléctrico Mayorista Wholesale Electricity Market in Argentina, Colombia, and Peru. MME Brazilian Ministry of Mines and Energy. Ministério de Minas e Energia **NCRE** Non-Conventional Renewable Energy Energy sources which are continuously replenished by natural processes, such as wind, biomass, mini-hydro, geothermal, wave, or tidal energy. NIS Sistema Interconectado Nacional National interconnected electric system. There are such systems in Chile, Argentina, Brazil, and Colombia. **ONS** Operador Nacional do Sistema Elétrico Electric System National Operator. Brazilian non-profit private entity responsible for the planning and coordination of operations in interconnected systems. Osinergmin Organismo Supervisor de la Inversión en **Energy and Mining Investment Supervisory** Energía y Minería Authority, the Peruvian regulatory electricity authority. **OSM** Ordinary Shareholders' Meeting Ordinary Shareholders' Meeting. Empresa Eléctrica Pangue S.A. A former Chilean subsidiary of Endesa Chile Pangue and former owner of the Pangue power station. Pangue merged with San Isidro, which merged with Endesa Eco, which then merged with Celta. As a result, Pangue is now consolidated by Celta. Pehuenche Empresa Eléctrica Pehuenche S.A. A publicly held Chilean electricity company, owner of three power stations in the Maule River basin and a subsidiary of Endesa Chile.

Compañía Eléctrica San Isidro S.A.	A former Chilean subsidiary of Endesa Chile. San Isidro merged with Pangue in May 2012 and Endesa Eco merged with San Isidro in September 2013. Celta merged with Endesa Eco in November 2013. As a result, San Isidro is now consolidated by Celta.
Superintendencia de Electricidad y Combustible	Chilean Superintendency of Electricity and Fuels, a governmental entity in charge of supervising the Chilean electricity industry.
Sistema Eléctrico Interconectado Nacional	Peruvian interconnected electric system.
Sistema Interconectado Central	Chilean central interconnected electric system covering all of Chile except the north and the extreme south.
Servicios Informáticos e Inmobiliarios Ltda.	A business consultancy in technology, information and computer science, telecommunications, data transmission and real estate which was formed following the merger of ICT Servicios Informáticos Ltda. ("ICT") with Inmobiliaria Manso de Velasco Ltda. ("IMV").
Sistema Interconectado del Norte Grande	Chilean interconnected electric system operating in northern Chile.
Superintendencia de Valores y Seguros	Chilean authority in charge of supervising public companies, securities and the insurance business.
Transportadora de Energía S.A.	Transmission company with operations in Argentina and a subsidiary of Enel Brasil.
Unidad de Fomento	Chilean inflation-indexed, Chilean pesodenominated monetary unit.
Unidad Tributaria Anual	Chilean annual tax unit. One UTA equals 12 <i>Unidad Tributaria Mensual</i> ("UTM"), which is a Chilean inflation-indexed monthly tax unit used to define fines, among other purposes.
Valor Agregado de Distribución	Value added from distribution of electricity.
Expertos de Mercado S.A. E.S.P.	A subsidiary of Interconexión Eléctrica S.A. ("ISA"), a Colombian company that provides system management in real time services in electrical, financial and transportation sectors.
Yacylec S.A.	Argentine transmission company and our associate since the 2013 capital increase.
	Superintendencia de Electricidad y Combustible Sistema Eléctrico Interconectado Nacional Sistema Interconectado Central Servicios Informáticos e Inmobiliarios Ltda. Sistema Interconectado del Norte Grande Superintendencia de Valores y Seguros Transportadora de Energía S.A. Unidad de Fomento Unidad Tributaria Anual Valor Agregado de Distribución Expertos de Mercado S.A. E.S.P.

INTRODUCTION

As used in this Report on Form 20-F, first person personal pronouns such as "we", "us" or "our" refer to Enersis S.A. ("Enersis" or the "Company") and our consolidated subsidiaries unless the context indicates otherwise. Unless otherwise noted, our interest in our principal subsidiaries, and jointly-controlled entities and associates is expressed in terms of our economic interest as of December 31, 2014.

We are a Chilean company engaged through our subsidiaries and jointly-controlled entities in the electricity generation, transmission and distribution businesses in Chile, Brazil, Colombia, Peru and Argentina. As of the date of this Report, we own 60.0% of Empresa Nacional de Electricidad S.A. ("Endesa Chile"), a Chilean electricity generation company, and 99.1% of Chilectra S.A. ("Chilectra"), a Chilean electricity distribution company. As of the date of this Report, Enel S.p.A. ("Enel"), an Italian generation and distribution company, beneficially owns 60.6% of Enersis through wholly-owned Spanish subsidiaries.

Financial Information

In this Report on Form 20-F, unless otherwise specified, references to "U.S. dollars" or "US\$", are to dollars of the United States of America; references to "pesos" or "Ch\$" are to Chilean pesos, the legal currency of Chile; references to "Ar\$" or "Argentine pesos" are to the legal currency of Argentina; references to "R\$" or "reais" are to Brazilian reais, the legal currency of Brazil; references to "soles" are to Peruvian Nuevo Sol, the legal currency of Peru; references to "CPs" or "Colombian pesos" are to the legal currency of Colombia; references to "€" or "Euros" are to the legal currency of the European Union; and references to "UF" are to Development Units (*Unidades de Fomento*).

The *Unidad de Fomento* is a Chilean inflation-indexed, peso-denominated monetary unit that is adjusted daily to reflect changes in the official Consumer Price Index ("CPI") of the Chilean National Institute of Statistics (*Instituto Nacional de Estadísticas* or "INE"). The UF is adjusted in monthly cycles. Each day in the period beginning on the tenth day of the current month through the ninth day of the succeeding month, the nominal peso value of the UF is indexed in order to reflect a proportionate amount of the change in the Chilean CPI during the prior calendar month. As of December 31, 2014, one UF was equivalent to Ch\$ 24,627.10. The U.S. dollar equivalent of one UF was US\$ 40.59 as of December 31, 2014, using the Observed Exchange Rate reported by the Central Bank of Chile (*Banco Central de Chile*) as of December 31, 2014 of Ch\$ 606.75 per US\$ 1.00. The U.S. dollar observed exchange rate (*dólar observado*) (the "Observed Exchange Rate"), which is reported by the Central Bank of Chile and published daily on its web page, is the weighted average exchange rate of the previous business day's transactions in the Formal Exchange Market

The Central Bank of Chile may intervene by buying or selling foreign currency on the Formal Exchange Market to maintain the Observed Exchange Rate within a desired range.

As of March 31, 2015, one UF was equivalent to Ch\$ 24,622.78. The U.S. dollar equivalent of one UF was US\$ 39.30 on March 31, 2015, using the Observed Exchange Rate reported by the Central Bank of Chile as of such date of Ch\$ 626.58 per US\$ 1.00.

Our consolidated financial statements and, unless otherwise indicated, other financial information concerning us included in this Report are presented in Chilean pesos. Since January 1, 2009, we have prepared our consolidated financial statements in accordance with International Financial Reporting Standards ("IFRS"), as issued by the International Accounting Standard Board ("IASB").

All of our subsidiaries are consolidated and all their assets, liabilities, income, expenses and cash flows are included in the consolidated financial statements after making the adjustments and eliminations related to intra-group transactions.

Investments in associated companies over which we exercise significant influence, are recorded in our consolidated financial statements using the equity method. For detailed information regarding subsidiaries, jointly-controlled entities and associated companies, see Appendices 1, 2 and 3 to the consolidated financial statements.

For the convenience of the reader, this Report contains translations of certain Chilean peso amounts into U.S. dollars at specified rates. Unless otherwise indicated, the U.S. dollar equivalent for information in Chilean pesos is based on the Observed Exchange Rate for December 31, 2014, as defined in "Item 3. Key Information — A. Selected Financial Data — Exchange Rates". The Federal Reserve Bank of New York does not report a noon buying rate for Chilean pesos. No representation is made that the Chilean peso or U.S. dollar amounts shown in this Report could have been or could be converted into U.S. dollars or Chilean pesos, as the case may be, at such rate or at any other rate. See "Item 3. Key Information — A. Selected Financial Data — Exchange Rates".

Technical Terms

References to "TW" are to terawatts; references to "GW" and "GWh" are to gigawatts and gigawatt hours, respectively; references to "MW" and "MWh" are to megawatts and megawatt hours, respectively; references to "kW" and "kWh" are to kilowatts and kilowatt hours, respectively; references to "kV" are to kilowolts, and references to "MVA" are to megavolt amperes. References to "BTU" and "MBTU" are to British thermal unit and million British thermal units, respectively. A "BTU" is an energy unit equal to approximately 1055 joules. References to "Hz" are to hertz; and references to "mtpa" are to metric tons per annum. Unless otherwise indicated, statistics provided in this Report with respect to the installed capacity of electricity generation facilities are expressed in MW. One TW equals 1,000 GW, one GW equals 1,000 MW, and one MW equals 1,000 kW.

Statistics relating to aggregate annual electricity production are expressed in GWh and based on a year of 8,760 hours, except for leap years (such as 2012), which are based on 8,784 hours. Statistics relating to installed capacity and production of the electricity industry do not include electricity of self-generators. Statistics relating to our production do not include electricity consumed by us by our own generation units.

Energy losses experienced by generation companies during transmission are calculated by subtracting the number of GWh of energy sold from the number of GWh of energy generated (excluding their own energy consumption and losses on the part of the power plant), within a given period. Losses are expressed as a percentage of total energy generated.

Energy losses during distribution are calculated as the difference between total energy purchased (GWh of electricity demand, including own generation) and the energy sold (also measured in GWh), within a given period. Distribution losses are expressed as a percentage of total energy purchased. Losses in distribution arise from illegally tapped energy as well as technical losses.

Calculation of Economic Interest

References are made in this Report to the "economic interest" of Enersis in its related companies. In circumstances where we do not directly own an interest in a related company, our economic interest in such ultimate related company is calculated by multiplying the percentage of economic interest in a directly held related company by the percentage of economic interest of any entity in the ownership chain of such related company. For example, if we own 60% of a directly held subsidiary and that subsidiary owns 40% of an associate, our economic interest in such associate would be 60% times 40%, or 24%.

Rounding

Certain figures included in our consolidated financial statements have been rounded for ease of presentation. Percentages expressed in this Report may not have been calculated using rounded figures, but by using amounts prior to rounding. For this reason, percentages expressed in this Report may vary from those obtained by performing the same calculations using figures in our consolidated financial statements. Certain other amounts that appear in the tables in this Report may not total exactly due to rounding.

Forward-Looking Statements

This Report contains statements that are or may constitute forward-looking statements within the meaning of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended (the "Exchange Act"). These statements appear throughout this Report and include statements regarding our intent, belief or current expectations, including but not limited to any statements concerning:

- · our capital investment program;
- trends affecting our financial condition or results from operations;
- our dividend policy;
- the future impact of competition and regulation;
- political and economic conditions in the countries in which we or our related companies operate or may operate in the future;
- any statements preceded by, followed by or that include the words "believes", "expects", "predicts", "anticipates", "intends", "estimates", "should", "may" or similar expressions; and
- other statements contained or incorporated by reference in this Report regarding matters that are not historical facts.

Because such statements are subject to risks and uncertainties, actual results may differ materially from those expressed or implied by such forward-looking statements. Factors that could cause actual results to differ materially include, but are not limited to:

- · changes in the regulatory framework of the electricity industry in one or more of the countries in which we operate;
- our ability to implement proposed capital expenditures, including our ability to arrange financing where required;

- the nature and extent of future competition in our principal markets;
- political, economic and demographic developments in the markets in South America where we conduct our business; and
- the factors discussed below under "Risk Factors".

You should not place undue reliance on such statements, which speak only as of the date that they were made. Our independent registered public accounting firm has not examined or compiled the forward-looking statements and, accordingly, does not provide any assurance with respect to such statements. You should consider these cautionary statements together with any written or oral forward-looking statements that we may issue in the future. We do not undertake any obligation to release publicly any revisions to forward-looking statements contained in this Report to reflect later events or circumstances or to reflect the occurrence of unanticipated events.

For all these forward-looking statements, we claim the protection of the safe harbor for forward-looking statements contained in the Private Securities Litigation Reform Act of 1995.

RECENT DEVELOPMENTS

Corporate Reorganization Process

On April 22, 2015, our Board of Directors was informed of a significant event released as of the same date by our ultimate parent company, Enel, in which it refers to the convening of the Boards of Directors of Enersis, Endesa Chile and Chilectra to begin the assessment of a potential corporate reorganization process to separate electricity generation and distribution activities and assets in Chile from those in Argentina, Brazil, Colombia and Peru.

Later, on April 28, 2015, our Board of Directors unanimously approved the initiation of the assessment and instructed our management to analyze the aforementioned proposal and to convey this initiative to the Board of Directors of both Endesa Chile and Chilectra.

The objective of this reorganization is to resolve certain duplications and redundancies that exist as a result of our complex corporate structure and to generate value for all of our shareholders. This reorganization may include the creation of new companies and future mergers of these new companies, which are the owners of those business stakes outside of Chile. The newly-created companies would be based in Chile and listed on the same markets as the existing Enersis group of companies. These reorganizational transactions would not require any additional cash contributions and will not change current shareholdings.

If the reorganization process is eventually approved by the Boards of Directors of Enersis, Endesa Chile and Chilectra, the reorganization will be submitted for approval at their respective Shareholders' Meetings.

PART I

Item 1. Identity of Directors, Senior Management and Advisers

Not applicable.

Item 2. Offer Statistics and Expected Timetable

Not applicable.

Item 3. Key Information

A. Selected Financial Data

The following summary of consolidated financial data should be read in conjunction with our consolidated financial statements included in this Report. The selected consolidated financial data as of December 31, 2014 and 2013 and for each of the years in the three-year period ended December 31, 2014 is derived from our audited consolidated financial statements included in this Report. The selected consolidated financial data as of December 31, 2012, 2011 and 2010, and for the years ended December 31, 2011 and 2010 are derived from our consolidated financial statements not included in this Report. Since January 1, 2009, our consolidated financial statements were prepared in accordance with IFRS, as issued by the IASB.

Amounts are expressed in millions, except for ratios, operating data, shares and ADS (American Depositary Shares) data. For the convenience of the reader, all data presented in U.S. dollars in the following summary, as of and for the year ended December 31, 2014, has been converted at the U.S. dollar Observed Exchange Rate (*dólar observado*) for that date of Ch\$ 606.75 per US\$ 1.00. The Observed Exchange Rate, which is reported and published daily on the Central Bank of Chile's web page, corresponds to the weighted average exchange rate of the previous business day's transactions in the Formal Exchange Market.

For more information concerning historical exchange rates, see "— Exchange Rates" below.

The following tables set forth our selected consolidated financial data for the years indicated and the operating data of subsidiaries:

	As of and for the year ended December 31,					
	2014(1)	2014	2013	2012(2)	2011(2)	2010
	(US\$ millions)			(Ch\$ millions)

⁽¹⁾ Solely for the convenience of the reader, Chilean peso amounts have been converted into U.S. dollars at the exchange rate of Ch\$ 606.75 per U.S. dollar, as of December 31, 2014.

⁽²⁾ Restated as a result of the application of IFRS 11.

⁽³⁾ Operating expenses include selling and administration expense.

⁽⁴⁾ Includes share premium.

⁽⁵⁾ CAPEX figures represent effective payments for each year.

⁽⁶⁾ For further detail please refer to Notes 9C and 30 of the Notes to our consolidated financial statements.

The 2014 net income, net income per share and net income per ADS presented above are based on our consolidated financial statements, which were prepared in accordance with IFRS as issued by the IASB. These figures differ from the net income per share included in our statutory consolidated financial statements filed with the SVS on January 29, 2015. This is due to the fact that our statutory consolidated financial statements were prepared in accordance with the SVS guidelines and instructions, which are composed of the IFRS as issued by the IASB and supplemental instructions from the SVS, which require that the effects of the enacted Chilean tax reform on deferred taxes to be recognized in retained earnings instead of the income statement as required under IFRS. As of December 31, 2014, the only SVS instruction that conflicts with IFRS is related to the effects of the Chilean tax reform that consisted in an increase in net deferred tax liabilities. The following table set forth the main differences in net income and net income per share:

		rear ended er 31, 2014
	Net Income (Ch\$ millions)	Net Income per share (Ch\$ per share)
Consolidated Financial Statements under IFRS	571,873	11.65
Statutory Financial Statements (SVS)	610,157	12.43

The payment of dividends is based on the net income included in our Chilean statutory consolidated financial statements, which is higher than net income based on IFRS for the reasons described above.

		As of and for	the year ended De	cember 31.

Generation in Peru (GWh)	453	98	n.a	n.a.	n.a.

⁽¹⁾ Energy losses are calculated as the difference between total energy purchased (GWh of electricity demand, including own generation) and the energy sold (GWh), within a given period. Losses are expressed as a percentage of total energy purchased. Losses in distribution arise from illegally tapped energy as well as technical losses.

⁽²⁾ The 2014 data includes the capacity and generation of GasAtacama, as a result of its consolidation. Prior to 2014, GasAtacama was excluded.

⁽³⁾ Beginning in 2013, we changed how we calculate our electricity generation. The impact of applying the new criteria on a cumulative basis for 2010 through 2012 is not material. We now report the energy effectively available for sales in all countries.

⁽⁴⁾ As a result of the 2013 capital increase, Dock Sud in Argentina and EEPSA in Peru were contributed by Endesa Spain and their consolidation by Enersis began as of April 2013; therefore, 2013 data only includes the nine-month period from April 1, 2013 to December 31, 2013.

Exchange Rates

Fluctuations in the exchange rate between the Chilean peso and the U.S. dollar will affect the U.S. dollar equivalent of the peso price of our shares of common stock on the Santiago Stock Exchange (*Bolsa de Comercio de Santiago*), the Chilean Electronic Stock Exchange (*Bolsa Electrónica de Chile*) and the Valparaíso Stock Exchange (*Bolsa de Corredores de Valparaíso*). These exchange rate fluctuations will likely affect the price of our ADSs and the conversion of cash dividends relating to the common shares represented by ADSs from Chilean pesos to U.S. dollars. In addition, to the extent that significant financial liabilities of the Company are denominated in foreign currencies, exchange rate fluctuations may have a significant impact on earnings.

In Chile, there are two currency markets, the Formal Exchange Market (*Mercado Cambiario Formal*) and the Informal Exchange Market (*Mercado Cambiario Informal*). The Formal Exchange Market is comprised of banks and other entities authorized by the Central Bank of Chile. The Informal Exchange Market is comprised of entities that are not expressly authorized to operate in the Formal Exchange Market, such as certain foreign exchange houses and travel agencies, among others. The Central Bank of Chile has the authority to require that certain purchases and sales of foreign currencies be carried out on the Formal Exchange Market. Both the Formal and Informal Exchange Markets are driven by free market forces. Current regulations require that the Central Bank of Chile be informed of certain transactions and they must be carried out through the Formal Exchange Market.

The U.S. dollar Observed Exchange Rate, which is reported by the Central Bank of Chile and published daily on its web page, is the weighted average exchange rate of the previous business day's transactions in the Formal Exchange Market. Nevertheless, the Central Bank of Chile may intervene by buying or selling foreign currency on the Formal Exchange Market to attempt to maintain the Observed Exchange Rate within a desired range.

The Informal Exchange Market reflects transactions carried out at an informal exchange rate (the "Informal Exchange Rate"). There are no limits imposed on the extent to which the rate of exchange in the Informal Exchange Market can fluctuate above or below the Observed Exchange Rate. Foreign currency for payments and distributions with respect to the ADSs may be purchased either in the Formal or the Informal Exchange Market, but such payments and distributions must be remitted through the Formal Exchange Market.

The Federal Reserve Bank of New York does not report a noon buying rate for Chilean pesos. As of December 31, 2014, the U.S. dollar Observed Exchange Rate was Ch\$ 606.75 per US\$ 1.00.

The following table sets forth the low, high, average and period-end Observed Exchange Rate for U.S. dollars for the periods set forth below, as reported by the Central Bank of Chile:

	Daily Observed Exchange Rate (Ch\$ per US\$)(1)			
	Low ⁽²⁾	High ⁽²⁾	Average ⁽³⁾	Period-end
Year ended December 31,				
2014	527.53	621.41	573.70	606.75
2013	466.50	533.95	498.83	524.61
2012	469.65	519.69	486.31	479.96
2011	455.91	533.74	483.45	519.20
2010	468.01	549.17	510.38	468.01
Month ended				
March 2015	617.38	642.18	n.a.	626.58
February 2015	616.86	632.19	n.a.	618.76
January 2015	612.47	632.03	n.a.	632.03
December 2014	606.75	621.41	n.a.	606.75
November 2014	580.62	605.46	n.a.	605.46
October 2014	576.50	598.64	n.a.	576.50

- (1) Nominal figures.
- (2) Exchange rates are the actual low and high, on a day-by-day basis for each period.
- (3) The average of the exchange rates on the last day of each month during the period.

As of April 28, 2015, the U.S. dollar Observed Exchange Rate was Ch\$ 606.39 per US\$ 1.00.

Calculation of the appreciation or devaluation of the Chilean peso against the U.S. dollar in any given period is made by determining the percent change between the reciprocals of the Chilean peso equivalent of US\$ 1.00 at the end of the preceding period and the end of the period for which the calculation is being made. For example, to calculate the appreciation of the year-end Chilean peso in 2014, one determines the percent change between the reciprocal of Ch\$ 524.61 (the value of one U.S. dollar as of December 31, 2013) and the reciprocal of Ch\$ 606.75 (the value of one U.S. dollar as of December 31, 2014). In this example, the percentage change between 0.001906 (the reciprocal of Ch\$ 524.61) and 0.001648 (the reciprocal of Ch\$ 606.75) is negative 13.5%, which represents the 2014 year-end devaluation of the Chilean peso against the 2013 year-end U.S. dollar. A positive percentage change means that the Chilean peso appreciated against the U.S. dollar, while a negative percentage change means that the Chilean peso devaluated against the U.S. dollar.

The following table sets forth the period-end rates for U.S. dollars for the years ended December 31, 2010 through December 31, 2014 and through the date indicated in the table below, based on information published by the Central Bank of Chile.

	Ch	Ch\$ per US\$(1)		
	Period End	Appreciation (Devaluation)		
	(in Ch\$)	(in %)		
Year ended December 31,				
2014	606.75	(13.5)		
2013	524.61	(8.5)		
2012	479.96	8.2		
2011	519.20	(9.9)		
2010	468.01	8.4

C. Reasons for the Offer and Use of Proceeds.

Not applicable.

D. Risk Factors.

A financial or other crisis in any region worldwide can have a significant impact on the countries in which we operate, and consequently, may adversely affect our operations as well as our liquidity.

The five countries in which we operate are vulnerable to external shocks, including financial and political events, which could cause significant economic difficulties and affect their growth. If any of these economies experience lower than expected economic growth or a recession, it is likely that our customers will demand less electricity. Furthermore, some of our customers may experience difficulties paying their electric bills, possibly increasing our uncollectible accounts. Any of these situations could adversely affect our results of operations and financial condition.

Financial and political crises in other parts of the world could also adversely affect our business. For example, instability in the Middle East could result in higher fuel prices worldwide, which in turn could increase the cost of fuel for our thermal generation plants and adversely affect our results of operations and financial condition.

In addition, an international financial crisis and its disruptive effects on the financial industry could adversely impact our ability to obtain new bank financings on the same historical terms and conditions. A financial crisis could also diminish our ability to access the capital markets in the five countries in which we operate as well as the international capital markets for other sources of liquidity, or increase the interest rates available to us. Reduced liquidity could, in turn, adversely affect our capital expenditures, our long-term investments and acquisitions, our growth prospects and our dividend payout policy.

South American economic fluctuations are likely to affect our results from operations and financial condition as well as the value of our securities.

All of our operations are located in five South American countries. Accordingly, our consolidated revenues may be affected by the performance of South American economies as a whole. If local, regional, or worldwide economic trends adversely affect the economy of any of the five countries in which we have investments or operations, our financial condition and results from operations could be adversely affected. Moreover, we have investments in volatile countries, such as Argentina. Insufficient cash flows for our subsidiaries located in Argentina have, in some cases, resulted in their inability to meet debt obligations and the need to seek waivers to comply with restrictive debt covenants.

The majority of our operating income is generated in Brazil, Chile and Colombia, and 89% of our operating revenues in 2014 were derived from our operations in these countries. As a result, our financial condition and results of operations are particularly dependent on Brazilian, Chilean and Colombian economic performance. Set forth below are the GDP growths in 2014 and forecasts for 2015 for the three named countries according to the World Economic Outlook Database published in April 2015 by the International Monetary Fund ("IMF"):

- In 2014, Brazilian GDP increased by 0.1% compared to a 2.3% increase in 2013. In 2015, Brazilian GDP is forecast to grow by 1.4%.
- In 2014, Chilean GDP increased by 1.8% compared to a 4.2% increase in 2013. In 2015, Chilean GDP is forecast to grow by 3.3%.
- In 2014, Colombian GDP increased by 4.6% compared to a 4.7% increase in 2013. In 2015, Colombian GDP is forecast to grow by 4.5%.

Future adverse developments in these economies may impair our ability to execute our strategic plans, which could adversely affect our results of operations and financial condition.

In addition, South American financial and securities markets are, to varying degrees, influenced by economic and market conditions in other countries. Brazilian, Chilean and Colombian financial and securities markets may be adversely affected by events in other countries, which could adversely affect the value of our securities.

A deterioration of the economic situation in Argentina or a deeper devaluation of the Argentine peso could have an adverse effect on our debt.

The Argentine peso suffered a steep devaluation against the U.S. dollar during 2014. Due to the decline in value of the Argentine peso relative to foreign currencies, the Argentine government has implemented policies to limit purchases of U.S. dollars. The Argentine Central Bank raised the reference interest rate, which increased financing costs for banks and for private sector companies. Although the pace of the devaluation of the Argentine peso against the U.S. dollar has slowed recently, the increase in interest paid on deposits has been insufficient to offset the inflation rate. The devaluation of the Argentine peso may continue in 2015 and future years.

If Argentina's economy were deemed hyperinflationary, a general price index would be used to present the amounts related to our Argentine subsidiaries in our consolidated financial statements under the provisions outlined in IAS 29, "Financial Reporting in Hyperinflationary Economies." Amounts for the previous reporting periods would be restated by applying the general price index so that the financial statements between the periods presented would be comparative.

In 2014, the Argentine banking industry increased interest rates on loans and shortened maturities. Liquidity in the Argentine derivatives market also deteriorated, which limited access to swaps of Argentine peso-denominated debt into other currencies. As a result, our Argentine peso-denominated debt is exposed to further devaluation of the Argentine peso.

Argentina's sovereign creditworthiness also deteriorated in 2014, based on market data and reports from credit ratings agencies. The insurance cost of sovereign bonds, as measured by credit default swaps, increased to 29.9% from 16.5% during 2014, which indicates increased probability of a distressed credit event. Argentina's sovereign debt rating was downgraded from "CCC" to "selective default" by Standard & Poor's and from "CC" to "restricted default" by Fitch, after a default on Argentina's sovereign bonds in July 2014. Moody's maintained the long term foreign currency debt rating at "Ca," but with negative outlook. Further deterioration of Argentina's economy could adversely affect our results of operations and financial condition.

For further information on our consolidated financial statements by country, please see Note 35.3 of the Notes to our consolidated financial statements.

Certain South American countries have been historically characterized by frequent and occasionally drastic economic interventionist measures by governmental authorities, including expropriations, which may adversely affect our business and financial results.

Governmental authorities have altered monetary, credit, tariff, tax and other policies to influence the course of the economies of Argentina, Brazil, Colombia and Peru. To a lesser extent, the Chilean government has also exercised and continues to exercise a substantial influence over many aspects of the private sector, which may result in changes to economic or other policies. For example, in September 2014, the Chilean government approved the progressive increase of the corporate income tax and a change in the tax system, which may have an additional negative effect upon non-Chilean holders of shares or ADSs. In addition, taxes may be due on accrued dividends prior to their payments depending on the tax mechanism elected. Governmental actions in these South American countries have also involved wage, price and tariff rate controls and other interventionist measures, such as expropriation or nationalization. For example, Argentina froze bank accounts and imposed capital restrictions in 2001, nationalized the private sector pension funds in 2008, used its Central Bank reserves to pay down indebtedness maturing in 2010, expropriated Repsol's 51% stake in YPF in 2012 and imposed exchange controls in 2014, which limited Argentine access to foreign currencies. In 2010, Colombia imposed an equity tax to finance reconstruction and repair efforts related to severe flooding, which resulted in an extraordinary tax expense accrual booked in January 2011 for taxes payable in 2011 through 2014.

Changes in the policies of these governmental and monetary authorities with respect to tariffs, exchange controls, regulations and taxation could reduce our profitability. Inflation, devaluation, social instability and other political, economic or diplomatic developments, including the response by governments in the region to these circumstances, could also reduce our profitability. Any of these scenarios could adversely affect our results of operations and financial condition.

Our electricity business is subject to risks arising from natural disasters, catastrophic accidents and acts of terrorism, which could adversely affect our operations, earnings and cash flow.

Our primary facilities include power plants, transmission and distribution assets, pipelines, liquefied natural gas ("LNG") terminals and re-gasification plants, storage and chartered LNG tankers. Our facilities may be damaged by earthquakes, flooding, fires, and other catastrophic disasters arising from natural or accidental human causes, as well as acts of terrorism. A catastrophic event could cause disruptions in our business, significant decreases in revenues due to lower demand or significant additional costs to us not covered by our business interruption insurance. There may be lags between a major accident or catastrophic event and the final reimbursement from our insurance policies, which typically carry a deductible and are subject to per event policy maximums.

As an example, on February 27, 2010, Chile experienced a major earthquake in the Bío-Bío region, with a magnitude of 8.8 on the Richter scale, followed by a very destructive tsunami. Our Bocamina I and Bocamina II thermal generation units, which are located near the epicenter, sustained significant damage as a result of the earthquake.

We are subject to financing risks, such as those associated with funding our new projects and capital expenditures, and risks related to refinancing our maturing debt; we are also subject to debt covenant compliance, all of which could adversely affect our liquidity.

As of December 31, 2014, our debt totaled Ch\$ 3,711 billion.

Our debt had the following maturity profile:

- Ch\$ 422 billion in 2015;
- Ch\$ 972 billion from 2016 to 2017;
- Ch\$ 643 billion from 2018 to 2019; and
- Ch\$ 1,674 billion thereafter.

Set forth below is a breakdown by country for debt maturing in 2015:

- Ch\$ 151 billion for Chile;
- Ch\$ 93 billion for Colombia
- Ch\$ 79 billion for Brazil;
- Ch\$ 63 billion for Peru; and
- Ch\$ 36 billion for Argentina.

Some of our debt agreements are subject to (1) financial covenants, (2) affirmative and negative covenants, (3) events of default, (4) mandatory prepayments for contractual breaches, and (5) certain change of control clauses for material mergers and divestments, among other provisions. A significant portion of our financial indebtedness is subject to cross default provisions, which have varying definitions, criteria, materiality thresholds and applicability with respect to subsidiaries that could give rise to such a cross default.

In the event that we or our subsidiaries breach any of these material contractual provisions, our creditors and bond holders may demand immediate repayment, and a significant portion of our indebtedness could become due and payable. For example, as of December 31, 2014 and March 31, 2015, our Argentine subsidiary El Chocón did not meet an interest coverage ratio test (EBITDA to interest expense) pursuant to a covenant requirement under a loan agreement with Standard Bank, Deutsche Bank and Itaú that matures in February 2016. El Chocón has experienced difficulties in meeting this covenant several times in the past and has obtained waivers from its lenders. As of the date of this Report, we are in discussions with the lenders but El Chocón has not received any waivers or acceleration notices for its most recent failure to comply with the ratio. If the lenders decide to declare an event of default and accelerate the loan, US\$ 15 million of principal and interest would become immediately due and payable under this facility. Because of cross-acceleration provisions of El Chocón's other loans, an additional Ch\$ 21 billion would also be accelerated and El Chocón would be required to enter into bankruptcy.

We may be unable to refinance our indebtedness or obtain such refinancing on terms acceptable to us. In the absence of such refinancing, we could be forced to dispose of assets in order to make the payments due on our indebtedness under circumstances that might not be favorable to obtaining the best price for such assets. Furthermore, we may be unable to sell our assets quickly enough, or at sufficiently high prices, to enable us to make such payments.

We may also be unable to raise the necessary funds required to finish our projects under development or under construction. Market conditions prevailing at the moment we require these funds or other unforeseen project costs can compromise our ability to finance these projects and expenditures.

As of the date of this Report, we believe that Argentina continues to be the country in which we operate with the highest refinancing risk. As of December 31, 2014, the third-party debt of our Argentine subsidiaries amounted to Ch\$ 80 billion. As long as fundamental issues concerning the local electricity sector remain unresolved, we will roll over our outstanding Argentine debt to the extent we are able to do so. If our creditors will not continue to roll over our debt when it becomes due and we are unable to refinance such obligations, we could default on such indebtedness.

Our inability to finance new projects or capital expenditures or to refinance our existing debt could adversely affect our results of operation and financial condition.

We may be unable to enter into suitable investments, alliances and acquisitions.

On an ongoing basis, we review acquisition prospects that may increase our market coverage or supplement our existing businesses, though there can be no assurance that we will be able to identify and consummate suitable acquisition transactions in the future. The acquisition and integration of independent companies that we do not control is generally a complex, costly and time-consuming process and requires significant efforts and expenditures. If we consummate an acquisition, it could result in the incurrence of substantial debt and assumption of unknown liabilities, the potential loss of key employees, amortization expenses related to tangible assets and the diversion of management's attention from other business concerns. In addition, any delays or difficulties encountered in connection with acquisitions and the integration of multiple operations could have a material adverse effect on our business, financial condition or results of operations.

Because our generation business depends heavily on hydrological conditions, droughts and climate change may adversely affect our operations and profitability.

Approximately 52% of our consolidated installed generation capacity in 2014 was hydroelectric. Accordingly, extreme hydrological conditions and climate change could adversely affect our business, results of operations and financial condition. In the last few years, regional hydrological conditions have been affected by two climatic phenomena — El Niño and La Niña — that influence rainfall regularity and resulted in droughts. For example, in Brazil, where 67% of our installed capacity is hydroelectric, the ongoing drought since 2013 has adversely affected the systems operation, forcing a high thermal dispatch. This increased spot prices to their upper limits, inducing regulatory changes and vulnerable operating conditions.

In addition, the ongoing drought in Chile not only reduced our ability to operate our hydroelectric plants at full capacity, but also resulted in increased number of disputes with both the Chilean government and local farmers over water use. As a result of such disputes, Endesa Chile has entered into agreements with both the Chilean government and the farmers that further restrict its ability to use water for hydroelectric generation. If drought conditions persist or become worse, both Endesa Chile and us may face increased pressure by the Chilean government or other third parties to further restrict our water use.

Droughts also affect the operation of our thermal plants, including our facilities that use natural gas, fuel oil or coal as fuel, in the following manner:

- During periods of drought, thermal plants are used more frequently. Operating costs of thermal plants can be considerably
 higher than those of hydroelectric plants. Our operating expenses increase during these periods. In addition depending on
 our commercial obligations, we may have to buy electricity at spot prices in order to meet our contractual supply
 obligations and the cost of these electricity purchases may exceed the price at which we sell contracted electricity, thus
 producing losses from those contracts.
- Our thermal plants require water for cooling and the drought in Chile not only reduces the availability of water, but also increases the concentration of chemicals, such as sulfates in the water. The high concentration of chemicals in the water we use for cooling increases the risk of damaging the equipment at our thermal plants as well as the risk of violating relevant environmental regulations. As a result, we had to purchase water from agricultural areas that are also experiencing shortages of water. These water purchases may increase our operating costs and also imply additional costs to manage our social responsibility commitments.
- Thermal power plants burning gas generate emissions such as sulfur dioxide (SO₂) and nitrogen oxide (NO_x) gases. When operating with diesel they also release particulate matter into the atmosphere. Coal fired plants generate emissions of SO₂ and NO₂. Therefore, greater use of thermal plants during periods of drought increases the risk of unsatisfactory performance of the abatement equipment used to control pollutant emissions.

In addition, according to certain weather forecast models, the drought that is affecting the regions where most of our Chilean hydroelectric plants are located may last for an extended period in the future as a result of climate change. A prolonged drought will exacerbate the risks described above and have a further negative impact upon our business, results of operations and financial condition.

Governmental regulations may adversely affect our business.

We are subject to extensive regulation of the tariffs we charge our customers and other aspects of our business and these regulations may adversely affect our profitability. For example, the Chilean government can impose electricity rationing during droughts or prolonged failures of power facilities. During rationing, if we are unable to generate enough electricity to comply with our contractual obligations, we may be forced to buy electricity at the spot price, as even a severe drought does not release us from our contractual obligations as a *force majeure* event. The spot price may be significantly higher than our costs to generate the electricity and can be as high as the "cost of failure" set by the Chilean National Energy Commission (*Comisión Nacional de Energía* or "CNE"). This "cost of failure," which is updated semiannually by the CNE, is a measurement of how much final users would pay for one extra MWh under rationing conditions. If we are unable to buy enough electricity at the spot price to comply with our contractual obligations, we would have to compensate our regulated customers for the electricity we failed to provide at the rationed price. Rationing periods have occurred in the past and may occur in the future. Our generation subsidiaries may be required to pay regulatory penalties if they fail to provide adequate service under their contractual obligations. Material rationing policies imposed by regulatory authorities in any of the countries in which we operate could adversely affect our business, results of operations and financial condition.

Governmental authorities may also delay the distribution tariff review process, or tariff adjustments determined by governmental authorities may be insufficient to pass through our costs (as has been the case with Edesur, our Argentine distribution subsidiary and with Ampla and Coelce, our Brazilian distribution subsidiaries, for part of 2014). Similarly, electricity regulations issued by governmental authorities in the countries in which we operate may affect the ability of our generation companies to collect revenues sufficient to offset their operating costs, which has been the case with Costanera and Dock Sud in Argentina.

The inability of any company in our consolidated group to collect revenues sufficient to cover operating costs may affect the ability of that company to operate as a going concern and may otherwise have an adverse effect on our business, assets, financial results and operations.

In addition, changes in the regulatory framework are often submitted to the legislators and administrative authorities in the countries in which we operate and, if approved, could have a material adverse impact on our business. For instance, in 2005 there was a change in the water rights' law in Chile that requires us to pay for unused water rights. In addition, the Chilean government is initiating a review of the current energy policies through an energy agenda presented in May 2014. These changes could adversely affect our results.

Our business and profitability could be adversely affected if water rights are denied or if water concessions are granted with limited duration.

Approximately 55% of our installed capacity in Chile is hydroelectric. We own water rights granted by the Chilean Water Authority (*Dirección General de Aguas* or "DGA") for the supply of water from rivers and lakes near our production facilities. Under current law, these water rights are (i) for unlimited duration, (ii) absolute and unconditional property rights and (iii) not subject to further challenge. Chilean generation companies must pay an annual license fee for unused water rights. New hydroelectric facilities are required to obtain water rights, the conditions of which may impact design, timing or profitability of a project.

For example, the HidroAysén hydroelectric project's environmental impact assessment study was approved by the environmental authority in May 2011, and was subsequently rejected. The study demonstrated that the design of the project and the use of the waters flows from both the Baker and Pascua Rivers could be optimized. To achieve this optimization, greater volumes of water from both rivers were necessary and we requested additional water rights. In January 2015, the Chilean Water Authority denied approximately 92% of the additional volumes of water requested in the Baker River basin and approximately 70% of those requested in the Pascua River basin. The project now requires a new design, which may result in significant delays and increased costs. As a result of this and other complications, Endesa Chile recorded an impairment loss of Ch\$ 69,067 million in connection with HidroAysén in the fourth quarter of 2014.

In addition, Chilean Congress is currently discussing amendments to the Water Code. Under the proposal: (i) water use concessions would be limited to 30 years, which would be extendable with respect to water rights actually used during the 30-year period, unless the Chilean Water Authority demonstrates the water rights have not been used effectively; (ii) new non-consumptive water rights would expire if the holder does not exercise the rights within eight years; and (iii) existing non-consumptive water rights and have not been used would expire within 14 years from the date of being granted. For the rights granted before 2006, January 1, 2006 will be deemed the grant date.

Any limitations on our current water rights, our need for additional water rights, or our current unlimited duration of water concessions could have a material adverse effect on our hydroelectric development projects and our profitability.

Regulatory authorities may impose fines on our subsidiaries, which could adversely affect our results of operations and financial condition.

Our electricity businesses may be subject to regulatory fines for any breach of current regulations, including energy supply failures, in the five countries in which we operate. In Chile, such fines may be imposed for a maximum of 10,000 Annual Tax Units (*Unidades Tributarias Anuales* or "UTA"), or Ch\$ 5.2 billion using the UTA and foreign exchange rate as of December 31, 2014. In Peru, fines may be imposed for a maximum of 1,400 Treasury Tax Units (*Unidad Impositiva Tributaria* or "UIT"), or Ch\$ 1,080 million, using the UIT and foreign exchange rates as of December 31, 2014. In Colombia, fines may be imposed for a maximum of 2,000 Minimum Monthly Salaries (*Salarios Mínimos Mensuales*), or Ch\$ 312 million using the Minimum Monthly Salary and the exchange rates as of December 31, 2014. In Argentina, there is no maximum limit for relevant fines. In Brazil, fines may be imposed for up to 2.0% of an electricity company's revenues.

Our electricity generation subsidiaries are supervised by their local regulatory entities and may be subject to these fines in cases where, in the opinion of the regulatory entity, operational failures affecting the regular energy supply to the system are the fault of the company such as when agents are not coordinated with the system operator. In addition, our subsidiaries may be required to pay fines or compensate customers if those subsidiaries are unable to deliver electricity, even if such failure is due to forces outside of the subsidiaries' control.

For example, in 2014, ANEEL imposed fines of Ch\$ 5 billion on Ampla and Ch\$ 6.4 billion on Coelce due to technical and commercial operation failures. In 2014, the Electricity National Regulatory Agency ("ENRE" in its Spanish acronym) imposed fines on Edesur for a total of Ch\$ 7.6 billion and additional compensation to customers of Ch\$ 27.6 billion. In 2011, the Chilean Superintendency of Electricity and Fuels (Superintendencia de Electricidad y Combustibles or "SEF") imposed 1,947 UTA (approximately Ch\$ 1,023 million) in fines on Endesa Chile, Pehuenche and Chilectra due to a blackout that occurred in the Santiago metropolitan region in March 2010. For further information on fines, please refer to Note 38 of the Notes to our consolidated financial statements.

We depend in part on payments from our subsidiaries, jointly-controlled entities and associates to meet our payment obligations.

In order to pay our obligations, we rely partly on cash from dividends, loans, interest payments, capital reductions and other distributions from our subsidiaries and equity affiliates. The ability of our subsidiaries and equity affiliates to pay dividends, interest payments, loans and other distributions to us is subject to legal constraints such as dividend restrictions, fiduciary duties, contractual limitations and foreign exchange controls that may be imposed in any of the five countries where they operate.

Historically, we have been able to access the cash flows of our Chilean subsidiaries, but we have not been similarly able to access at all times the cash flows of our non-Chilean operating subsidiaries due to government regulations, strategic considerations, economic conditions and credit restrictions.

Our future results from operations outside Chile may continue to be subject to greater economic and political uncertainties than what we have experienced in Chile, thereby reducing the likelihood that we will be able to rely on cash flows from operations in those entities to repay our debt

Dividend Limits and Other Legal Restrictions. Some of our non-Chilean subsidiaries are subject to legal reserve requirements and other restrictions on dividend payments. Other legal restrictions, such as foreign currency controls, may limit the ability of our non-Chilean subsidiaries and equity affiliates to pay dividends and make loan payments or other distributions to us. In addition, the ability of any of our subsidiaries that are not wholly-owned to distribute cash to us may be limited by the fiduciary duties of the directors of such subsidiaries to their minority shareholders. Furthermore, some of our subsidiaries may be forced by local authorities, in accordance with applicable regulation, to diminish or eliminate dividend payments. As a consequence of such restrictions, our subsidiaries could, under certain circumstances, be prevented from distributing cash to us.

Contractual Constraints. Distribution restrictions included in certain credit agreements of our subsidiaries Costanera and El Chocón may prevent dividends and other distributions to shareholders if they are not in compliance with certain financial ratios. Generally, our credit agreements prohibit any type of distribution if there is an ongoing default.

Operating Results of Our Subsidiaries. The ability of our subsidiaries and equity affiliates to pay dividends or make loan payments or other distributions to us is limited by their operating results. To the extent that the cash requirements of any of our subsidiaries exceed their available cash, the subsidiary will not be able to make cash available to us.

Any of the situations described above could adversely affect our results of operations and financial condition.

Foreign exchange risks may adversely affect our results and the U.S. dollar value of dividends payable to ADS holders.

The currencies of South American countries in which we and our subsidiaries operate have been subject to large devaluations and appreciations against the U.S. dollar and may be subject to significant fluctuations in the future. Historically, a significant portion of our consolidated indebtedness has been denominated in U.S. dollars. Although a substantial portion of our operating cash flows is linked to U.S. dollars, we generally have been and will continue to be materially exposed to currency fluctuations of our local currencies against the U.S. dollar because of time lags and other limitations to peg our tariffs to the U.S. dollar.

In countries where operating cash flows are denominated in the local currency, we seek to maintain debt in the same currency, but due to market conditions it may not be possible to do so.

Because of this exposure, the cash generated by our subsidiaries can decrease substantially when local currencies devalue against the U.S. dollar. Future volatility in the exchange rate of the currencies in which we receive revenues or incur expenditures may affect our financial condition and results from operations.

As of December 31, 2014, the amount of our total consolidated debt was Ch\$ 3,711 billion (net of currency hedging instruments). Of this amount, Ch\$ 1,104 billion, or 30%, was denominated in U.S. dollars and Ch\$ 340 billion, or 9% was denominated in Chilean pesos. As of December 31, 2014, our consolidated foreign currency-denominated indebtedness (other than U.S. dollars or Chilean pesos) included the equivalent of:

- Ch\$ 1,255 billion in Colombian pesos;
- Ch\$ 705 billion in Brazilian reais;
- Ch\$ 271 billion in Peruvian soles; and
- Ch\$ 36 billion in Argentine pesos.

These amounts total Ch\$ 2,267 billion in currencies other than U.S. dollars or Chilean pesos.

For the twelve-month period ended December 31, 2014, our operating cash flows were Ch\$ 1,705 billion (before consolidation adjustments) of which:

- Ch\$ 583 billion, or 34%, came from Colombia;
- Ch\$ 413 billion, or 24%, came from Brazil;
- Ch\$ 267 billion, or 16%, came from Argentina;
- Ch\$ 239 billion, or 14%, came from Peru; and
- Ch\$ 203 billion, or 12%, came from Chile.

We are involved in litigation proceedings.

We are currently involved in various litigation proceedings, which could result in unfavorable decisions or financial penalties against us. We will continue to be subject to future litigation proceedings, which could cause material adverse consequences to our business.

For example, in August 2014, the Chilean Superintendency of Environment fined Endesa Chile 8,640 UTAs (approximately Ch\$ 4.5 billion) for alleged environmental violations related to the Bocamina II power plant. Endesa Chile appealed the fine, though a provision for this fine was included in our consolidated financial statements. Our financial condition or results from operations could be adversely affected if we are unsuccessful in defending this litigation or other lawsuits and proceedings against us. For further information on litigation proceedings, please see Note 36.3 of the Notes to our consolidated financial statements.

The values of our generation subsidiaries' long-term energy supply contracts are subject to fluctuations in the market prices of certain commodities and other factors.

We have economic exposure to fluctuations in the market prices of certain commodities as a result of the long-term energy sales contracts into which we have entered. We and our subsidiaries have material obligations as selling parties under long-term fixed-price electricity sales contracts. Prices in these contracts are indexed according to different commodities, the exchange rate, inflation, and the market price of electricity. Adverse changes to these indices would reduce the rates we charge under our long-term fixed-price electricity sales contracts, which could adversely affect our results of operations and financial condition.

Our controlling shareholders may have conflicts of interest relating to our business.

Enel beneficially owns 60.6% of our share capital. Our controlling shareholder has the power to determine the outcome of most material matters that require shareholders' votes, such as the election of the majority of our board members and, subject to contractual and legal restrictions, the distribution of dividends. Enel also can exercise influence over our business strategy and operations. Its interests may in some cases differ from those of the other shareholders. Enel conducts its business operations in the field of renewable energies in South America through Enel Green Power S.p.A., in which we do not have an equity interest.

Environmental regulations in the countries in which we operate and other factors may cause delays, impede the development of new projects or increase the costs of operations and capital expenditures.

Our operating subsidiaries are subject to environmental regulations which, among other things, require us to perform environmental impact studies for future projects and obtain permits from both local and national regulators. The approval of these environmental impact studies may take longer than planned and may be withheld by governmental authorities. Local communities and ethnic and environmental activists, among others, may intervene in the approval process to delay or prevent a project's development. They may also seek injunctive or other relief, which could negatively impact us if they are successful.

Environmental regulations for existing and future generation capacity may become stricter, requiring increased capital investments. For example, Decree 13 of the Chilean Ministry of the Environment promulgated in January 2011 and published in June 2011 defined stricter emission standards for thermoelectric plants that must be met between 2014 and 2016 and stricter standards for new facilities or additional capacity. This regulation also requires the establishment of a system of continuous emission monitoring, pursuant to which thermoelectric plants must implement a monitoring system in accordance with the guidelines and protocols issued by the Chilean Superintendency of the Environment. Failure to certify the implementation of such monitoring system may result in penalties and sanctions. In September 2014, the Chilean government enacted Law 20,780 (a tax reform law), which established an annual tax on stationary power generators, such as thermal generators, tied to their emission of pollutants for the previous year. When this provision of the law enters into force in 2018, it will only apply to generators with a capacity of at least 50 MW.

In compliance with these Chilean environmental regulations, all Chilean thermal plants are expected to invest to comply with the new regulations by installing abatement systems to control pollutant emissions. Any delay in the filing may constitute a violation of the regulations which established emission limits effective on June 23, 2015 or June 23, 2016 depending on the plant's location.

In 2009, we presented our 740 MW coal-fueled Punta Alcalde project for environmental approval in Chile. In 2012, the regional environmental authority rejected the project and we appealed to the Council of Ministers. The Council unanimously reversed the decision of the environmental authority, and issued an environmental qualification resolution ("RCA" in its Spanish acronym) in December 2012. However, the Court of Appeals accepted four injunctions against us in early 2013. In January 2014, the Chilean Supreme Court ruled that the project could proceed but imposed several conditions in the RCA, including steps to improve air quality in the nearby town of Huasco. In addition, the Chilean Supreme Court requested certain environmental evaluations (including an evaluation for the transmission line). In light of the changes requested by the Chilean Supreme Court, we concluded that major modifications to the approved RCA were needed in order to make the Punta Alcalde project economically sustainable. On January 29, 2015, we halted development of the project and the related transmission project. We recorded a Ch\$ 12,582 million impairment loss in connection with the Punta Alcalde project in the fourth quarter of 2014.

In addition to environmental matters, there are other factors that may adversely affect our ability to build new facilities or to complete projects currently under development on time, including delays in obtaining regulatory approvals, shortages or increases in the price of equipment, materials or labor, strikes, adverse weather conditions, natural disasters, civil unrest, accidents, or other unforeseen events. Any such event could adversely impact our results of operations and financial condition.

Delays or modifications to any proposed project and laws or regulations may change or be interpreted in a manner that could adversely affect our operations or our plans for companies in which we hold investments, which could adversely affect our results of operations and financial condition.

Our business may be adversely affected by judicial decisions on environmental qualification resolutions for electricity projects in Chile.

The amount of time necessary to obtain an environmental qualification resolution for electricity generation or transmission projects in Chile has materially increased, primarily due to judicial decisions against such projects, environmental opposition, social criticism and government delays. This can cast doubt on the ability of a project to obtain such approval and increase the uncertainty for investing in electricity generation and transmission projects in Chile. The uncertainty is forcing companies to reassess their business strategies as the delay in the construction of electricity generation and transmission projects may result in a supply constraints over the next five or six years. If any plant within the system ceases operation unexpectedly, we could experience supply shortages in our system, which could lead to power cuts. Any such event could adversely affect our results of operations and financial condition.

Our power plant projects may encounter significant opposition from different groups that may delay their development, increase costs, damage our reputation and potentially result in impairment of our goodwill with stakeholders.

Our reputation is the foundation of our relationship with key stakeholders and other constituencies. If we are unable to effectively manage real or perceived issues that could negatively impact sentiments toward us, our results of operations and financial condition could be adversely affected.

The development of new and existing power plants may face opposition from several stakeholders, such as ethnic groups, environmental groups, land owners, farmers, local communities and political parties, among others, all of which may impact the sponsoring company's reputation and goodwill. For example, since December 2013, our Bocamina II power plant has encountered substantial opposition from local fishermen's unions that who claim that our facility negatively affects marine life and causes pollution, which resulted in the temporary shutdown of the power plant. Even though the Chilean Supreme Court lifted the injunction, the power plant has remained offline pending a new environmental qualification resolution, which we now have, as a direct consequence of the claim. Such groups are sometimes financed internationally and may receive global attention. Similarly, the El Quimbo hydroelectric project in Colombia faced constant demands from the public that have delayed construction and increased costs. From April 27, 2014 to May 12, 2014, a national agricultural strike involving communities near the project blocked roads and occupied neighboring land. Additional protests during 2014 blocked the entrance to the Balseadero viaduct construction site and the reservoir basin.

The operation of our current thermal power plants may also affect our goodwill with stakeholders, due to emissions such as particulate matter, sulfur dioxide and nitrogen oxides, which could adversely affect the environment.

Damage to our reputation may exert considerable pressure on regulators, creditors, and other stakeholders and ultimately lead to projects and operations that may not be optimal, causing our share prices to drop and hindering our ability to attract or retain valuable employees, all of which could result in an impairment of our goodwill with stakeholders.

We may be exposed to asbestos liability and additional expense related to asbestos.

Several of our facilities have asbestos present in them. We have a policy regarding asbestos control and sanitation, which includes a detailed action plan regarding the detecting the presence of asbestos, measuring air quality, ensuring the compliance with safety requirements, as well as a plan to monitor the health of workers.

In April 2015, Endesa Chile completed the removal of the identifiable asbestos from the Bocamina I power plant.

We may incur additional costs to remediate and implement our asbestos control and sanitation policy, or be subject to legal actions against us, which in turn may have a material adverse effect on our business, results of operation and financial condition.

Our business may experience adverse consequences if we are unable to reach satisfactory collective bargaining agreements with our unionized employees.

A large percentage of our employees are members of unions and have collective bargaining agreements that must be renewed on a regular basis. Our business, financial condition and results of operations could be adversely affected by a failure to reach agreement with any labor union representing such employees or by an agreement with a labor union that contains terms we view as unfavorable. The laws of many of the countries in which we operate provide legal mechanisms for judicial authorities to impose a collective agreement if the parties are unable to come to an agreement, which may increase our costs beyond what we have budgeted.

In addition, we employ many highly-specialized employees, and certain actions such as strikes, walk-outs or work stoppages by these employees, could negatively impact our operating and financial performance as well as our reputation.

Interruption or failure of our information technology and communications systems or external attacks to or breaches of these systems could have an adverse effect on our operations and results.

We depend on information technology, communication and processing systems ("IT Systems") to operate our businesses, the failure of which could adversely affect our financial condition and results of operations.

IT Systems are all vital to our generation subsidiaries' ability to monitor our power plants' operations, maintain generation and network performance, adequately generate invoices to customers, achieve operating efficiencies and meet our service targets and standards. Our distribution subsidiaries could also be affected adversely because they rely heavily on IT Systems to monitor their grids, billing processes for millions of customers and customer service platforms. Temporary or long-lasting operational failures of any of these IT Systems could have a material adverse effect on our results of operations. Additionally, cyber attacks can have an adverse effect on the company's image and its relationship with the community.

In the last few years, global cyber attacks on security systems, treasury operations, and IT Systems have intensified. We are exposed to cyber-terrorist attacks aimed at damaging our assets through computer networks, cyber spying involving strategic information that may be beneficial for third parties and cyber-theft of proprietary and confidential information, including information of our customers. During 2014, we suffered two cyber attacks perpetrated by a cyber-terrorist group, which impacted websites in Chile, Argentina, Brazil, Colombia and Peru. In one case, the attack resulted in a service interruption of 90 minutes.

We rely on electricity transmission facilities that we do not own or control. If these facilities do not provide us with an adequate transmission service, we may not be able to deliver the power we sell to our final customers.

We depend on transmission facilities owned and operated by other unaffiliated power companies to deliver the electricity we sell. This dependence exposes us to several risks. If transmission is disrupted, or transmission capacity is inadequate, we may be unable to sell and deliver our electricity. If a region's power transmission infrastructure is inadequate, our recovery of sales costs and profits may be insufficient. If restrictive transmission price regulation is imposed, transmission companies upon whom we rely may not have sufficient incentives to invest in expansion of their transmission infrastructure, which could adversely affect our operations and financial results. Currently, the construction of new transmission lines is taking longer than in the past, mainly because of new social and environmental requirements that are creating uncertainty about the probability of completing the projects. In addition, the increase of new non-conventional renewable energy ("NCRE") projects is congesting the current transmission system as these projects can be built relatively quickly, while new transmission projects can take as long as seven years to be built.

On September 24, 2011, nearly 10 million people located in central Chile experienced a blackout (affecting more than half of all Chileans), due to the failure of Transelec's 220 kV Ancoa substation. The failure led to the disruption of two 500 kV transmission lines in the Chilean Central Interconnected System ("SIC" in its Spanish acronym) and the subsequent failure of the remote recovery computer software used by the independent entity that coordinates generators, transmission companies and large customers ("CDEC" in its Spanish acronym) to operate the grid. This blackout, which lasted two hours, exposed weaknesses in the transmission grid and its need for expansion and technological improvements to increase the reliability of the transmission grid.

Any such disruption or failure of transmission facilities could interrupt our business, which could adversely affect our results of operations and financial condition.

The relative illiquidity and volatility of Chilean securities markets could adversely affect the price of our common stock and ADS.

Chilean securities markets are substantially smaller and less liquid than the major securities markets in the United States. In addition, Chilean securities markets may be affected materially by developments in other emerging markets. The low liquidity of the Chilean market may impair the ability of holders of ADS to sell shares of our common stock withdrawn from the ADS program into the Chilean market in the amount and at the price and time they wish to do so.

Lawsuits against us brought outside of the South American countries in which we operate or complaints against us based on foreign legal concepts may be unsuccessful.

All of our assets are located outside of the United States. All of our directors except one and all of our officers reside outside of the United States and most of their assets are located outside the United States as well. If any investor were to bring a lawsuit against our directors, officers or experts in the United States, it may be difficult for them to effect service of legal process within the United States upon these persons, or to enforce against them, in United States or Chilean courts, judgments obtained in United States courts based upon the civil liability provisions of the federal securities laws of the United States. In addition, there is doubt as to whether an action could be brought successfully in Chile on the basis of liability based solely upon the civil liability provisions of the United States federal securities laws.

Item 4. Information on the Company

A. History and Development of the Company.

History

Enersis S.A. is a publicly held limited liability stock corporation organized under the laws of the Republic of Chile on June 19, 1981. Since January 1983, we have been registered in Santiago with the SVS under Registration No. 0175.

Our contact information in Chile is:

Street Address: Santa Rosa 76, Santiago, Código Postal 8330099, Chile

Telephone: (56-2) 2353-4639 Web site: <u>www.enersis.cl</u>

We are an electricity utility company engaged, through our subsidiaries and affiliates, in the generation, transmission and distribution of electricity businesses in Chile, Argentina, Brazil, Colombia, and Peru.

Since June 2009, our controlling shareholder has been Enel, which holds beneficial ownership of 60.6% of our shares. Enel is an international energy company operating worldwide in the power and gas markets, with a focus on Europe and Latin America. Enel operates in 32 countries across four continents, with over 95 GW of net installed capacity and distributes electricity and gas through a network covering approximately 1.9 million km. Enel has 61 million customers worldwide.

We are one of the largest publicly listed companies in the electricity sector in South America. We trace our origins to Compañía Chilena de Electricidad Ltda. ("CCE"), which was formed in 1921 as a result of the merger of Chilean Electric Tramway and Light Co., founded in 1889, and Compañía Nacional de Fuerza Eléctrica ("CONAFE"), with operations dating back to 1919. In 1970, the Chilean government nationalized CCE. During the 1980s, the sector was reorganized through the Chilean Electricity Law, known as the Decree with Force of Law Number 1 of 1982 ("DFL 1"), CCE's operations were divided into one generation company, the current AES Gener S.A. ("Gener"), a currently unrelated company, and two distribution companies, one with a concession in the Valparaíso Region, the current Chilquinta S.A., a currently unrelated company, and the other with a concession in the Santiago metropolitan region, Compañía Chilena Metropolitana de Distribución Eléctrica S.A. From 1982 to 1987, the Chilean electric utility sector went through a process of re-privatization. In August 1988, Compañía Chilena Metropolitana de Distribución Eléctrica S.A. changed its name to Enersis S.A. and became the new parent company of Distribuidora Chilectra Metropolitana S.A., later renamed Chilectra S.A. In the 1990s, we diversified into electricity generation and transmission through our increasing equity stakes in Endesa Chile.

We began our international operations in 1992 with our investment in Edesur, an Argentine electricity distribution company. That same year, Endesa Chile, which at that time was an affiliated company, also started its international operations with its investment in Costanera, an Argentine electricity generation company. We then expanded primarily into electricity generation, transmission and distribution businesses in four South American countries: Argentina, Brazil, Colombia and Peru. We remain focused on the electricity sector, although we have small operations in other businesses that represent less than 1.0% of our consolidated assets, in the aggregate.

In 2005, Enel Brasil was formed to manage all generation, transmission and distribution assets that Endesa Latinoamérica, Enersis, Endesa Chile and Chilectra held in Brazil; namely, Ampla, Fortaleza, CIEN, Cachoeira Dourada and Coelce. As of December 31, 2014, Enersis had an 84.4% beneficial economic interest in Enel Brasil.

In order to achieve synergies in Peru, in 2006, we merged Edegel and Empresa de Generación Termoeléctrica Ventanilla S.A., a Peruvian generation company that was owned by Endesa Spain at the time, creating a 457 MW thermoelectric generation company.

In September 2007, we merged our generation subsidiaries in Colombia to form Emgesa. As of December 31, 2014, Enersis had a 37.7% beneficial economic interest in Emgesa, directly and indirectly through Endesa Chile. Pursuant to a shareholders' agreement and the transfer of our 25.1% voting rights to Endesa Chile, we control Emgesa though Endesa Chile and therefore consolidate Emgesa. For more information regarding the control and consolidation of Emgesa, see "Item 5. Operating and Financial Review and Prospects — A. Operating Results. — 1. Discussion of Main Factors Affecting Operating Results and Financial Condition of the Company."

In February 2009, Codensa, our Colombian distribution subsidiary, acquired approximately 49% of DECSA, an investment vehicle. The remaining 51% was acquired by Empresa de Energía de Bogotá ("EEB"). Codensa and EEB jointly control DECSA. In March 2009, DECSA acquired 82.3% of Empresa de Energía de Cundinamarca S.A. ("EEC"), a formerly state-owned company that was privatized that year. EEC is a Colombian company primarily engaged in trading of electricity in Cundinamarca province.

In October 2009, Endesa Chile purchased an additional 29.4% of Edegel from Generalima, an indirect Peruvian subsidiary of Endesa Spain. With this transaction, Endesa Chile increased its economic interest in Edegel from 33.1% to 62.5% and in turn, our economic interest at the Enersis level increased to 37.5%. In the same month, we acquired additional share capital of our Peruvian subsidiary, Edelnor, increasing our beneficial ownership stake in Edelnor to 75.5%.

In June 2012, Endesa Spain, our parent company at the time, proposed a capital increase in Enersis, in which it would carry out an in-kind contribution of all of its equity interests in 25 companies in the five South American countries in which we operate. The rest of the shareholders would contribute their proportional participation in cash. The capital increase was approved by an Extraordinary Shareholders' Meeting held on December 20, 2012. The capital increase was first offered to existing shareholders through a rights' offering registered both in the Chilean SVS and in the United States' SEC and subsequently through a follow-on offering, which ended on March 28, 2013. The total Ch\$ 2,846 billion (approximately US\$ 6 billion) capital increase consisted of Ch\$ 1,714 billion (approximately US\$ 3.6 billion) of in-kind contributions from Endesa Spain and Ch\$ 1,132 billion (approximately US\$ 2.4 billion) in cash from minority shareholders (the "2013 capital increase"). We began consolidating Piura, Cemsa and Dock Sud, following to the in-kind contribution on April 1, 2013.

Following the 2013 capital increase, we have invested approximately Ch\$ 818 billion of the Ch\$ 1,121 billion of net cash proceeds for the acquisition of additional interests in certain companies in which we already had a minority economic interest, directly or indirectly through our subsidiaries, including the following transactions:

- On January 14, 2014, we submitted a voluntary public offer for the acquisition of shares from the shareholders of our subsidiary Coelce. A price of R\$ 49 was offered per share, for all share classes. At the time of the announcement, Enersis controlled Coelce and had an economic interest of 58.9%. We acquired 3,002,812 additional ordinary shares, 8,818,006 preferred A shares and 424 preferred B shares, equivalent to an investment of approximately Ch\$ 133 billion. As a consequence of this transaction which closed in May 2014, Enersis holds a 64.9% economic interest in Coelce.
- On April 30, 2014, we announced the purchase of all indirectly held shares that Inkia Americas Holdings Limited had in Generandes Perú S.A. (equal to 39.0% of such company), the controlling company of Edegel. The total investment amounted to Ch\$ 243 billion (equivalent to US\$ 413 million). As result of this transaction, which closed in September 2014, we hold a 58.6% economic interest in Edegel.

On April 22, 2014, Endesa Chile acquired an additional 50% interest of Inversiones GasAtacama Holding ("GasAtacama Holding"), which had been held by Southern Cross Latin America Private Equity Fund III, L.P since 2007. GasAtacama Holding is the parent company of GasAtacama S.A. ("GasAtacama"), which is a generation company located in northern Chile, and has a 780 MW, four-unit combined-cycle power plant. It also owns a pipeline that allows the import of gas from Argentina. GasAtacama Holding and GasAtacama have been consolidated by Endesa Chile since May 1, 2014. Before this transaction, Endesa Chile held a 48.1% interest in GasAtacama Holding and as a result these companies were recognized as jointly-controlled companies.

On October 23, 2014, Endesa Spain sold 9,967,630,058 of our shares (representing a 20.3% interest) directly held by it and 100% of its shareholding in Enel Latinoamérica (owner of 40.32% of our shares) to a subsidiary of Enel. As a result, Enel beneficially owns 60.6% of our shares and is our controller.

On January 9, 2015, Endesa Chile and Central Eléctrica de Tarapacá ("Celta") sold 100% of the shares that were jointly held in Sociedad Concesionaria Túnel El Melón S.A. to Independencia S.A., a Chilean private fund. The transaction was valued at Ch\$ 25 billion. The sale was part of the disposal of non-strategic assets that we have undertaken in the past few years.

We continue to assess the organization of our company and our subsidiaries on a regular basis, and we will seek to achieve the greatest value to our shareholders by evaluating, from time to time, potential mergers, acquisitions, spin offs, divestments, organizational simplifications and tax optimizations.

As of December 31, 2014, we had 16,868 MW of installed capacity with 208 power units in the five countries in which we operate, 14.8 million distribution customers covering approximately 59.2 million inhabitants, consolidated assets of Ch\$ 15,921 billion and operating revenues of Ch\$ 7,254 billion.

Capital Investments, Capital Expenditures and Divestitures

We coordinate our overall financing strategy, including the terms and conditions of loans and intercompany advances entered into by our subsidiaries, in order to optimize debt and liquidity management. Generally, our operating subsidiaries independently plan capital expenditures financed by internally generated funds or direct financings. One of our goals is to focus on investments that will provide long-term benefits, such as energy loss reduction projects. Additionally, by focusing on Enersis as a group and seeking to provide services across the group of companies, we aim to reduce investments at the individual subsidiary level in items such as procurement, telecommunication and information systems. Although we have considered how these investments will be financed as part of our budget process, we have not committed to any particular financing structure, and investments will depend on the prevailing market conditions at the time the cash flows are needed.

Our investment plan is flexible enough to adapt to changing circumstances by giving different priorities to each project in accordance with profitability and strategic fit. Investment priorities are currently focused on developing additional hydroelectric and thermal capacity in Chile and Colombia to guarantee adequate levels of reliable supply while remaining focused on the environment.

For the 2015-2019 period, we expect to make capital expenditures of Ch\$ 5,854 billion in our consolidated subsidiaries, related to investments currently in progress, maintenance of our distribution network, maintenance of existing generation plants and in the studies required to develop other potential generation projects. For further detail regarding these projects, please see "Item 4. Information on the Company— D. Property, Plant and Equipment — Projects Under Development."

The table below sets forth the expected capital expenditures for the 2015-2019 period and the capital expenditures incurred by our subsidiaries in 2014, 2013 and 2012:

		Capital Expend	itures ⁽¹⁾			
	2015-2019	2014	2013	2012		
		(in millions of Ch\$)				
Chile	1,480,142	197,653	128,240	125,601		
Abroad	4,373,971	891,709	646,580	581,690		
Total	5,854,112	1,089,362	774,820	707,291		

⁽¹⁾ Capex amounts represent effective payments for each year, net of contributions, except for future projections.

Capital Expenditures 2014, 2013 and 2012

Our capital expenditures in the last three years were related principally to the 350 MW Bocamina II project in Chile, the 400 MW El Quimbo project in Colombia and the maintenance of existing installed capacity. El Quimbo is still under construction and Bocamina II began commercial operations in October 2012. Subsequently, Bocamina II suspended operations in December 2013, due to environmental injunctions, and has not resumed operations as of the date of this Report. Additionally, in July 2013, the "Reserva Fría" plant, a 183 MW gas turbine that serves as backup generation for the Peruvian system, began operations in the Talara region. In December 2014, the Salaco plant optimization was completed, adding a total of 145 MW to the Colombian system. In addition, we also invested to expand distribution service in response to increasing demand for energy, to improve quality of service, improve safety and to prevent energy losses, especially in Brazil.

Investments currently in progress

Our material plans in progress include the completion of the El Quimbo project, which is expected to be completed by September 2015, and will add 400 MW of capacity to our Colombian operations. Our material plans also include the 150 MW Los Cóndores project in Chile, which began construction in 2014 and is expected to be completed in 2018. Finally, we plan to continue to expand distribution services and reduce energy losses to improve the efficiency and profitability of our distribution operations in all the countries in which we operate.

We believe projects in progress will be financed with resources provided by external financing as well as internally generated funds for each of the projects described.

B. Business Overview.

We are a publicly held limited liability stock corporation with consolidated operations in Chile, Argentina, Brazil, Colombia, and Peru. Our core businesses are electricity generation, transmission and distribution. We also participate in other activities which are not part of our core business. Since these non-core activities represent less than 1% of our 2014 revenues, we do not report them as separate business in this Report or in our consolidated financial statements.

The table below presents our revenues by business segment.

		Year ended December 31,			
	2014	2013	2012	Change 2014 vs. 2013	
	(in	n millions of Ch\$)		(in %)	
Generation and Transmission Business					
Endesa Chile and subsidiaries (Chile)	1,216,579	955,702	$1,104,776^{(1)}$	27.3

⁽¹⁾ Restated in accordance with IFRS 11.

For further information related to operating revenues and total income by business segment, see "Item 5. Operating and Financial Review and Prospects — A. Operating Results" and Note 35.2 of the Notes to our consolidated financial statements.

Electricity Generation Business Segment

As of December 31, 2014, electricity generation represented 41% of our operating revenues and 57% of our operating income before consolidation adjustments.

Our consolidated electricity sales in 2014 were 69,230 GWh and our production was 60,300 GWh, a 0.2% decrease and a 0.4% increase, respectively, compared to 2013. Since May 2014, we consolidated GasAtacama, which partly accounts for the increases in 2014.

Our total installed capacity in 2014 was 16,868 MW, a 1,021 MW increase compared to 2013, mainly due to the additional 780 MW of capacity of GasAtacama as a result of its consolidation, and the additional 133 MW of capacity of Emgesa due to the following changes: 100 MW increase in the Darío Valencia 2nd and 3rd units, 35 MW from the Salto II unit, 18 MW from the Laguneta, partially offset by a 20 MW decrease due to the decommissioning of the San Antonio unit. This increased capacity is also explained by Edegel's recommissioning of 121 MW of capacity from the Santa Rosa TG 7 unit, partially offset by EEPSA's correction which led to a 5 MW decrease. Our electricity generation business is conducted primarily through Endesa Chile, which consolidates our operations in Chile, Argentina, Colombia and Peru. We also have separate consolidated operations in Brazil through Enel Brasil, in Argentina through Dock Sud and in Peru through EEPSA.

The following tables summarize the information relating to our electricity generation:

ELECTRICITY DATA BY COUNTRY

	Year e	Year ended December 31,			
	2014	2013	2012		
Chile ⁽¹⁾					
Number of generating units ⁽²⁾⁽³⁾	111	105	105

Energy sales (GWh)	69,230	69,369	65,913		

(1) The 2014 data includes GasAtacama, which has been consolidated since May 2014.

- (3) The Bocamina II TV2 generation unit in Chile has been consolidated since April 2012, the Darío Valencia hydro plant in Colombia has been consolidated since November 2013 and unit 2 of the Matucana hydro plant in Peru increased its installed capacity in June 2013. In October 2013, La Junca unit and La Tinta 5 unit in Colombia and the Santa Rosa TG 7 unit in Peru were all decommissioned; however, the Santa Rosa TG 7 unit was recommissioned in December 2014.
- (4) Total installed capacity is defined as the maximum capacity (MW), under specific technical conditions and characteristics. In most cases, installed capacity is confirmed by satisfaction guarantee tests performed by equipment suppliers. Figures may differ from installed capacity declared to governmental authorities and customers in each country, according to criteria defined by such authorities and relevant contracts.
- (5) The data for Argentina includes the data of our Argentine subsidiaries (Costanera and El Chocón), and since April 1, 2013, Dock Sud, which has been consolidated as our subsidiary as of that date.
- (6) The data for Peru includes our Peruvian subsidiary (Edegel), and since April 1, 2013, EEPSA, which has been consolidated as our subsidiary as of that date.

In the electricity industry, it is common to segment the business into hydroelectric and thermoelectric generation, because each type of generation has significantly different variable costs. Thermoelectric generation requires the purchase of fuel, which leads to a high variable costs compared with hydro generation from reservoirs or rivers that have no marginal costs. Of our total consolidated generation in 2014, 56.4% was from hydroelectric sources, 43.4% from thermal sources, and less than 1% from wind energy.

⁽²⁾ For details on generation facilities, see "Item 4. Information on the Company — D. Property, Plant and Equipment — Property, Plant and Equipment of Generating Companies."

The following table summarizes our consolidated generation by type of energy:

CONSOLIDATED GENERATION BY TYPE OF ENERGY (GWh)

	Year ended December 31,					
	2014		2013		2012	
	Generation	%	Generation	%	Generation	%
Hydroelectric	34,000	56.4	30,869	51.4	34,499	60.1
Thermal ⁽¹⁾	26,142	43.4	29,076	48.4	22,752	39.6
Other generation ⁽²⁾	158	0.3	145	0.3	153	0.3
Total generation	60,299	100	60,089	100	57,405	100

⁽¹⁾ The 2014 data includes GasAtacama, which has been consolidated since May 2014.

In the countries in which we operate, the potential for contracting electricity is generally related to electricity demand. Customers identified as small volume regulated customers, including residential customers, are subject to government regulated electricity tariffs, and must purchase electricity directly from a distribution company. These distribution companies, which purchase large amounts of electricity for small volume residential customers, generally enter into contractual agreements with generators at a regulated tariff price. Those identified as large volume industrial customers also enter into contractual agreements with energy suppliers. However, such large volume industrial customers are not subject to the regulated tariff price. Instead, these customers are allowed to negotiate the energy price with generators based on the characteristics of the service required. Finally, the pool market, where energy is normally sold at the spot price, is not carried out through contracted pricing.

The following table contains information regarding our consolidated sales of electricity by type of customer for each of the periods indicated:

CONSOLIDATED ELECTRICITY SALES BY CUSTOMER TYPE (GWh)(1)

	Year ended December 31,					
	2014		2013	3	2012	
	Sales	%	Sales	%	Sales	%
Regulated customers	32,962	47.6	32,140	46.3	32,679	49.6
Unregulated customers	14,568	21.0	15,178	21.9	16,745	25.4
Total contracted sales ⁽²⁾	47,530	68.7	47,318	68.2	49,425	75.0
Electricity pool market sales	21,700	31.3	22,051	31.8	16,488	25.0
Total electricity sales	69,230	100	69,369	100	65,913	100

⁽¹⁾ The 2014 data includes GasAtacama, which has been consolidated since May 2014.

Specific energy consumption limits (measured in GWh) for regulated and unregulated customers are country specific. Moreover, regulatory frameworks often require that regulated distribution companies have contracts to support their commitments to small volume customers and also determine which customers can purchase energy in electricity pool markets.

In terms of expenses, the primary variable costs involved in the electricity generation business, in addition to the direct variable cost of generating hydroelectric or thermal electricity such as fuel costs, are energy purchases and transportation costs. During periods of relatively low rainfall conditions, the amount of our thermal generation increases. This involves an increase of the total fuel cost and the costs of its transportation to the thermal generation power plants. Under drought conditions, electricity that we have contractually agreed to provide may exceed the amount of electricity that we are able to generate, which requires us to purchase electricity in the pool market at spot prices in order to satisfy our contractual commitments. The cost of these purchases at spot prices may, under certain circumstances, exceed the price at which we sell electricity under contracts and, therefore, may result in a loss. We attempt to minimize the effect of poor hydrological conditions on our operations in any year by limiting our contractual sales requirements to a quantity that does not exceed the estimated production in a dry year. To determine an estimated production in a dry year, we take into consideration the available statistical information concerning rainfall, hydrological levels, and the capacity of key reservoirs. In addition to limiting contracted sales, we may adopt other strategies including installing temporary thermal capacity, negotiating lower consumption levels with unregulated customers, negotiating with other water users and including pass-through cost clauses in contracts with customers.

⁽²⁾ Other generation refers to the generation from the Canela and Canela II wind farms.

⁽²⁾ Includes the sales to distribution companies not backed by contracts in Chile and Peru.

Operations in Chile

We own and operate a total of 111 generation units in Chile both directly and through our subsidiaries Pehuenche, Celta and GasAtacama. Of these generation units, 38 are hydroelectric, with a total installed capacity of 3,465 MW. This represents 54.6% of our total installed capacity in Chile. There are 22 thermal generation units that operate with gas, coal or oil with a total installed capacity of 2,809 MW, representing 44.2% of our total installed capacity in Chile. There are 51 wind powered generation units with an aggregate installed capacity of 78 MW, representing 1.2% of our total installed capacity in Chile. All of our generation units are connected to the SIC except for two of Celta's thermoelectric generation units and six of GasAtacama's thermoelectric generation units which are connected to the Northern Interconnected System ("SING") in northern Chile.

For information on the installed generation capacity for each of our Chilean subsidiaries, see "Item 4. Information on the Company — D. Property, Plant and Equipment."

Our total electricity generation in Chile (including the SIC and the SING) accounted for 25.8% of total gross electricity production in Chile during 2014.

The following table sets forth the electricity generation for each of our Chilean generation subsidiaries:

ELECTRICITY GENERATION BY SUBSIDIARY IN CHILE (GWh)

	Year ended December 31,			
	2014 2013		2012	
Endesa Chile	10,092	11,967	11,723	
Pehuenche	2,902	2,565	2,615	
Pangue ⁽¹⁾	_	_	325	
San Isidro ⁽¹⁾	_	2,546	3,529	
Celta ⁽¹⁾	4,553	1,564	798	
Endesa Eco ⁽¹⁾	_	796	204	
GasAtacama ⁽²⁾	516	_	_	
Total	18,063	19,438	19,194	

⁽¹⁾ The electricity generation difference from 2012 to 2013 was primarily due to the merger of Pangue into San Isidro on May 1, 2012, and the merger of San Isidro into Endesa Eco on September 1, 2013, as well as the subsequent merger of Endesa Eco into Celta on November 1, 2013.

The energy equivalent in Chilean reservoirs reached 3,331 GWh in 2014, an increase of 461 GWh, or 16%, compared to 2013 (2,870 GWh). In 2012, the energy equivalent was 2,390 GWh. Generation by type in Chile is shown in the following table:

ELECTRICITY GENERATION BY TYPE IN CHILE (GWh)

	Year ended December 31,					
	2014		2013		2012	
	Generation	%	Generation	%	Generation	%
Hydroelectric generation	11,272	62.4	9,617	49.5	10,578	55.1
Thermal generation ⁽¹⁾	6,344	35.1	9,404	48.4	8,188	42.7
Wind generation – NCRE ⁽²⁾	158	0.9	145	0.7	153	0.8
Mini-hydro generation – NCRE ⁽³⁾	289	1.6	272	1.4	275	1.4
Total generation	18,063	100	19,438	100	19,194	100

⁽¹⁾ The 2014 data includes GasAtacama, which has been consolidated since May 2014.

⁽²⁾ GasAtacama has been consolidated by Endesa Chile since May 2014.

⁽²⁾ Refers to the generation of the Canela and Canela II wind farms.

⁽³⁾ Refers to the generation of Palmucho and the Ojos de Agua mini-hydroelectric plants.

Our thermal electric generation facilities use natural gas, LNG, coal or oil as fuel. In order to satisfy our natural gas and transportation requirements, we signed long-term gas contracts with suppliers that establish maximum supply amounts and prices, as well as long-term gas transportation agreements with the pipeline companies. We currently use Gas Andes (an unaffiliated entity) and Electrogas (an associate of Endesa Chile) as our suppliers. Since March 2008, all of our natural gas units operate using natural gas or diesel, and since December 2009, San Isidro, San Isidro 2 and Ouintero operate using LNG.

Due to the fact that Chile has experienced continuing droughts and does not have hydrocarbon reserves, we believe that LNG has become a strategic business for us and for Chile.

In July 2013, Endesa Chile and British Gas successfully ended the renegotiation of their LNG sale and purchase agreement. This renegotiation modified some conditions of the original contract, allowing Endesa Chile to secure its long term LNG supply at competitive prices, with significant flexibility and new capacity sufficient for its current and future needs.

Endesa Chile also exercised a priority option to purchase additional regasification capacity as part of an expansion at the Quintero LNG Terminal. This has allowed us to increase our regasification capacity from 3.2 million cubic meters per day to 5.4 million cubic meters per day, starting in the first quarter of 2015. This additional capacity will allow our San Isidro and Quintero facilities to provide additional thermal generation and to secure the LNG supply for future power plants.

Endesa Chile has also contracted capacity in the LNG truck loading facility at the Quintero LNG Terminal, which has allowed it to sell the natural gas to industrial customers. In August 2014, the first load of LNG was successfully delivered to the satellite regasification facility of MAERSK, the first industrial customer of Endesa Chile. During 2014, a 20-year sale and purchase agreement was signed with GasValpo (a gas distribution company) to distribute natural gas using the truck loading facility for new customers in various cities in Chile.

At the end of 2013, Endesa Chile signed a 1,100 kton coal supply agreement with Endesa Generación S.A. (a Spanish company), which was believed to be sufficient for our Tarapacá and Bocamina coal power plants in Chile for 2014. However, due to Bocamina's prolonged closure during 2014, some of the coal shipments were deferred to 2015 and will cover Endesa Chile's requirements until mid-2015.

Under Chilean law, power generation companies must demonstrate that a minimum amount of their energy sales are from NCRE. Currently, our Canela wind farm, Ojos de Agua mini-hydroelectric plant and 40% of the installed capacity of our Palmucho mini-hydroelectric plant qualify as NCRE facilities. We fully complied with this obligation during 2014. The additional cost of generating electricity using NCRE facilities is being charged as a pass-through in our new contracts, which mitigates the impact to our operating income.

Total industry electricity sales in Chile increased 2.6% during 2014, with a sales increase of 2.6% in the SIC and of 2.5% in the SING, as detailed in the following table:

ELECTRICITY SALES PER SYSTEM IN CHILE (GWh)

	Year	Year ended December 31,				
	2014	2013	2012			
Electricity sales in the SIC	49,066	47,831	46,282			
Electricity sales in the SING	15,785	15,399	14,831			
Total electricity sales	64,851	63,230	61,113			

Our electricity sales in Chile reached 21,157 GWh in 2014 and 20,406 GWh in 2013, which represented a 32.6% and 32.2% market share, respectively. The percentage of the energy purchases to comply with our contractual obligations to third parties has increased from 4.7% in 2013 to 14.6% in 2014 as a consequence of the decrease of our electricity generation.

The following table sets forth our electricity generation and purchases in Chile:

ELECTRICITY GENERATION AND PURCHASES IN CHILE (GWh)(1)

	Year ended December 31,						
	201	14	201	13	2012		
		%		%		%	
	(GWh)	of Volume	(GWh)	of Volume	(GWh)	of Volume	
Electricity generation	18,063	85.4	19,438	95.3	19,194	91.9	
Electricity purchases	3,094	14.6	968	4.7	1,684	8.1	
Total	21,157	100	20,406	100	20,878	100	

⁽¹⁾ The 2014 data includes GasAtacama, which has been consolidated since May 2014.

We supply electricity to the major regulated electricity distribution companies, large unregulated industrial firms (primarily in the mining, pulp and steel sectors) and the pool market. Commercial relationships with our customers are usually governed by contracts. Supply contracts with distribution companies must be auctioned, and are generally standardized with an average term of ten years.

Supply contracts with unregulated customers (large industrial customers) are specific to the needs of each customer, and the conditions are agreed between both parties, reflecting competitive market conditions.

In 2014, 2013 and 2012, Endesa Chile had 46, 50 and 49 customers, respectively. In 2014, our customers included 18 distribution companies in the SIC and 28 unregulated customers.

The following table sets forth information regarding our electricity sales in Chile by type of customer:

ELECTRICITY SALES PER CUSTOMER SEGMENT IN CHILE (GWh)(1)

	Year ended December 31,							
	201	4	201	3	2012			
	Sales	% of Sales Volume	Sales	% of Sales Volume	Sales	% of Sales Volume		
Regulated customers	15,838	74.9	14,796	72.5	13,971	66.9		
Unregulated customers	4,065	19.2	4,185	20.5	5,996	28.7		
Total contract sales	19,903	94.1	18,981	93.0	19,967	95.6		
Electricity pool market sales	1,254	5.9	1,425	7.0	911	4.4		
Total electricity sales	21,157	100	20,406	100	20,878	100		

⁽¹⁾ The 2014 data includes GasAtacama, which has been consolidated since May 2014.

The most significant supply contracts with regulated customers are with our subsidiary Chilectra S.A. and with Compañía General de Electricidad S.A. ("CGE"), an unaffiliated entity. These are the two largest distribution companies in Chile in terms of sales.

The following table sets forth Endesa Chile's public contracts with electricity distribution companies in the SIC for their regulated customers:

	Year ended December 31,													
							(in GW	h)						
Company	2015	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025	2026	2027	2028
Chilectra	6,498	7,009	7,384	7,733	7,743	7,743	6,772	5,086	3,838	3,838	3,103	1,485	1,485	_
CGE	6,003	7,144	7,083	7,039	7,092	6,223	6,200	4,746	4,644	4,611	423	_	_	_

Saesa	3,006	2,451	2,421	2,365	2,299	798	798	798	798	798	159			
Total	17,013	18,167	18,550	18,885	18,944	16,580	15,588	12,450	11,102	10,344	4,026	1,809	1,485	

Our generation contracts with unregulated customers are generally on a long-term basis and typically range from five to fifteen years. Such contracts are usually automatically extended at the end of the applicable term, unless terminated by either party upon prior notice. Some include a price adjustment mechanism in the case of high marginal costs, and therefore, reduces the hydrological risk. Contracts with unregulated customers may also include specifications regarding power sources and equipment, which may be provided at special rates, as well as provisions for technical assistance to the customer. We have not experienced any supply interruptions under our contracts. If we experienced a *force majeure* event, as defined in the contract, we are allowed to reject purchases and we have no obligation to supply electricity to our unregulated customers. Disputes are typically subject to binding arbitration between the parties, with limited exceptions.

For the year ended December 31, 2014, Endesa Chile's principal distribution customers were (ordered alphabetically): CGE, Chilectra, Chilquinta, Emel group and Saesa group, and Endesa Chile's principal unregulated customers were (ordered alphabetically): Caserones, Compañia Minera Carmen de Andacollo, Compañia Minera Collahuasi, Grupo CAP-Companía Minera de Pacifico and Minera Valle Central.

We compete in the SIC primarily with two generation companies, Colbún S.A. ("Colbún") and Gener. According to the CDEC-SIC in 2014, in the SIC, Colbún had an installed capacity of 3,231 MW, of which 53.2% was thermoelectric and Gener and its subsidiaries had an installed capacity of 2,630 MW, of which 89.2% was thermoelectric, and In addition, there are a number of smaller entities with an aggregate installed capacity of 3,935 MW that generate electricity in the SIC.

Our primary competitors in the SING are E-CL (GDF Suez Group) and Gener, which have 2,359 MW and 1,465 MW of installed capacity, respectively. Our direct participation in the SING includes our 182 MW Tarapacá thermal plant, owned by our subsidiary Celta, and the 780 MW GasAtacama thermal plant.

Electricity generation companies compete largely on the basis of price, technical experience and reliability. In addition, because 64.3% of our installed capacity in the SIC is from hydroelectric power plants, we have lower marginal production costs than companies generating electricity through thermal plants. Our installed thermal capacity benefits from access to gas from the Quintero LNG terminal. However, during periods of extended droughts, we may be forced to buy more expensive electricity from thermoelectric generators at spot prices in order to comply with our contractual obligations.

Directly and through our subsidiaries, we are the principal generation operator in the SIC, with 35.0% of the total installed capacity and 40.0% of the electricity energy sales of this system in 2014.

In the SING, our subsidiaries, Celta and GasAtacama, accounted for 20.4% of the total installed capacity and 10.0% of the electricity energy sales of this system in 2014.

Operations in Argentina

We participate in electricity generation in Argentina through subsidiaries of Endesa Chile (Costanera and El Chocón), and since April 2013, through our subsidiary Dock Sud, with an aggregate of 25 power units with a total installed capacity of 4,522 MW. Costanera owns eleven thermal units, with a total installed capacity of 2,324 MW, el Chocón owns nine hydroelectric units, with total installed capacity of 1,328 MW, and Dock Sud owns five thermal units with a total installed capacity of 870 MW. Our hydro and thermal generation units in Argentina represented 14.4% of the Argentine National Interconnected System ("Argentine NIS") installed capacity in 2014.

Our Argentine subsidiaries have stakes in three additional companies: Termoeléctrica Manuel Belgrano S.A., Termoeléctrica San Martín S.A. and Central Vuelta de Obligado S.A. These companies were formed to undertake the construction of three new generation facilities for a fund called "FONINVEMEM", whose purpose is to increase electricity capacity and generation within the Argentine wholesale electricity market. The first two plants began their operations in 2008 using gas turbines, with an aggregate capacity of 1,125 MW, and combined-cycles plant as of March 2010, with an additional capacity of 572 MW. The total aggregate capacity of these units is 1,697 MW (848 MW from Manuel Belgrano and 849 MW from San Martín). The third plant will begin its open cycle operations in mid-2015 (with an installed capacity of 550 MW), and it is expected to begin its combined cycle operations in 2016 (with a total installed capacity of 800 MW).

Since 2002, government intervention and energy industry authority actions, including limiting the spot price of electricity by considering the variable cost of generating electricity with natural gas and without considering the hydrological conditions of rivers and reservoirs or the use of more expensive fuels, have led to the lack of investment in the electric power sector. (See "Item 4. Operation of the Company— B. Business Overview — Electricity Industry Regulatory Framework" for further detail). In addition, since 2002, the Argentine government has taken an active role in controlling the fuel supply to the electricity generation sector.

In March 2013, the government intervened with the fuel markets through Resolution 95/2013. The electric market operator ("CAMMESA" in its Spanish acronym) is now responsible for the supply and the commercial management of fuels for electric generation purposes.

As of December 31, 2014, Costanera's installed capacity accounted for 7.4% of the total installed capacity in the Argentine NIS. Costanera's second combined-cycle plant can operate with either natural gas or diesel. Our 2,324 MW steam turbine power plant can also operate with either natural gas or fuel oil.

El Chocón accounted for 4.2% of the installed capacity in the Argentine NIS as of December 31, 2014. El Chocón has a 30-year concession, ending in 2023, for two hydroelectric generation facilities with an aggregate installed capacity of 1,328 MW. The larger of the two facilities for which El Chocón has a concession of 1,200 MW of installed capacity is the primary flood control installation on the Limay River. The facility's large reservoir, Ezequiel Ramos Mejía, enables El Chocón to be one of the Argentine NIS major peak suppliers. Variations in El Chocón's water discharge are moderated by El Chocón's Arroyito facility, a downstream dam with 128 MW of installed capacity. In November, 2008, we completed the construction works on the Arroyito dam, and increased the elevation of the reservoir water level, that allows the release of water at an additional 1,150 m3/sec, for a total of 3,750 m3/sec. A portion of the Arroyito facility's generation is sold under the "Energy Plus" program, which provides for the offer of new electricity capacity to supply the electricity demand growth, using the 2005 demand level for electricity as a base. (For details on Energy Plus, see "Item 4. Information on the Company — B. Business Overview — Electricity Industry Regulatory Framework — Argentina").

Dock Sud's installed capacity accounted for 2.8% of the total installed capacity in the Argentine NIS. The Dock Sud combined-cycle plant consists of three generation units with a total installed capacity of 870 MW that operate using either natural gas or diesel as fuel. The two gas turbine units of Dock Sud have 72 MW of installed capacity.

For information on the installed generation capacity for each of our Argentine subsidiaries, see "Item 4. Information on the Company — D. Property, Plant and Equipment—Property, Plant and Equipment of Generating Companies."

Our total generation in Argentina amounted to 14,390 GWh in 2014. According to CAMMESA, our generation market share was approximately 11.0% of the total electricity production in Argentina during 2014.

Hydroelectric generation in Argentina accounted for nearly 18.3% of our total generation in 2014. This was due to the fact that hydrological levels of the Limay River were close to average levels.

Generation by type and subsidiary is shown in the following table:

ELECTRICITY GENERATION IN ARGENTINA (GWh)

	Year ended December 31,							
	2014	1	201	3	2012			
	Generation	%	Generation	%	Generation	%		
Hydroelectric generation (El Chocón)	2,632	18.3	2,317	16.1	2,801	24.8		
Thermal generation (Costanera and Dock								
Sud) ⁽¹⁾	11,758	81.7	12,105	83.9	8,406	75.2		
Total generation	14,390	100	14,422	100	11,207	100		

⁽¹⁾ Includes thermal generation of Dock Sud and Costanera since April 2013.

The following table sets forth our electricity generation and purchases in Argentina:

ELECTRICITY GENERATION AND PURCHASES IN ARGENTINA (GWh)(1)

	Year ended December 31,							
	2014		2013		2012			
	(GWh)	%	(GWh)	%	(GWh)	%		
Electricity generation	14,390	94.2	14,422	87.2	11,207	94.6

Non-contracted sales ⁽²⁾	14,372	94.1	14,324	86.6	9,696	81.8		
Total electricity sales	15,276	100	16,549	100	11,852	100		

- (1) Includes Dock Sud's electricity sales since April 2013.
- (2) Non-contracted electricity sales were sold at spot prices determined by the Regulator.

ELECTRICITY SALES PER SUBSIDIARY IN ARGENTINA (GWh)

	Year e	Year ended December 31,			
	2014	2013	2012		
Costanera	7,051	8,962	8,655		
El Chocón	3,391	3,392	3,197		
Dock Sud ⁽¹⁾	4,834	4,195	_		
Total	15,276	16,549	11,852		

⁽¹⁾ Includes Dock Sud's electricity sales since April 2013.

In March 2013, the government intervened in the commercial market for energy, except with respect to the "Energy Plus" program, through the one-time application of Resolution 95/2013. CAMMESA is now responsible for the administration of contracts with end customers, except for those under the "Energy Plus" program. The resolution defined a transition period in which the electricity generating companies will continue managing the contracts until their expiration dates.

At the end of 2014, Costanera only had one customer contract with an unregulated customer, Cerro Negro, and no contracts with distribution companies.

Sales to the pool market amounted to 6,972 GWh in 2014.

At the end of 2014, El Chocón had five contracts with unregulated customers, five contracts under the "Energy Plus" program and no contracts with distribution companies.

For the year ended December 31, 2014, El Chocón's principal unregulated customers were (ordered alphabetically): Acindar, Air Liquide, Chevron, Mínera Alumbrera, Petroquimica and Profertil. Acindar and Profertil do not have contracts directly with El Chocón, but are served through Cemsa, our subsidiary.

El Chocón does not have the right to terminate its operating agreement with Endesa Chile, unless Endesa Chile fails to comply with its obligations under the agreement. Under the terms of the operating agreement, Endesa Chile is entitled to a fee payable in U.S. dollars based on El Chocón's annual gross revenues, payable in monthly installments.

For the year ended December 31, 2014, Dock Sud's principal unregulated customer was Total Austral S.A.

Sales to the pool market amounted to 4,763.5 GWh in 2014.

According to CAMMESA, electricity demand throughout the Argentine NIS increased by 1.1% during 2014. The total electricity demand was 126,397 GWh in 2014, 125,167 GWh in 2013 and 121,237 GWh in 2012. Our Argentine subsidiaries compete with all the major power plants connected to the Argentine NIS. According to the installed capacity reported by CAMMESA, in its monthly report as of December 2014, our major competitors in Argentina are: (1) the state controlled company Enarsa (with an installed capacity of 1,002 MW), (2) the nuclear unit "NASA" (with an installed capacity of 1,010 MW), and (3) the hydroelectric units Yacyretá and Salto Grande (with an aggregate installed capacity of 3,690 MW). The main private competitors are: AES Group,

Sociedad Argentina de Energía S.A. ("Sadesa"), and Pampa Energía. The AES Group has eight power plants connected to the Argentine NIS with a total installed capacity of 2,754 MW (43.7% of which is hydroelectric). Sadesa owns a total of approximately 3,858 MW of installed capacity, the most significant of which are Piedra del Águila (with an installed capacity of 1,400 MW) and Central Puerto (a thermal facility with 1,777 MW of installed capacity). Pampa Energía, with a total installed capacity of 2,163 MW, competes with us with six power plants, of which 612 MW is hydroelectric and 1,551 MW is thermal.

Operation in Brazil

Enel Brasil consolidates operations of:

- Fortaleza and Cachoeira Dourada, two generation companies;
- CIEN, which transmits electricity from two transmission lines between Argentina and Brazil;
- CTM and TESA, subsidiaries of CIEN, which own the Argentine side of the transmission lines;
- Ampla, the second largest electricity distribution company in the State of Rio de Janeiro; and
- Coelce, which is the sole electricity distributor in the State of Ceará.

As of December 2014, we had a total installed capacity of 987 MW in Brazil, of which 665 MW corresponds to Cachoeira Dourada and 322 MW to Fortaleza.

For information on the installed generation capacity for each of our Brazilian subsidiaries, see "Item 4. Information on the Company — D. Property, Plant and Equipment — Property, Plant and Equipment of Generating Companies."

Generation by type and subsidiary in Brazil is shown in the following table:

ELECTRICITY GENERATION IN BRAZIL (GWh)

		Year ended December 31,							
	2014		2013		2012				
	Generation	%	Generation	%	Generation	%			
Hydroelectric generation (Cachoeira		_							
Dourada)	2,741	52.5	2,404	48.2	3,767	71.1			
Thermal generation (Fortaleza)	2,484	47.5	2,588	51.8	1,416	28.9			
Total	5,225	100	4,992	100	5,183	100			

During 2014, thermal generation represented 47.5% of total generation and hydroelectric generation represented the remaining 52.5%. During 2014, hydrological conditions were below the historical average in the Paranaiba basin, where Cachoeira Dourada is located, with rainfall at approximately 81% of the historical average.

In 2014, 73.5% of our Brazilian electricity sales were supplied by our own generation, requiring us to purchase 26.5% to comply with our contractual obligations to customers.

The following table sets forth our electricity generation and purchases in Brazil:

ELECTRICITY GENERATION AND PURCHASES IN BRAZIL (GWh)

		Year ended December 31,							
	2014		2013		2012				
	(GWh)	%	(GWh)	%	(GWh)	%			
Electricity generation	5,225	73.5	4,992	73.1	5,183	71.1			
Electricity purchases	1,883	26.5	1,835	26.9	2,108	28.9			
Total ⁽¹⁾	7,108	100	6,826	100	7,291	100			

⁽¹⁾ Electricity generation and electricity purchases may differ from total electricity sales because of transmission losses, our power plant's own consumption and technical losses have already been deducted.

Cachoeira Dourada is a hydroelectric company consisting of ten generation units with a total installed capacity of 665 MW, located in southern Brazil. Cachoeira Dourada's market share is 0.5% of the total installed capacity of the Brazilian system. It has long-term contracts (originally seven-year terms, expiring in 2015) with 31 distribution companies due to the bids carried out for regulated customers by bilateral agreements, called Electric Power Trading Agreements within the Regulated Environment ("CCEAR" in its Portuguese acronym). Contracts sales with regulated customers in 2014 were 1,196 GWh. Additionally, during 2014, Cachoeira Dourada had medium-term contracts (originally three to five year terms, expiring in 2014 and 2015) with 21 unregulated customers, with an average duration of three years, and short term contracts with four unregulated customers. Cachoeira Dourada's sales to unregulated customers were 2,437 GWh.

The distribution of Cachoeira Dourada's electricity sales by customer segment is shown in the following table:

CACHOEIRA DOURADA'S ELECTRICITY SALES PER CUSTOMER SEGMENT (GWh)

	Year ended December 31,							
	201	4	20	13	2012			
		% of Sales		% of Sales		% of Sales		
	Sales	Volume	Sales	Volume	Sales	Volume		
Contracted sales	3,634	93.1	3,369	94.5	3,801	87.5		
Non-contracted sales	269	6.9	195	5.5	544	12.5		
Total electricity sales	3,903	100	3,564	100	4,344	100		

For the year ended December 31, 2014, Cachoeira Dourada's principal unregulated customers were (ordered alphabetically): Energías de Portugal (EDP), IBS-Energy, Peugeot, Tractebel and Votener.

Fortaleza is wholly-owned by Enel Brasil. Fortaleza owns a combined-cycle plant with three generation units which use natural gas. The plant is located 50 kilometers from the capital of the State of Ceará, and began commercial operations in 2003. Since January 2010, Fortaleza has received natural gas from the Pecem regasification terminal.

Fortaleza's market share is 0.2% of the total installed capacity of the Brazilian system and 1.0% of the thermoelectric generators. Fortaleza has a long-term contract with Coelce that expires in 2023.

The distribution of Fortaleza's electricity sales by customer segment is shown in the following table:

FORTALEZA'S ELECTRICITY SALES PER CUSTOMER SEGMENT (GWh)

	Year ended December 31,							
	201	4	201	3	2012			
		% of Sales	'	% of Sales		% of Sales		
	Sales	Volume	Sales	Volume	Sales	Volume		
Contracted sales	2,690	83.9	2,690	82.5	2,690	91.3		
Non-contracted sales	515	16.1	572	17.5	257	8.7		
Total electricity sales	3,205	100	3,262	100	2,947	100		

For the year ended December 31, 2014, the Fortaleza's principal distribution customer was Coelce.

Operations in Colombia

Our generation operations in Colombia are carried out through Emgesa. We hold a 37.7% stake in Emgesa as of December 31, 2014, which we control through Endesa Chile and consolidate pursuant to a shareholder's agreement and the transfer of our 25.1% voting rights to Endesa Chile. For more information on our control over Emgesa, see "Item 5. Operating and Financial Review and Prospects — A. Operating Results. — 1. Discussion of Main Factors Affecting Operating Results and Financial Condition of the Company." As of December 31, 2014, Emgesa operated 32 generation units, with a total installed capacity of 3,059 MW, of which 2,615 MW was from hydroelectric plants and 444 MW was from thermoelectric plants. According to *Expertos de Mercado S.A. E.S.P.* ("XM"), a Colombian company that provides system management in real time services in electrical, financial and transportation sectors, our hydroelectric and thermal generation plants represented 19.7% of the country's total electricity generation capacity as of December 2014.

For information on the installed generation capacity for each of our Colombian subsidiaries, see "Item 4. Information on the Company — D. Property, Plant and Equipment—Property, Plant and Equipment of Generating Companies."

Approximately 85% of our installed capacity in Colombia is hydroelectric, and therefore, our electricity generation depends on reservoir levels and rainfall. According to XM, our generation market share was 21.2% in 2014, 20.6% in 2013 and 22.2% in 2012. In addition to hydrological conditions, the generation amount depends on our commercial strategy. Companies are free to offer their electricity at prices driven by market conditions and are dispatched by a centralized operating entity to generate according to the prices offered, as opposed to being dispatched according to the operating costs, as in other countries in which we operate.

During 2014, thermal generation represented 6.9% of total generation and hydroelectric generation represented the remaining 93.1%. In 2014, hydrological conditions were below the historical averages in Colombia, with rainfall around 93% of the historical averages. In the case of Emgesa, according to XM, the hydrological levels of the Guavio River Basin were 3% below the average and the hydrological levels of the Magdalena River (Betania) were 3% higher than the average, while the hydrological levels of the Bogotá River (Cadena Nueva) were 17% higher than the average. For the year ended December 31, 2014, hydroelectric generation increased by 7.1% over 2013 levels.

Generation by type in Colombia is shown in the following table:

ELECTRICITY GENERATION IN COLOMBIA (GWh)

		Year ended December 31,						
	2014	2014		2013				
	Generation	%	Generation	%	Generation	%		
Hydroelectric generation	12,627	93.1	11,784	92.4	12,649	95.5		
Thermal generation	932	6.9	964	7.6	602	4.5		
Total generation	13,559	100	12,748	100	13,251	100		

During 2014, Emgesa used 439 kilotons of coal for its coal-fired plants, which were obtained from over 20 local suppliers. The local coal price has remained below the export price as high transport costs make it difficult for domestic coal to compete in the export market. This trend is expected to continue in the Colombian coal market.

During 2013, Emgesa also entered into a fuel oil supply agreement with Esapetrol, in addition to the existing oil supply contracts with Petromil and Biomax. We believe that this will ensure that Emgesa will have access to a reliable supply of fuel oil for the Cartagena power plant.

The following table sets forth our electricity generation and purchases in Colombia:

ELECTRICITY GENERATION AND PURCHASES IN COLOMBIA (GWh)

			Year ended I	December 31,			
	201	2014		2013		2012	
	(GWh)	%	(GWh)	%	(GWh)	%	
Electricity generation	13,559	85.3	12,748	78.6	13,251	80.8	
Electricity purchases	2,333	14.7	3,461	21.4	3,153	19.2	
Total ⁽¹⁾	15,893	100	16,209	100	16,404	100	

⁽¹⁾ The sum of energy generation and electricity purchases differ from total sold GWh due to the energy used to power the pumps for the Muña reservoir.

Colombia has a single interconnected electricity system, the National Interconnected System ("Colombian NIS"). Electricity demand in the Colombian NIS increased 4.4% during 2014. Total electricity consumption was 63,570 GWh in 2014, 60,890 GWh in 2013 and 59,370 GWh in 2012.

The generation in Colombia's electricity market has been affected by an agreement with Ecuador to provide an interconnection between the electricity systems of both countries. During 2014, Colombian electricity generators sold 824 GWh of electricity to Ecuadorian customers.

In addition, Colombia has interconnection lines with Venezuela that operate under exceptional circumstances as needed by either of the two countries. In April 2011, Colombia and Venezuela signed an agreement to supply energy to Venezuela as part of the normalization of commercial relations. This agreement also includes the import of gasoline and diesel from Venezuela. The total energy exported to Venezuela was 25 GWh in 2014.

The distribution of our electricity sales in Colombia by customer segment is shown in the following table:

ELECTRICITY SALES PER CUSTOMER SEGMENT IN COLOMBIA (GWh)

			Year ended D	ecember 31,			
	201	2014		2013		2012	
	Sales	% of Sales Volume	Sales	% of Sales Volume	Sales	% of Sales Volume	
Contracted sales	10,969	69.5	11,567	71.9	11,719	71.9	
Non-contracted sales	4,804	30.5	4,523	28.1	4,585	28.1	
Total electricity sales	15,773	100	16,090	100	16,304	100	

During 2014, Emgesa served customers under an average of 860 contracts, serving 401 unregulated customers, of which 16 were for distribution and trading companies. Emgesa's sales to our Colombian distribution subsidiary, Codensa, accounted for 24% of our total contracted sales in 2014. Electricity sales to the five largest unregulated customers represented 25% of total contracted sales.

For the year ended December 31, 2014, principal distribution customers were (ordered alphabetically): CEO, Codensa (our subsidiary), Compañia Energética del Tolima ("Enertolima"), Electrificadora del Caribe ("Electrocaribe"), Electrificadora del Huila, Electrificadora del Meta ("Meta"), Electrificadora de Santander, Empresas Públicas de Medellín ("EPM") and PEREIRA.

Our most significant competitors in Colombia include the following state-owned companies: Empresas Públicas de Medellín (with an installed capacity of 3,202 MW) and Isagen (with an installed capacity of 3,001 MW). We also compete with the following private sector companies in Colombia: Chivor (with an installed capacity of 1,000 MW), which is owned by Gener; Colinversiones (with an installed capacity of 1,994 MW), which includes Termoflores and Epsa; and Gecelca (with an installed capacity of 1,207 MW).

Operations in Peru

Through our subsidiaries, Edegel and EEPSA (since April 2013), we operate a total of 27 generation units in Peru, with a total installed capacity of 1,949 MW. As of December 31, 2014, Edegel owns 18 hydroelectric units, with a total installed capacity of 755 MW, and the remaining 898 MW consists of seven thermal units. EEPSA owns two thermal units with an aggregate installed capacity of 297 MW. On May 6, 2013, the TG 7 unit of Santa Rosa was decommissioned due to fire damage. The damage in the plant resulted in a total loss and the insurance covered both the assets and the business interruption for a period of up two years. On December 5, 2014, the TG 7 unit began its commercial operations again. According to the Energy and Mining Investment Supervisory Authority ("Osinergmin" in its Spanish acronym), the Peruvian regulatory electricity authority, our hydroelectric and thermal generation plants in Peru represent 22.4% of the country's total electricity generation capacity as of December 2014.

For information on the installed generation capacity for each of our power plants in Peru, see "Item 4. Information on the Company — D. Property, Plant and Equipment—Property, Plant and Equipment of Generating Companies."

Generation by type and subsidiary in Peru is shown in the following table:

ELECTRICITY GENERATION IN PERU (GWh)

			Year ended Dec	cember 31,		
	2014		2013		2012	
	Generation	%	Generation	%	Generation	%
Hydroelectric generation (Edegel)	4,439	49.0	4,474	52.7	4,428	51.7
Thermal generation (Edegel and						
EEPSA)(1)	4,623	51.0	4,014	47.3	4,141	48.3
Total generation	9,062	100	8,489	100	8,570	100

⁽¹⁾ Includes EEPSA's generation since April 1, 2013. Prior April 1, 2013, the thermal generation refers only to Edegel. According to the Committee of Economic Operation of the Peruvian System ("COES" in its Spanish acronym), we generated 22.3% of total electricity production in 2014.

Hydroelectric generation represented 49.0% of total production of our Peruvian generation subsidiaries in 2014. In the case of Edegel, all hydrological levels were above their historical averages in 2014. According to COES, hydrological levels of the Rimac River Basin (Huinco, Matucana, Callahuanca, Moyopampa and Huampaní) were 9% higher than the average; hydrological levels of the Tulumayo River (C.H. Chimay) were 4.4% higher than the average; and hydrological levels of the Tarma River (C.H. Yanango) were 5% higher than the average.

In 2014, 93.0% of our Peruvian electricity sales were supplied by our generation, requiring us to purchase 7.0% to comply with our contractual obligations to customers.

Edegel has long-term gas supply, transportation and distribution contracts for its Ventanilla and Santa Rosa facilities. It has also signed transport capacity transfer agreements with other generators, which allows it to trade transport capacity in order to operate as instructed by COES, and optimize the use of the natural gas transport system.

The following table sets forth our electricity generation and purchases in Peru:

ELECTRICITY GENERATION AND PURCHASES IN PERU (GWh) (1)

		Year ended December 31,					
	201	2014		2013		12	
	(GWh)	%	(GWh)	%	(GWh)	%	
Electricity generation	9,062	91.4	8,489	89.4	8,570	89.4	
Electricity purchases	854	8.6	1,009	10.6	1,018	10.6	
Total	9,916	100	9,497	100	9,587	100	

⁽¹⁾ Includes EEPSA's electricity generation and purchases since April 2013.

The Peruvian National Interconnected Electric System ("SEIN") is the only interconnected system in Peru. Electricity sales in the SEIN increased by 5.1% in 2014 compared to 2013, amounting to 37,457 GWh.

The distribution of Edegel's electricity sales by customer segment in Peru is shown in the following table:

EDEGEL'S ELECTRICITY SALES PER CUSTOMER SEGMENT (GWh)

			Year ended l	December 31,			
	20	2014		2013		2012	
		% of Sales		% of Sales		% of Sales	
	Sales	Volume	Sales	Volume	Sales	Volume	
Contracted sales ⁽¹⁾	8,719	93.6	7,892	88.6	9,092	94.8	
Non-contracted sales	601	6.4	1,011	11.4	495	5.2	
Total electricity sales	9,320	100	8,903	100	9,587	100	

⁽¹⁾ Includes sales to distributors without contract.

Edegel's electricity sales increased by 4.7% in 2014 compared to 2013, mainly due to the fact that it began to supply distribution companies under long-term contracts. In 2014, sales to unregulated customers represented 38.5% of Edegel's total contracted sales. During 2014, Edegel had eleven regulated customers and fifteen unregulated customers.

In 2012, Edelnor carried out a long-term tender process for 2016-2027, with an energy requirement of approximately 990 GWh per year. The contracts were granted to EEPSA (12.5%), Egejunin (1.8%), Edegel (42.3%), Fenix (24.9%) and Kallpa (18.5%).

In 2013 and 2014, there were no long-term tenders in Peru.

For the year ended December 31, 2014, Edegel's principal distribution customers were (ordered alphabetically): Edelnor (our subsidiary), ElectroSur, Hidrandina, Luz del Sur and Seal, and Edegel's principal unregulated customers were (ordered alphabetically): Antamina, Creditex, Minera Chinalco Perú, Refinería Cajamarquilla and Siderúrgica del Perú.

EEPSA has five long term "wet" gas, which is mixed with other hydrocarbons, sale and purchase agreements, under which EEPSA purchases "wet" gas and through a process obtains "dry" gas which, is used for electric generation purposes at its Malacas Power Plant; and sells dry gas to Talara refinery (owned by Petroperu, the Peruvian NOC) through a supply agreement. To satisfy its dry gas needs, EEPSA signed an agreement with Pariñas Processing Plant, which allows EEPSA to convert wet gas into dry gas, and also recover natural gas liquids, which are shared with Pariñas Processing Plant.

In 2014, EEPSA had contracts with seven regulated customers and four unregulated customers. Sales to regulated customers represented 87.8% of EEPSA's total contracted sales.

The distribution of EEPSA's electricity sales by customer segment is shown in the following table:

EEPSA'S ELECTRICITY SALES PER CUSTOMER SEGMENT (GWh)

			Year ended D	ecember 31,		
	201	4	2013	3 (1)	2012	
	Sales	% of Sales Volume	Sales	% of Sales Volume	Sales	% of Sales Volume
Contracted sales ⁽²⁾	498	83.6	594	100		
Non-contracted sales	98	16.4				
Total electricity sales	596	100	594	100		

- (1) Sales from April 2013 to December 2013.
- (2) Includes sales to distributors without contracts.

For the year ended December 31, 2014, EEPSA's principal distribution customers were (ordered alphabetically): Edelnor and Luz del Sur.

Our most significant competitors in Peru are: Enersur (GDF-Suez group, with an installed capacity of 1,247 MW), Electroperú (a state-owned competitor, with an installed capacity of 902 MW), Kallpa (Inkia Energy group, with an installed capacity of 1,056 MW), Egenor (Duke Energy group, with an installed capacity of 622 MW) and Fenix (Fenix Power Peru group, with an installed capacity of 570 MW).

Electricity Transmission Business Segment

CIEN

Our electricity transmission business is conducted through CIEN, a wholly-owned subsidiary of Enel Brasil, in which we hold an 84.4% economic interest. CIEN consolidates CTM and TESA, which operate the Argentine side of the interconnection line between Argentina and Brazil. In 2014, CIEN represented 1.0% of our operating revenues and 2.4% of our operating income. Since April 2011, CIEN has been recognized by the local authority as a "regulatory asset" and as part of the Brazilian grid, and therefore, it is entitled to receive fixed payments called Permitted Annual Compensation (RAP).

CIEN enables the energy integration of Mercosur, as well as the import and export of electricity between Argentina, Brazil and Uruguay. It has two transmission lines covering a distance of 500 kilometers between Rincón in Argentina and the Santa Catarina substation in Brazil, with a total installed capacity of 2,100 MW. CIEN operates each transmission line under a 30-year concession granted by the Brazilian government that will be in force until 2020 and 2022 respectively. Its subsidiaries, CTM and TESA, have concessions for 87 and 85 years granted by the Argentine government, respectively, and both expire in 2087.

Electricity Distribution Business Segment

Our electricity distribution business is conducted in Chile through Chilectra, in Argentina through Edesur, in Brazil through Ampla and Coelce, in Colombia through Codensa, and in Peru through Edelnor. For the year ended December 31, 2014, electricity sales increased by 2.9% compared to 2013, totaling 77,631 GWh. For more information on energy sales by our distribution subsidiaries for the last five fiscal years, see "Item 3. Key Information — A. Selected Financial Data". Currently, Chilectra is the technical operator of Edesur, Edelnor, Ampla and Coelce, but does not receive operator fees.

Chilectra (Chile)

Chilectra is one of the largest electricity distribution companies in Chile in terms of the number of regulated customers, distribution assets and energy sales. Our economic interest in Chilectra is 99.1%. Chilectra operates in a concession area of 2,105 square kilometers, under an indefinite concession granted by the Chilean government. Chilectra transmits and distributes electricity in 33 municipalities of the Santiago metropolitan region. Its service area is primarily defined as a densely populated area under the Chilean tariff regulations, which govern electricity distribution companies and includes all residential, commercial, industrial, governmental, and toll customers. The Santiago metropolitan region, the capital of Chile, is the country's most densely populated area and has the highest concentration of industries, industrial parks and office facilities in the country. As of December 31, 2014, Chilectra distributed electricity to approximately 1.7 million customers. Chilectra also has direct equity stakes in foreign distribution subsidiaries controlled by us. Its energy losses were 5.3% in 2014 and 2013.

For the year ended December 31, 2014, residential, commercial, industrial and other customers, who are primarily public and municipal, represented 27%, 32%, 18% and 23%, respectively, of Chilectra's total energy sales of 15,702 GWh, which is an increase of 3.6% in comparison with 2013.

The following table sets forth Chilectra's principal operating data for each of the periods indicated:

	Year	Year ended December 31,			
	2014	2013	2012		
Electricity sales (GWh)	15,702	15,152	14,445		
Residential	4,256	4,048	3,778		
Commercial	4,995	4,639	4,212		
Industrial	2,818	2,903	3,061		
Other customers ⁽¹⁾	3,633	3,562	3,394		
Number of customers (thousands)	1,737	1,694	1,659		
Residential	1,555	1,516	1,489		
Commercial	135	132	127		
Industrial	12	12	12		
Other customers	35	34	31		
Energy purchased (GWh) ⁽²⁾	16,584	16,002	15,264		
Total energy losses (%)(3)	5.3%	5.3%	5.4%		

- (1) The data for other customers includes tolls.
- (2) During 2014, 49% of electricity purchased was acquired from Endesa Chile, 29.4% in 2013, and 33% in 2012.
- (3) Energy losses are calculated as the percent difference between energy purchased and energy sold (GWh) within a given period. Losses in distribution arise from illegally tapped lines as well as technical losses.

For the year ended December 31, 2014, Chilectra's principal unregulated customers were (ordered alphabetically): Aguas Andinas S.A., Cencosud, CGE Distribución S.A., El Mercurio S.A, Esco Elecmetal, Gerdau Aza S.A., Goodyear Chile S.A.C.I., Linde Gas Chile S.A. (formerly Aga S.A.), Mall Plaza S.A., Nestlé Chile S.A, Praxair Chile S.A., Sca Chile S.A. (formerly Papeles Industriales S.A.), SCL Terminal Aéreo Santiago, Telefónica Chile S.A. and Walmart Chile S.A.

In 2014, the collection rate was 99.6%, compared to 99.9% in 2013.

For the supply to regulated distribution customers, Chilectra has entered into contracts with the following generation companies: Endesa Chile, Gener, Colbún, Guacolda S.A. and Panguipulli S.A. In 2014, the distribution companies of the SIC jointly submitted a 5,000 GWh/year bid for the period of 2014 through 2025. In August 2014, Chilectra was awarded 15% of the electricity supply in the bidding process held by Endesa Chile. Additionally, the distribution companies of the SIC jointly submitted a second bid with energy requirements of 11,000 GWh/year for the period of 2016 through 2033. In December 2014, Chilectra was awarded 92% of the electricity supply in the bidding process held by the following companies: E.E Carén S.A., Santiago Solar S.A., Acciona Energía Chile SpA, E-CL S.A., Central El Campesino S.A., Norvind S.A. and Abengoa Chile S.A.

For the supply to unregulated distribution customers, Chilectra has contracts with the following generation companies: Duke Energy International Duqueco SpA, Colbún, Hidroeléctrica La Higuera S.A., Hidroeléctrica La Confluencia S.A., Guacolda S.A., Pacific Hydro Chacayes S.A. and Hidroeléctrica San Andrés S.A.

Edesur (Argentina)

Edesur is one of the largest electricity distribution companies in Argentina in terms of energy purchases. Edesur operates in a concession area of 3,309 square kilometers in the south-central part of the Buenos Aires metropolitan area, serving approximately 2.5 million customers, under a 95-year concession granted by the Argentine government that will be in force until 2087. Our economic interest in Edesur is 71.6%. As of December 31, 2014, residential, commercial, industrial and other customers, primarily public and municipal, represented 44%, 25%, 7% and 24%, respectively, of Edesur's total energy sales. In 2014, its energy losses were 10.7% in 2014, compared to 10.8% in 2013.

The following table sets forth Edesur's principal operating data for each of the periods indicated:

	Year e	Year ended December 31,		
	2014	2013	2012	
Electricity sales (GWh)	18,025	18,137	17,738	
Residential	7,913	7,845	7,570	
Commercial	4,488	4,432	4,540	
Industrial	1,364	1,420	1,370	
Other customers ⁽¹⁾	4,260	4,440	4,258	
Number of customers (thousands)	2,464	2,444	2,389	
Residential	2,160	2,140	2,086	
Commercial	270	270	269	
Industrial	23	23	23	
Other customers	11	11	11	
Energy purchased (GWh) ⁽²⁾	20,174	20,334	19,842	
Total energy losses (%)(3)	10.7%	10.8%	10.6%	

- (1) The figures for other customers include tolls.
- (2) Edesur purchased all of its energy from CAMMESA, the governmental agency that regulates and acts as an intermediary between generation and distribution.
- (3) Energy losses are calculated as the percent difference between energy purchased and energy sold (GWh) within a given period. Losses in distribution arise from illegally tapped lines as well as technical losses.

For the year ended December 31, 2014, Edesur's principal unregulated customers were (ordered alphabetically): Abbott Laboratories Argentina S.A., American Express, Arcor, Cencosud S.A., Gas Lanus S.A., Jumbo Retail S.A., Metalcris S.A., Petrobras Energía S.A., Pfizer S.R.L., Pluspetrol S.A., Praxair Argentina S.R.L, Telefónica Argentina S.A, and Walmart Argentina.

In 2014, the collection rate was 99.98%, compared to 100.36% in 2013. The 2013 collection rate was greater than 100% due to the collection of unpaid bills from previous years.

During 2014, Edesur used all its financial resources in order to maintain the distribution of energy in Buenos Aires and to comply with the year's investment plan presented to the Argentine government. This decision was made despite the delay in the Integral Tariff Revision ("RTI" in its Spanish acronym) process carried out by the Electricity National Regulatory Agency ("ENRE" in its Spanish acronym), that will enable an increase in its tariffs due to higher costs in its services provided and, therefore, ensure the viability of Edesur operations. During 2014, Edesur continued its negotiations with the Argentine government to ensure compliance with the "Agreement for Renegotiation of Concession Contract," which includes the adjustment of Edesur income in proportion to costs and the definition of a fair and reasonable fee in an RTI process through the formulation of an integral agreement or equivalent alternative, that would meet these objectives and, in addition, ensure Edesur investments and operations for 2014 and 2015.

The Argentine Secretary of Energy, through its Resolution No. 250/2013 (enacted on May 7, 2013) and its subsequent related notes, permitted that income not received by Edesur through the Cost Monitoring Mechanism ("MMC" in its Spanish acronym), which was intended to compensate for costs not covered by tariffs, be compensated using funds from the Energy Efficiency Program ("PUREE" in its Spanish acronym) collected from Edesur for the period from May 2007 to December 2014. These notes allowed the company to obtain Ch\$ 394.8 billion between 2013 and 2014 as additional revenue. Additionally, the Argentine government instructed CAMMESA to pay Edesur using the generators' sales settlements with maturity dates to be determined ("LVFVD" in its Spanish acronym), which corresponds to the income that had not been received from the MMC and was not covered with the PUREE funds. The Argentine government also authorized CAMMESA to receive these amounts as payment for Edesur debts.

On June 24, 2014, the Argentine Secretary of Energy, through Note No. 4012/2014, authorized CAMMESA to sign a contract with Edesur and Edenor S.A. to fund higher salary costs due to the application of Resolution ST No. 836/2014.

Additionally, the Argentine government ordered Edesur to carry out an extraordinary investment plan for 2014. In the case of not having sufficient funds, Resolution No. 10/2014 established that the financing of this plan will be carried out through CAMMESA.

For further details regarding regulation, see "Item 4. Information on the Company—B. Business Overview — Electricity Industry Regulatory Framework Development". For further details regarding the financial impact, see Item 5. Operating and Financial Review and Prospects—A. Operating Results — 2. Analysis of Results of Operations for the years ended December 31, 2014 and 2013 — Distribution Business: Revenues."

Ampla (Brazil)

Ampla is the second largest electricity distribution company in the State of Rio de Janeiro, Brazil in terms of number of customers and annual energy sales. As of December 31, 2014, we held a 92% economic interest in Ampla. Ampla is mainly engaged in the distribution of electricity to 66 municipalities located in the State of Rio de Janeiro, and serves 2.9 million customers in a concession area of 32,615 square kilometers, with an estimated population of 8.0 million. Ampla operates under a 30-year concession granted by the Brazilian government and it will remain in force until December 2026. As of December 31, 2014, residential, commercial, industrial and other customers represented 41%, 19%, 8% and 32%, respectively of Ampla's total sales of 11,701 GWh (free market or energy losses are excluded). In 2014, its energy losses were 20.1%, compared to 19.8% in 2013.

The following table sets forth Ampla's principal operating data for each of the periods indicated:

	Year ended December 31,			
	2014	2013	2012	
Electricity sales (GWh)	11,701	11,049	10,816	
Residential	4,754	4,512	4,359	
Commercial	2,232	2,133	2,133	
Industrial	970	918	1,011	
Other customers ⁽¹⁾	3,745	3,486	3,313	
Number of customers (thousands)	2,875	2,801	2,712	
Residential	2,607	2,536	2,451	
Commercial	172	171	168	
Industrial	5	5	5	
Other customers	91	89	88	
Energy purchased (GWh) ⁽²⁾	14,647	13,770	13,458	
Total energy losses (%) ⁽³⁾	20.1%	19.8%	19.6%	

- (1) The data for other customers includes tolls.
- (2) During 2014, 0.4% of the electricity purchased was acquired from Cachoeira Dourada, 0.4% in 2013 and 0.5% in 2012.
- (3) Energy losses are calculated as the percent difference between energy purchased and energy sold (GWh) within a given period. Losses in distribution arise from illegally tapped lines as well as technical losses.

In 2014, the collection rate was 98.8%, compared to 99.4% in 2013.

For the year ended December 31, 2014, Ampla's main unregulated customers were (ordered alphabetically): Anglo Ferrous Minas-Rio Mineral, Braskem Petroquimica, Lafarge Brasil, LLX Minas-Rio Logistica, MAN Latin America, Michelin, Petrobras, Peugeot, Rio Polimeros S.A. and Votorantim.

On March 7, 2014, Presidential Decree No. 8,203/2014 was enacted, which amended Presidential Decree No. 7891 of January 23, 2014, in order to reduce the effect of a distribution company's involuntary exposure to the spot market by reimbursing them for the additional costs with funds from Energy Development Account ("CDE") retroactive to January 2014. Higher costs are mainly a consequence of the drought, which required the substitution of thermally generated-energy in the place of hydro-generated energy, which has a lower production cost.

On April 2, 2014, the Brazilian government created the Regulated Contracting Environment account ("ACR"), through Presidential Decree No. 8,221/2014, to cover distribution companies' additional energy costs with bank loans to be repaid within two years through tariffs. This Decree authorized the Trade Chamber ("CCEE" in its Portuguese acronym) to contract the loans needed to fund the payments of distribution companies with deficits. Subsequently, on April 16, 2014, ANEEL enacted Resolution No. 612 and on April 22, 2014, enacted the Note No. 1256, detailing the operation of the ACR, and ratifying the amounts to be transferred by the CCEE to distribution companies, retroactively applied to February 2014.

CCEE negotiated the loan operation of the ACR directly with various financial institutions. On April 25, 2014 CCEE signed the loan agreement for a maximum amount of R\$ 11.2 billion (Ch\$ 2,558 billion using the December 31, 2014 exchange rate of Ch\$ 228.43 per R\$ 1.00), to be transferred to distribution companies that have incurred the additional energy costs. These amounts were established by ANEEL for each distribution company.

On August 15, 2014, another loan agreement was signed by CCEE with several financial institutions for a maximum amount of Ch\$ 1,508 million, which was transferred to distribution companies that have incurred additional energy costs for the period of May 2014 onwards. The conditions are the same as in the prior loan agreement.

This compensation determined by ANEEL enabled Ampla to improve its EBITDA and resulted in a net income attributable to shareholders for Ampla of Ch\$ 194.5 million and for Enersis of Ch\$ 118.1 million.

Under Concession Contract No. 05/1996, which regulates the electricity distribution in Ampla's concession area, Ampla is subject to a comprehensive tariff review by ANEEL every four years. Ampla underwent its third comprehensive tariff review effective as of March 15, 2014. For this review, ANEEL reduced the Weighted Average Cost of Capital ("WACC") from 9.95% to 7.50%, net of taxes, which affected income and reduced the recognized operating costs. These modifications resulted in an average tariff reduction of 2.6% effective as of March 2014. This result was detailed in Technical Note No. 12/2014-SRE/ANEEL.

For the year ended December 31, 2014, Ampla's main unregulated customers are (ordered alphabetically): Lafarge Brasil, Michelin, Petrobras, Peugeot, Quattor Petroquimica, Rio Polimeros S.A, Volkswagen and Votorantim.

Coelce (Brazil)

Coelce is the sole electricity distributor of the State of Ceará, located in northeastern Brazil. As of December 31, 2014, we held a 64.9% economic interest in Coelce. Coelce serves over 3.6 million customers within a concession area of 148,825 square kilometers, under a 30-year concession granted by the Brazilian government, which will remain in force until May 2028. Residential, commercial, industrial and other customers represented 35%, 19%, 11% and 35%, respectively, of Coelce's total energy sales. In 2014, its energy losses were 12.7%, compared to 12.5% in 2013.

The following table sets forth Coelce's principal operating data for each of the periods indicated:

	Year	Year ended December 31,			
	2014	2013	2012		
Electricity sales (GWh)	11,177	10,718	9,878		
Residential	3,940	3,703	3,327		
Commercial	2,076	1,951	1,834		
Industrial	1,206	1,169	1,188		
Other customers ⁽¹⁾	3,955	3,895	3,527		
Number of customers (thousands)	3,625	3,500	3,338		
Residential	2,802	2,720	2,426		
Commercial	230	223	169		
Industrial	7	7	6		
Other customers	586	550	737		
Energy purchased (GWh)	12,806	12,246	11,300		
Total energy losses (%) ⁽²⁾	12.7%	12.5%	12.5%		

⁽¹⁾ The data for other customers includes tolls. During 2014, 21% of the electricity purchased was acquired from Fortaleza, 22% in 2013 and 24% in 2012.

For the year ended December 31, 2014, Coelce's main unregulated customers were (ordered alphabetically): Durametal, Esmaltec, Gerdau, Grandene, Lojas, Mecesa, Norsa Refrigerante, North Shopping, Petrobras, Vicunha Textil and Votorantim.

In 2014, the collection rate was 98.22% compared to 100.74% in 2013. The 2013 collection rate was greater than 100% due to the collection of unpaid bills from previous years.

Coelce is also a party to the ACR process described above for Ampla. As mentioned above, this compensation determined by ANEEL enabled Coelce to improve its EBITDA and resulted in a net income attributable to shareholders for Coelce of Ch\$ 99.7 million and for Enersis of Ch\$ 42.7 million.

Coelce's tariff adjustment in 2014, effective as of April 22, 2014, established an 8.1% increase in the rates, after reversing the adjustment in 2013 decrease of 8.7%. Therefore, the effective net change year over year was a 16.8% increase.

Coelce's tariffs were not adjusted in 2011, and its third tariff revision was completed in 2012. Due to this delay, Coelce had additional income collected between April 2011 and March 2012, because the new tariff was not yet established. These funds were returned to customers through tariff reductions in 2013 and 2014, which resulted in 4.6% lower income in 2014.

⁽²⁾ Energy losses are calculated as the percent difference between energy purchased and energy sold (GWh) within a given period. Losses in distribution arise from illegally tapped lines as well as technical losses.

Codensa (Colombia)

Codensa is a Colombian electricity distribution company that serves a concession area of 14,456 square kilometers in Bogotá and other 96 municipalities of the provinces of Cundinamarca, Tolima and Boyacá, with approximately 2.8 million customers. As of December 31, 2014, we held a 48.4% economic interest in Codensa, which we control through Chilectra and consolidate pursuant the ownership of 57.2% of Codensa's voting rights along with a shareholder agreement. For more information regarding the control and consolidation of Codensa, see "Item 5. Operating and Financial Review and Prospects — A. Operating Results. — 1. Discussion of Main Factors Affecting Operating Results and Financial Condition of the Company."

Under Colombian law, since no concessions are granted, an administrative authorization is required to provide the distribution service. In the case of Codensa, the authorization is of indefinite duration.

Since 2001, Codensa only services regulated customers. The unregulated market is serviced directly by our generation company, Emgesa, with the exception of the public lighting in Bogotá. In 2014, its energy losses were 7.2%, compared to 7.0% in 2013. On September 25, 2012, CREG established the energy losses target of 9.6% that will be recognized in Codensa's distribution tariff for the next five years.

The following table sets forth Codensa's principal operating data for each of the periods indicated:

	Year ended December 31,			
	2014	2013	2012	
Electricity sales (GWh)	13,667	13,342	12,972	
Residential	4,575	4,491	4,423	
Commercial	2,213	2,152	2.114	
Industrial	931	862	897	
Other customers ⁽¹⁾	5,948	5,837	5,538	
Number of customers (thousands)	2,772	2,687	2,588	
Residential	2,459	2,381	2,289	
Commercial	265	259	252	
Industrial	44	44	43	
Other customers	4	3	4	
Energy purchased (GWh)(2)	14,726	14,351	13,995	
Total energy losses (%) ⁽³⁾	7.2%	7.0%	7.3%	

⁽¹⁾ The data for other customers includes tolls.

For the year ended December 31, 2014, Codensa's only unregulated customer was Alumbrado Público Distrito Capital Bogotá.

In 2014, the collection rate was 99.8% compared to 99.9% in 2013. Codensa's ordinary tariff review is currently in progress and it is expected to conclude in 2015.

⁽²⁾ In 2014, 28.4% of the electricity purchased was acquired from Emgesa, 41.3% in 2013 and 41% in 2012.

⁽³⁾ Energy losses are calculated as the percent difference between energy purchased and energy sold (GWh) within a given period. Losses in distribution arise from illegally tapped lines as well as technical losses.

Edelnor (Peru)

Edelnor is a Peruvian electricity distribution company that operates in a concession area of 1,517 square kilometers under an indefinite concession granted by the Peruvian government. As of December 31, 2014, we held a 75.5% economic interest in Edelnor. It has an exclusive concession to distribute electricity in the northern part of the Lima metropolitan area, as well as some provinces in the Lima region, including Huaral, Huaura, Barranca and Oyón, and the adjacent province of Callao. As of December 31, 2014, Edelnor distributed electricity to approximately 1.3 million customers, an increase of 3.1% compared to 2013.

As of December 31, 2014, Edelnor had total energy sales of 7,359 GWh, an increase of 4.5% year over year. In 2014, its energy losses were 8.0%, compared to 7.9% in 2013.

The following table sets forth Edelnor's principal operating data for each of the periods indicated:

	Year ended December 31,			
	2014	2013	2012	
Electricity sales (GWh)	7,359	7,045	6,863	
Residential	2,719	2,634	2,530	
Commercial	1,641	1,582	1,501	
Industrial	1,220	1,239	1,288	
Other customers ⁽¹⁾	1,779	1,590	1,544	
Number of customers (thousands)	1,293	1,255	1,203	
Residential	1,223	1,185	1,136	
Commercial	42	41	41	
Industrial	1	1	1	
Other customers	27	28	25	
Energy purchased (GWh) ⁽²⁾	7,995	7,653	7,475	
Total energy losses (%)(3)	8.0%	7.9%	8.2%	

⁽¹⁾ The data for other customers includes tolls.

For the year ended December 31, 2014, Edelnor's primary unregulated customers are (ordered alphabetically): Alicorp, APM Terminals, Corporación Celima, Corporación JR Lindley, DP World, Fabrica Peruana de Eternit, Goodyear Peru, G&M Ferrovias S.A., Indeco, Lima Airport Partners, Molitalia and Refineria La Pampilla.

The 2014 collection rate was 99.79% compared to 100.29% in 2013. The 2013 collection rate was greater than 100% due to the collection of unpaid bills from previous years.

On October 16, 2013, Osinergmin revised Edelnor's distribution tariff rates for the four year period from November 2013 to October 2017. The new tariff rate was an increase of 1.2% compared to the previous period that ended in October 2013.

Edelnor has entered into short-term contracts to supply power to the regulated and unregulated markets from 2015 to 2020. In addition, Edelnor has also entered into long-term power supply contracts for the period from 2015 to 2027.

On June 18, 2014, Resolution No. 120-2014-OS / CD (which was enacted on April 14, 2014) was amended, and established the tariff rate and compensation for secondary and complementary transmission systems for the period from May 1, 2014 to April 30, 2015.

⁽²⁾ In 2014, 27% of the electricity purchased was acquired from Edegel, Chinango and EEPSA. In 2013, 37% of the electricity purchased was acquired from Edegel and EEPSA, and 46% in 2012.

⁽³⁾ Energy losses are calculated as the percent difference between energy purchased and energy sold (GWh) within a given period. Losses in distribution arise from illegally tapped lines as well as technical losses.

Non-Electricity Businesses

Servicios Informáticos e Inmobiliarios Ltda. (Chile)

Servicios Informáticos e Inmobiliarios Ltda. ("SIEI"), a wholly-owned subsidiary, is a business consultancy in technology, information and computer science, telecommunications, data transmission and develops real estate projects in Chile. SIEI was formed following the merger of ICT Servicios Informáticos Ltda. with Inmobiliaria Manso de Velasco Ltda.

ELECTRICITY INDUSTRY REGULATORY FRAMEWORK

The following chart shows a summary of the main characteristics of the electricity regulatory framework by business segment for the five countries in which we operate.

		Argentina	Brazil	Chile	Peru	Colombia	
Gx	Unregulated Market	Regulated remuneration scheme (Resolution 529/2014)	Spot markets with costs audited by the regulator			Spot market with auctioned cost (Price-offered)	
	Regulated	Seasonal Price	Auction Thermal - 20 years / Hydro - 30 years	Node Price auction 15 years	Node Price auction 20 years	Auction 3/5 years	
	Capacity	Contribution peak demand		Income based on contributions during peak demand		Firm energy contribution (energy auctions for at least 20 years)	
Tx	Features	Public - Open Access - Regulated Tariff Monopoly Regime for Transmission System Operators ("TSOs")					
Dx	Law	Concess	Concession contract Adminis		Administrative Concession (indefinite)		
	Expansion	95 years	30 years	Undefined			
	Tariff review	5 years	4/5 years	4 years		5 years	
Cx	Unregulated Agents	> 0.03 MW	> 0.5 MW		> 0.2 MW	> 0.1 MW	
	Liberalized (%)	≈ 20%	≈ 25%	≈ 30%	≈ 45%	≈ 30%

Chile

Industry Overview

Industry Structure

The Chilean electricity industry is divided into three business segments: generation, transmission and distribution. These business segments are carried out by publicly-owned private sector companies. The state's role is circumscribed to regulation, supervision and indicative investment planning through non-binding recommendations in the case of the generation and transmission businesses, with the exception of the main transmission system in which indicative planning is binding as well as part of the bidding processes for its construction.

The following chart shows the relationships among the various participants in the Chilean market:

The generation segment comprises a group of electricity companies that own generating plants, whose energy is transmitted and distributed to end customers. This segment is characterized by being a competitive market which operates under market-driven conditions. Generation plants sell their production to distribution companies, unregulated customers and other generation companies, and their surpluses on the spot market.

The transmission system is comprised of a combination of lines, substations and equipment for the transmission of electricity from the production points (generators) to the centers of consumption or distribution. Transmission in Chile is defined as lines or substations with a voltage or tension higher than 23 kV. The transmission system is open access, and transmission companies may impose rights of way over the available transmission capacity through the payment of tolls.

The distribution segment is defined for regulatory purposes as all electricity supplied to end customers at a voltage no higher than 23 kV. Distribution companies operate under a distribution public utility concession regime, with service obligations and regulated tariffs for supplying regulated customers.

Customers are classified according to their amount of demand, as follows: (i) unregulated customers with connected capacity of over 2,000 kW; (ii) regulated customers with connected capacity of no more than 500 kW; and (iii) customers that choose either a regulated-tariff or an unregulated regime, for a minimum period of four years in each regime, available to customers whose connected capacity falls in the range of 500 kW to 2,000 kW. In January 2015, the Chilean Congress approved a reform of the procurement system contained in the Chilean Electricity Law (described below), which become effective in 2019 and raised the capacity limit for unregulated customers and customers with the option to choose their regime from 2,000 kW to 5,000 kW.

The distribution companies supply regulated customers, a segment for which the price and supply conditions are the result of tender processes regulated by the CNE), and unregulated customers, with bilateral agreements between generators, whose conditions are freely negotiated and agreed upon.

In Chile, there are four separate interconnected electricity systems. The main systems that cover the most populated Chilean areas are the SIC, which services the central and south central part of the country, where 92% of the Chilean population lives, and the SING, which operates in the northern part of the country, where most of the mining industry is located and where 6% of the Chilean population lives (figures based on the 2014 CDEC-SIC preliminary report). In addition to the SIC and the SING, there are two isolated systems in southern Chile that provide electricity to remote areas, where 2% of the population lives.

In 2013, the Chilean government sent a proposal to modify the Chilean Electricity Law to allow the state to promote the interconnection project between the SIC and the SING. In January 2014, the proposal was approved and signed into law by the Chilean President as Law 20,726. The interconnection is expected to be completed between 2018 and 2019.

In May 2014, the Chilean government announced the Energy Agenda in which a plan is established to create and execute a long-term energy policy. The Energy Agenda presents several courses of action and goals to achieve in the short, medium and long term. These objectives are: lower energy prices, facilitating the incorporation of non-conventional renewable energy sources and promoting the efficient use of energy.

The Energy Agenda includes a program of legal initiatives to realize those goals. Among the subjects to be addressed by this program are: "Amendments to the legal framework for procurement of electricity for regulated customers" (approved and published in the *Diario Oficial* in January 2015), "Incentives to promote local development associated with energy projects" (first quarter of 2015), "Amendments to the legal framework of the electricity transmission systems" (expected for the second quarter of 2015), "Energy Efficiency Law" (expected for the fourth quarter of 2015) and "Law to promote geothermal energy" (expected for the fourth quarter of 2015).

For more information about the amendments, see "—The Electricity Law - General" below.

The operation of electricity generation companies in each of the two major interconnected electricity systems is coordinated by their respective dispatch centers, known as a CDEC, an independent entity that coordinates generators, transmission companies and large customers. CDEC coordinates the operation of its system with an efficiency criterion in which the lowest cost producer available is usually required to satisfy demand at any moment in time. As a result, at any specific level of demand, the appropriate supply will be provided at the lowest possible production cost available in the system. The marginal cost used is the price at which generators trade energy on an hourly basis, involving both their injections into the system and their withdrawals or purchases for supplying their customers.

Principal Regulatory Authorities

The Chilean Ministry of Energy develops and coordinates plans, policies and standards for the proper operation of the sector, approves tariffs and node prices set by the CNE, and regulates the granting of concessions to electricity generation, transmission and distribution companies. The CNE is the technical entity in charge of defining prices, technical standards and regulatory requirements.

The SEF monitors the proper operation of electricity, gas and fuel sectors in compliance with the law in terms of safety, quality, and technical standards.

The Chilean Ministry of Environment is responsible for the development and application of regulatory and policy instruments that provide for the protection of natural resources, the promotion of environmental education and the control of pollution, among other matters. It is also responsible for administering the environmental impact assessment system at the national level, coordinating the preparation of environmental standards and establishing the programs for compliance with the standards.

Chilean antitrust authorities are responsible for preventing, investigating and correcting any threats to free market competition and any anti-competitive practices by potentially monopolistic companies. These authorities include:

- Free Market Competition Tribunal ("TDLC" in its Spanish acronym). This is a special and independent jurisdictional entity, subject to the directive, correctional and economic authority of the Chilean Supreme Court, which functions to prevent, correct and sanction threats to free market competition.
- National Economic Prosecutor ("FNE" in its Spanish acronym). This is the attorney general responsible for economic matters and for investigating and prosecuting all antitrust conduct before the FNE's regulatory commission and other tribunals.

The Panel of Experts acts as a tribunal in electricity matters arising from disputes between participants in the electricity market and between participants in the electricity market and the regulatory authority in certain tariff processes. It issues enforceable resolutions and is composed of experts in industry matters, five engineers or economists and two lawyers, all of whom are elected every six years by the TDLC.

There are also other entities related to the energy sector: the Chilean Nuclear Energy Commission is in charge of research, development, use and control of nuclear energy, and the Chilean Energy Efficiency Agency is in charge of promoting energy efficiency.

The Electricity Law

General

Since its inception, the Chilean electricity industry has been developed by private sector companies. Nationalization was carried out during the period 1970-1973. During the 1980s, the sector was reorganized through the Chilean Electricity Law, known as DFL 1, allowing participation of private capital in the electricity sector. By the end of the 1990s, foreign companies had a majority participation in the Chilean electricity system.

The goal of the Chilean Electricity Law is to provide incentives to maximize efficiency and to provide a simplified regulatory scheme and tariff-setting process that limits the discretionary role of the government by establishing objective criteria for setting prices. The goal is an economically efficient allocation of resources. The regulatory system is designed to provide a competitive rate of return on investment to stimulate private investment, while ensuring the availability of electricity to all who request it.

DFL 1 was published in 1982 and has had few important changes since then. In 1999, a reform was applied to it due to the drought. The first took place in 2004 to encourage investments in transmission lines. Another took place in 2005 to create long-term contracts between generation and distribution companies as part of a bid process. The present text of the law was restated as DFL 4 of 2006, and has been supplemented with a series of regulations and standards.

In January 2015, the Chilean Congress approved amendments to the legal framework for procurement of electricity by regulated customers. Among the principal changes introduced in these amendments, were:

- Increased CNE participation in the development of tenders.
- Additional time to call for tenders: five years in advance.
- Allocation mechanism: Will be awarded to the lowest prices offered. These prices will be limited by a capped price that will be deemed as a reserve price and keep private until the bid price is public.
- Reduced risk: Providers of electricity have the ability to postpone delivery of electricity in the event there are delays due
 to a *force majeure* and to request a price review, indexed to the conditions prevalent at the time which the supply is
 delivered.
- Short-term contracts: Short-term procurement contracts (up to three years), with an advance of one year, have a minimum price equal to the average market price plus 50%. Additionally, within specified ranges from the average marginal cost price, marginal cost will be used.
- Uncontracted energy: All generators within a particular system will be required to offset energy supply contract deficits in proportion to the energy they inject into the system. Each generator will receive the higher of the short-term node price or variable cost of the plant. When energy without contracts exceeds 5% of the total regulated supply, the excess will be paid by distribution companies at a price equal to marginal cost. In turn, these marginal costs will be passed on to end customers.
- Unregulated customers: Unregulated customers capacity limit increased from 2,000 kW to 5,000 kW beginning 2019.

Limits and Restrictions

The owners of the main transmission system must be constituted as limited liability stock corporations and cannot take part in the electricity generation or distribution businesses.

Individual participation in the Main Transmission System ("STT" in its Spanish acronym) by companies operating in another electricity or unregulated customer segment cannot exceed, directly or indirectly, 8% of the total investment value of the STT. The aggregate participation of all such agents in the STT must never exceed 40% of the investment value.

According to the Chilean Electricity Law, there are no restrictions on market concentration for generation and distribution activities. However, Chilean antitrust authorities have imposed certain measures to increase the transparency within the different companies that form our group. The FNE's resolution 667/2002 requires:

- board members of Enersis, Endesa Chile and Chilectra be elected from different and independent groups;
- the external auditors of Enersis, Endesa Chile and Chilectra be different for local statutory purposes;
- Enersis, Endesa Chile and Chilectra may not merge companies within our group which operate in electricity generation and distribution; instead, Enersis must continue to maintain both business segments separately through companies that are independent business units; and
- Enersis, Endesa Chile and Chilectra must remain subject to the regulatory authority of the SVS and comply with the regulations applicable to publicly held stock corporations, even if they should lose such designation.

Additionally, in October 2012, Official Letter No. 1479 imposed additional restrictions on Endesa Chile stating that:

- (i) the controlling shareholders should refrain from designating those persons who had been directors of Chilectra the prior term, as Endesa Chile directors; and
- (ii) Endesa Chile's management should refrain from designating employees in first and second level positions that had held the same positions in Chilectra during the six months prior to their designation.

In addition, the Water Utility Services Law also sets restrictions on the overlapping of concessions in the same area, setting restrictions on the ownership of the property between sewage services concessions and utilities that are natural monopolies, such as electricity distribution, gas or home telephone networks.

Regulation of Generation Companies

Concessions

Chilean law permits generation activity without a concession. However, companies may apply for a concession to facilitate access to third-party properties. Third-party property owners are entitled to compensation, which may be agreed to by the parties or, if there is no agreement, it may be determined by an administrative proceeding that may be appealed in the Chilean courts.

Dispatch and Pricing

In each of the two major electric systems, the pertinent CDEC coordinates the operations of generation companies, in order to minimize the operating costs in the electricity system and monitor the quality of service provided by the generation and transmission companies. Generation companies satisfy their contractual sales requirements with dispatched electricity, whether produced by them or purchased from other generation companies in the spot market.

Sales by Generation Companies to Unregulated Customers

Sales by generation companies may be made to unregulated end customers or to other generation companies under freely negotiated contracts. To balance their contractual obligations with their dispatch, generators have to trade deficit and surplus electricity at the spot market price, which is set hourly by each CDEC, based on the lowest cost of production of the last kWh dispatched.

Sales to Distribution Companies and Certain Regulated Customers

Under Law 20,018 (*Ley Corta II*), enacted on May 19, 2005, all new contracts between generation and distribution companies to supply electricity to regulated customers must arise from international bids. In January 2015, the *Diario Oficial* published Law 20,805, which amended the bidding process for supplying electricity to regulated customers. These amendments, among others, changed the anticipation required for the bidding process from three to five years; the extension of the maximum contract period from 15 to 20 years; new procedures to assign energies without contracts; new procedures to regulate the short-term bidding process; the adoption of a capped price known as "reserve price", that is kept private until the bid price is made public; and the possibility to review the price awarded during the supply period.

Sales of Capacity to Other Generation Companies

Each CDEC determines a firm capacity for each power plant on an annual basis. Firm capacity is the highest capacity which a generator may supply to the system at certain peak hours, taking into consideration statistical information and accounting for time out of service for maintenance purposes and for extremely dry conditions in the case of hydroelectric plants.

A generation company may be required to purchase or sell capacity in the spot market, depending upon its contractual requirements in relation to the amount of electricity to be dispatched from such company and to its firm capacity.

Promotion of Generation from Renewable Energy Sources

On April 1, 2008, Law 20,257 amended the General Electric Services Law. The purpose of the amendment was to promote the development of NCRE. This law defines the different types of technologies that qualify as NCRE and establishes the obligation for generators, between 2010 and 2014, to supply at least 5% of the total energy contracted as of August 31, 2007, to be of a certain type, and to progressively increase this percentage by 0.5 percentage points annually up to a minimum of 10% by 2024.

On October 22, 2013, Law 20,698 (known as the "20/25 Law") supported renewable energy sources and modified the previously defined NCRE minimum requirements. This law establishes a mandatory share of renewable energy sources in 2025, calculated as a percentage of the total contracted energy of each generator. For contracts signed between 2007 and 2013, the target is 10% by 2024, while for contracts beyond 2013 the target is 20% by 2025.

Incentives and Penalties

If a rationing decree is enacted in response to prolonged periods of electricity shortages, strict penalties may be imposed on generation companies that contravene the decree. A severe drought is not considered a *force majeure* event under our service agreements.

Generation companies may also be required to pay fines to the regulatory authorities, as well as to make compensatory payments to electricity customers affected by shortages of electricity. The fines are related to system blackouts due to an electricity generator's operational problems, including failures related to the coordination duties of all system agents. If generation companies cannot satisfy their contractual commitments to deliver electricity during periods when a rationing decree is in effect and there is no energy available to purchase in the system, the generation company must compensate the customers at a rate known as the "failure cost" determined by the authority in each node price setting. This failure cost, which is updated semiannually by the CNE, is a measurement of how many end customers would pay for one extra MWh under rationing conditions.

Regulation of Distribution Companies

Concessions

Distribution service concessions give the right to use public areas for building distribution lines. The concessions are given by the Chilean Ministry of Energy for an undefined period. Distribution companies have the obligation to serve and connect the customers that make the requirement in the concession area. The Chilean President can declare a concession expired if the quality of service does not meet certain minimum standards.

Energy Purchases

Since 2005, with the enactment of "Ley Corta II", energy sales between generation and distribution companies have been made by an international auction process. Based on the distribution companies' projections of increased energy demand, distribution companies auction the projected energy demand three years in advance of the projected year. They can either conduct the auction themselves or as a group with other distribution companies. The CNE supervises the auctions and verifies that the auction bases and the process itself comply with the regulation. The result of the process is "pay as bid", with an extension up to 15 years.

In January 2015, amendments to the procurement rules on were adopted by the Chilean Congress and published in the *Diario Oficial* as discussed above.

Distribution Tariffs to End Customers

The tariffs charged by distribution companies to end customers are determined by the sum of the cost of electricity purchased by the distribution company, a transmission charge and the value added from distribution of electricity ("VAD"), which allows distribution companies to recover their operating costs and includes a return on investment. The price for both generation and distribution capacity sold to customers includes a factor which reflects the simultaneous contribution of each customer to peak capacity demand of the system as a whole. The transmission charge reflects the cost paid for electricity transmission and transformation.

The VAD is based on a so-called "model company" and includes the following: selling, general and administrative distribution costs; maintenance and operating costs of distribution assets; cost of efficient energy losses; and an expected return on investment, before taxes, of 10% per year in real terms based on the replacement cost of assets used for the distribution business.

The CNE selects an actual distribution company and applies efficiency guidelines, which results in a cost structure for a hypothetical model company for each Typical Distribution Area ("TDA") as described below. The rate is not based on actual costs incurred by any given distribution company, but on investment, operating, maintenance and general administrative standards and overall efficiency of operations for the model company.

Regulatory Charges and Subsidies

The Chilean law has established a regulatory charge in the end customers' tariffs, which pays the 20% of the transmission toll.

In addition, the Chilean law deems transitory subsidies that can be granted, if the residential customers tariff increased by at least 5% within a six-month period. The application of this subsidy is optional and the last one was granted in 2009.

Distribution Tariff-Setting Process

The VAD is set every four years. The CNE classifies companies into groups, according to the TDA, based on economic factors that group companies with similar distribution costs due to population density, which determines equipment requirements in the network.

The real return on investment for a distribution company depends on its actual performance relative to the standards chosen by the CNE for the model company. The tariff system allows for a greater return to distribution companies that are more efficient than the model company. Tariff studies are performed by the CNE and distribution companies. Preliminary tariffs are calculated as a weighted average of the results of the CNE-commissioned study and the companies' study, with the results of the CNE's study bearing twice the weight of the companies' study. Preliminary tariffs are then tested to ensure that they provide a rate of return between 6% and 14% of the replacement cost of electricity-related distribution assets for the entire business sector.

Associated Electrical Services

In 2013, the CNE concluded the tariff setting process for regulated associated services (these are 25 services which include meter rental, disconnection and reconnection of service, among others). These new prices were applied starting March 14, 2014 and will remain in effect until 2016.

Incentives and Penalties

Distribution companies may be required to compensate end customers if there are shortages of electricity that exceed the authorized standards. These compensatory payments are equal to double the amount of electricity the distribution company failed to provide, using a rate equal to the failure cost.

Regulation in Transmission

The main transmission system consists of 220 kV or higher voltage lines that are used by generators and customers. Every four years, a study is done to evaluate the existing system and to define the expansion plan. On December 31, 2010, the last study was delivered to the CNE. In November 2011, the CNE promulgated Decree 61, which defines the current value of the existing lines to be remunerated for the 2011 to 2014 period. The main transmission system is paid for by generators and customers.

According to the modifications to the General Electricity Services Law, the transportation of electricity by main transmission systems and sub-transmission systems are defined as a public service. Therefore, the transmitter has a service obligation and is responsible for the maintenance and improvement of its facilities.

On October 14, 2013, the Electricity Concessions Law was approved, which law seeks to streamline the processing of electrical concessions, including, among other things, compensation, taxation and notifications.

During 2014, studies were developed to set tolls of major transmission systems. The results of these studies should have been applied beginning in 2015. However, the authority ruled that the current values will remain in effect for an additional year.

Regulation in Subtransmission

Subtransmission systems are defined as voltage lines exceeding 23 kV. There are six subtransmission systems defined by decree. The subtransmission systems are paid mainly by customers according to the values fixed by decree of the Chilean Ministry of Energy. Generators and unregulated customers pay only for the lines they use in each system. In April 2013, Decree 14 was promulgated, which established a tariff schedule for 2011 through 2014.

During 2014, studies were developed to set tolls of subtransmission systems. The results of these studies should have been applied beginning in 2015. However, the authority ruled that the current values will remain in force for an additional year.

Environmental Regulation

The Chilean constitution grants citizens the right to live in a pollution-free environment. It further provides that certain other constitutional rights may be limited in order to protect the environment. Chile has numerous laws, regulations, decrees and municipal ordinances that address environmental considerations. Among them are regulations relating to waste disposal (including the discharge of liquid industrial wastes), the establishment of industries in areas in which they may affect public health, and the protection of water for human consumption.

Environmental Law 19,300 was enacted in 1994 and has been amended by several regulations, including the Environmental Impact Assessment System Rule issued in 1997 and modified in 2001. This law requires companies to conduct an environmental impact study and a declaration of any future generation or transmission projects.

In January 2010, Law 19,300 was modified by Law 20,417, which introduced changes in the environmental assessment process and in the public institutions involved, principally creating the Chilean Ministry of Environment and the Superintendency of Environment. Environmental assessment processes are coordinated by this entity and the Environmental Assessment Service. In June 2011, the Ministry of Environment published Decree 13, emission standards for thermoelectric plants applicable to generation units of at least 50 MW, in the *Diario Oficial*, a governmental publication. The object of this regulation is to control atmospheric emissions of particulate matter (MP), nitrogen oxides (NOx), sulfur dioxide (SO₂) and mercury (Hg), in order to prevent and protect the health of the population and protect the environment. Existing emission sources will have to meet emission limits as established in the regulation for MP emissions within two and a half years from the date this decree was published (December 2013) and for SO₂ and NOx emissions, within four years in highly polluted areas and within five years elsewhere.

In June 2012, Law 20,600 created the Environmental Courts, special jurisdictional courts subject to the control of the Chilean Supreme Court. Their primary function is to resolve environmental disputes within their jurisdiction and look into other matters that are submitted for their attention under the law. The law created three such courts, all of which are in operation.

On December 28, 2012, the Superintendency of Environment was formally created and began to exercise its powers of enforcement and sanctions pursuant to Chilean environmental regulations.

On September 10, 2014, Law 20,780 was enacted and included charges for the emission of particles (MP), nitrogen oxides (NOx), sulfur dioxide (SO₂) and carbon dioxide (CO₂) into the atmosphere. For CO₂ emissions, the charge is US\$ 5 per emitted ton (not applicable to renewable biomass generation). MP, NOx and SO₂ emissions will be charged the equivalent of US\$ 0.10 per emitted ton, multiplied by the result of a formula based on the population of the municipality where the generation plant is located and an additional fee of US\$ 0.90 for MP, US\$ 0.01 for SO₂ and US\$ 0.025 for NOx per ton. This tax will be in effect beginning in 2018, taking into account the previous year's emissions.

Water Rights

Companies in Chile must pay an annual fee for unused water rights. License fees already paid may be recovered through monthly tax credits commencing on the start-up date of the project associated with the water right. The maximum license fees that may be recovered are those paid during the eight years before the start-up date.

The Chilean Constitution considers water as a national public good on which real utilization rights are defined; that is similar to holding the private property rights over water, as set forth in article 19, paragraph 24: "The rights of individuals over water, recognized or constituted in accordance with the law, grant their holders ownership over such rights." Notwithstanding the foregoing, paragraph 24 also specifies legal limitations to those water rights.

The Chilean Congress is currently discussing amendments to the Water Code, including:

- Granting of water rights which would be limited to a maximum period of 30 years and extendable, unless the Chilean Water Authority proves the ineffective use of resources. The extension shall be effective only for used water rights.
- The expiration of the non-consumptive water right, that were granted by law, if the holder does not exercise the right of use within eight years.
- The expiration of non-consumptive water rights already granted that are not being effectively utilized within a period of 14 years from the date of grant. January 1, 2006 will be considered as the date of grant for the rights granted before 2006.

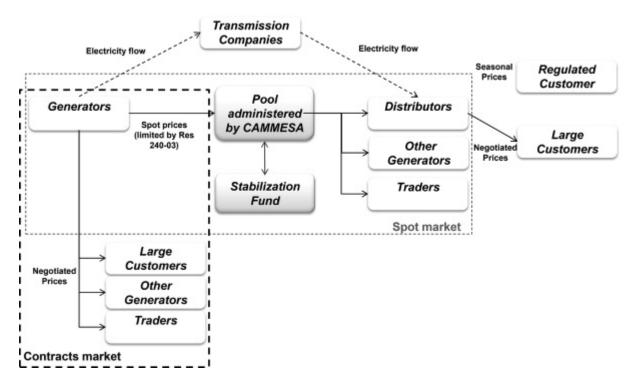

Argentina

Industry Overview

Industry Structure

In the Argentine Wholesale Electricity Market ("Argentine MEM" in its Spanish acronym) there are four categories of local agents (generators, transmitters, distributors, and large customers) and external agents (traders of generation and traders of demand) who are allowed to buy and sell electricity as well as related products.

The following chart shows the relationships among the various participants in the Argentine MEM:

The generation sector was organized on a competitive basis until March 2013, with independent generating companies selling their output in the Argentine MEM spot market, through private contracts to purchasers in the Argentine MEM contract market or to CAMMESA, through special transactions.

On March 26, 2013, the Argentine Secretary of Energy published Resolution 95/2013 that set out a regulated remuneration scheme for power generation activity beginning retroactively from February 2013. The main features of the Resolution are as follows:

- It applies to generators, co-generators and self-generators, except for power plants entered into operation after 2005, nuclear generation and cross-border hydro generation.
- CAMMESA, the market operator, became the single buyer/seller for the fuel needed for plant operations. This implies that market agents will not be allowed to trade commodities.
- Free bilateral trading is suspended: large customers will have to buy electricity directly from CAMMESA (no change of supply for residential customers, they will still be served by distribution companies).
- Generators began to receive a regulated remuneration, which should cover fixed and variable costs plus additional remuneration.

The transmission sector is regarded as a public service, operating under monopoly conditions and is comprised of several companies to whom the Argentine government grants concessions. One concessionaire operates and maintains the highest voltage facilities and eight concessionaires operate and maintain high and medium voltage facilities, to which generation plants, distribution systems and large customers are connected. The international interconnected transmission systems also require concessions granted by the Argentine Secretary of Energy. Transmission companies are authorized to charge different tolls for their services.

Distribution is regarded as a public service, operating under monopoly conditions, and is comprised of companies that have been granted concessions by the Argentine government. Distribution companies have the obligation to make electricity available to end customers within a specific concession area, regardless of whether the customer has a contract with the distributor or directly with a generator. Accordingly, these companies have regulated tariffs and are subject to quality service specifications. Distribution companies may obtain electricity on the Argentine MEM's spot market, at a price called "seasonal price", which is defined by the Argentine Secretary of Energy as the cap for the costs of electricity bought by distributors that can be passed through to regulated customers.

There are two electricity distribution areas subject to federal concessions. The concessionaires are Edesur (one of our subsidiaries) and Edenor (an unrelated company), both of which are located in the greater Buenos Aires area. The local distribution areas are subject to concessions granted by the provincial or municipal authorities. However, all distribution companies acting on the Argentine MEM must operate under its rules.

Regulated customers are supplied by distributors at regulated tariffs.

"Large Customers" are classified into three categories: major large customers, minor large customers and private large customers. Each of these categories of customers has different requirements with respect to purchases of their energy demand. For example, major large customers are required to purchase 50% of their demand through supply contracts and the remainder in the spot market, while minor large customers and private large customers are required to purchase all of their demand through supply contracts. Large customers participate in CAMMESA by appointing two acting and two alternate directors through the Argentine Association of Electric Power for Large Customers.

There is one interconnected system, the Argentine NIS, and smaller systems that provide electricity to specific areas. According to the Argentine National Institute of Statistics and Census ("INDEC" in its Spanish acronym), 99.2% of the energy required by the country is supplied by the Argentine NIS and only 0.8% is supplied by isolated systems.

Principal Regulatory Authorities

The Argentine Ministry of Federal Planning, Public Investment and Services, through the Argentine Secretary of Energy, is primarily responsible for studying and analyzing the behavior of energy markets, preparing the strategic planning with respect to electricity, hydrocarbons and other fuels, promoting policies to increase competition and improve efficiency in the assignment of resources, leading actions for applying the sector policy, orienting new operators to the general interest, respecting the rational exploitation of the resources and the preservation of the environment.

The ENRE carries out the measures necessary for meeting national policy objectives with respect to the generation, transmission and distribution of electricity. Its principal objectives are to: protect the rights of customers; promote competitiveness in production; encourage investments that assure long-term supply; promote free access, non-discrimination and the generalized use of the transmission and distribution services; regulate transmission and distribution services to ensure fair and reasonable tariffs, and encourage private investment in production, transmission, and distribution, ensuring the competitiveness of the markets where possible. ENRE directly controls the management of Edenor and Edesur as distribution companies operating under a national concession. In the case of Edesur, on July 12, 2012, ENRE appointed an overseer, originally for 45 business days, a term that was extended for successive periods of the same duration, in order to monitor and actively control management of Edesur. ENRE resolution 243/2013 increased the term from 45 to 90 business days and it may be extended further.

The principal functions of the CAMMESA are the coordination of dispatch operations, the establishment of wholesale prices and the administration of economic transactions made through the Argentine NIS. It is also responsible for executing the economic dispatch through economic considerations and rationality in the administration of energy resources, coordinating the centralized operation of the Argentine NIS to guarantee its security and quality, and managing the Argentine MEM, in order to ensure transparency through the participation of all the players involved and with respect to the respective regulations.

The principal functions of the Argentine Federal Electricity Council are the following: (i) managing specific funds for the electricity sector and (ii) advising the national executive authority and the provincial governments with respect to the electricity industry, the priorities in performing studies and works, concessions and authorizations, and prices and tariffs in the electricity sector. It also provides advice regarding modifications resulting from legislation referring to the electricity industry.

The Federal Environmental Council is an institutional branch of the federal government empowered to address environmental problems and solutions in Argentina. It has legal authority to coordinate the development of environmental policy among member states. The member states adopt regulations or rules that are issued by the Argentine Assembly, which are issued as resolutions.

The Ministry of Environment and Sustainable Development, a member of the Federal Environment Council, assists the Chief of Cabinet of Ministers in the implementation of environmental measures and articulates its insertion in the ministries and other areas of the national public administration. It seeks to foster rational exploitation and sovereignty over Argentina's natural resources with consideration to fairness and social inclusion. The Secretary is involved in environmental planning and preservation, planning and implementation of national environmental management in the implementation of sustainable development, rational use of non-renewable resources and the diagnosis of environmental issues in coordination with different areas of the Argentine government.

The Electricity Law

General

The Argentine electricity industry was originally developed by private companies. As a result of service problems, the Argentine government began to intervene in the sector in the 1950s and initiated a nationalization process. Law 15,336/60 was passed to organize the sector and establish the federal legal framework for the start of major transmission and generation projects. Many state companies were created within this framework in order to carry out various hydroelectric and nuclear projects.

As a result of the electricity shortage in 1989, the following laws were passed starting in 1990: Law 23,696 ("State Reform"), Law 23,697 ("Economic Emergency") and Law 24,065 ("Electricity Framework"). The objective of the new legislation was essentially to replace the vertically-integrated system based on a centrally-planned state monopoly with a competitive system based on the market and indicative planning.

Regulatory Developments: The Industry After the Public Emergency Law

Law 25,561, the Public Emergency Law, was enacted in 2002 to manage the economic crisis that began that year. It forced the renegotiation of public service contracts (such as electricity transmission and distribution concession contracts) and imposed the conversion of U.S. dollar denominated obligations into Argentine pesos at a pegged rate of Ar\$ 1.00 per US\$ 1.00. The mandatory conversion of transmission and distribution tariffs from U.S. dollars to Argentine pesos at this pegged rate (compared to the market exchange rate at that time of approximately Ar\$ 3.00 per US\$ 1.00) and the regulatory measures that cap and reduce the spot and seasonal prices hindered the pass-through of generation variable costs in the tariffs to end customers.

The Public Emergency Law also empowered the Argentine government to implement additional monetary, financial and foreign exchange measures to overcome the economic crisis in the medium term. These measures have been periodically extended. Law 26,729, which was enacted in December 2011, extended the measures until December 31, 2013 and Law 26,896, enacted in October 2013, further extended the measures until December 31, 2015.

The Argentine Secretary of Energy introduced several regulatory measures aimed at correcting the effects of the devaluation into the Argentine MEM's costs and prices and to reduce the price paid by the end customers.

Resolution SE 240/2003 changed the method for calculating spot prices by decoupling such prices from the marginal cost of operation. Prior to this resolution, spot prices in the Argentine MEM were typically fixed by units operating with natural gas during the warm season (from September through April) and units operating with liquid fuel/diesel in the winter (May through August). Due to restrictions on natural gas supply, winter prices were higher and affected by the price of imported fuels priced in U.S. dollars. Resolution SE 240/2003 sought to avoid price indexation pegged to the U.S. dollar and, although generation dispatch is still based on actual fuels used, the calculation of the spot price under the resolution is defined as if all dispatched generation units did not have the existing restrictions on natural gas supply. In addition, water value is not considered if its opportunity cost is higher than the cost of generating with natural gas. The resolution also set a cap on the spot price at Ar\$ 120 per MWh, which was valid until the adoption of Resolution 95/2013 (March 2013). The real variable costs of thermal units burning liquid fuels were paid by CAMMESA through the Transitory Additional Dispatch Cost (*Sobrecosto transitorio de despacho*) plus a margin of Ar\$ 2.5 per MWh, according to the Resolutions SE 6,866/2009 and 6,169/2010, that came into effect in May 2010.

The Argentine government has avoided the increase in electricity tariffs to end customers and seasonal prices have been maintained substantially fixed in Argentine pesos. In contrast, gas producers have received price revisions by the authority and thereby were able to recover part of the value that they lost as a result of the 2002 devaluation.

Under this system, CAMMESA sells energy to distributors who pay seasonal prices and buys energy from generators at spot prices that recognize rising gas prices at a contractual price defined by the instructions of the Argentine Secretary of Energy. To overcome this imbalance, the Argentine Secretary of Energy — through Resolution SE 406/2003 — only allows payments to generators for amounts collected from the purchasers in the spot market. This resolution set a priority of payment for different services, such as capacity payment, fuel cost and energy sales margin, among others. As a result, CAMMESA accumulates debt with generators while the system gives a distorted price incentive to the market that encourages electricity consumption but discourages investments to satisfy the growth in electricity demand, including investments in transmission capacity. Additionally, electricity generators experience a reduction of estimated income from contract prices because of the reduction of the spot price.

The Argentine government had intentions to gradually reverse its decision to freeze distribution tariffs. During 2011, various resolutions authorizing the elimination of electricity and natural gas subsidies were issued. However, the subsidy elimination has been applied to only 5% of customers, and has not expanded to other customers. For further details, see "— Sales to Distribution Companies and Certain Regulated Customers" below.

In order to enhance the energy supply, the Argentine Secretary of Energy created different schemes to sell "more reliable energy." Resolution 1,281/2006 created the Energy Plus Service Program, which was designed to increase generation capacity in order to meet growth in electricity demand over the "Base Demand," which was the demand for electricity in 2005.

Resolutions SE 220/2007 and 724/2008 gave thermal generators the opportunity to reduce some of the adverse effects of Resolution SE 406/2003 by entering into MEM Supply Commitment Contracts ("CCAM" in its Spanish acronym). Under these resolutions, a thermal generator can perform maintenance or repowering investments to improve the availability of its units and add additional capacity to the system. After authorization, the thermal generator can then sign a CCAM at prices that would permit the recovery of such capital expenditures. Additionally, energy sales through a CCAM receive payment priority compared with spot energy sales under Resolution 406/2003. Generators with a CCAM can supply energy to CAMMESA for up to 36 months, renewable only for an additional period of six months.

During 2009, Resolution SE 762/2009 created the National Hydroelectric Program to promote the construction of new hydro plants. The program enables authorized generators to enter into energy supply contracts with CAMMESA for up to 15 years at prices that would allow for the recoupment of their investment.

The Argentine government has adopted several other measures to encourage new investments, including the following: auctions to expand the capacity of natural gas transportation and electricity transmission; the implementation of certain projects for the construction of power plants; the creation of fiduciary funds to finance these expansions; and the awarding of contracts with renewable energy, called the "GENREN program." For more details, refer to "— Environmental Regulation" below. In addition, Law 26,095/2006 created specific charges that must be paid by end customers, which are used to finance new electricity and gas infrastructure projects. The Argentine government has also enacted regulations to encourage the rational and efficient use of electricity.

Since the implementation of the Electricity Framework, the generation sector has sold the electricity it generates on the wholesale spot market and the private contract market. However, a series of resolutions have been published in recent years that have permitted the Argentine government and generators to sign contracts for the incorporation of new generation and/or maintenance of existing plants to guarantee the availability of the units, all in accordance with Resolutions 146/2002, 220/2007, 724/2008 and 200/2009.

On August 24, 2012, the Argentine government informed electricity sector companies that it would reform the Argentine MEM and end the marginalist system of the 1990s. To implement these changes, a Strategic Planning and Coordination Commission of the National Hydrocarbons Investment Plan was created. The principal change in the generation sector is the evolution of the "liberalized marginalist" model into a "Cost Plus" model in accordance with the following "Declared Principles": (i) any income shall be applied to each company based on the sum of its equity and debt, less redundant assets, (ii) a "Reasonable Profit" would be recognized, and (iii) efficient operating costs would be recognized.

With this new regulatory model, the Argentine government will have more information and control over (i) the profitability of companies, (ii) the quality of service, and (iii) the supply of fuels through CAMMESA, which will be the sole supplier of fuels (through imports and a contract with YPF S.A., an Argentine company engaged in the exploration, distribution and sale of petroleum and its derivatives). Therefore, while generation companies will not pay for fuel, reducing their operating costs, they will not be compensated for this expense in their prices, also reducing part of their revenues and changing the method employed to record revenues and operating costs.

The Argentine Secretary of Energy published Resolution 95/2013 and Resolution 529/2014 in 2013 and 2014, respectively, which established a new remuneration scheme based on average costs for generation companies, in contrast with the previous marginal price payment system. The new remuneration scheme establishes payments for fixed and variable costs depending on the type of technology (hydro or thermal plants), the size of plants (small, medium or large units), and the type of fuel used (natural gas, fuel oil/gas oil, biofuels or coal). The generation companies received the payments defined by Resolution 95/2013 from February 2013 until January 2014. Since February 2014, generation payments have been made according to Resolution 529/2014, with increases intended to compensate for inflationary and non-recurring maintenance costs.

The impact of Resolution 529/2014 has been positive for the 2014 operating income of generators, due to higher payments received than those under Resolution 95/2013, leading to a greater stability and better earnings and cash flow quality in the electricity industry in Argentina. However, the future effect of this regulation will depend on the remuneration values constantly being updated by the Argentine Secretary of Energy according to market conditions.

The increases in the payments received due to Resolution 529/2014, as compared to Resolution 95/2013 are summarized as follows:

- Combined cycles with a capacity greater than 150 MW (Costanera and Dock Sud) will receive a 64% increase.
- Turbo vapor units with a capacity greater than 100 MW (Costanera) will receive a 67% increase.
- Hydro plants with a capacity greater than 300 MW (El Chocón) will receive a 7% increase.
- Turbo gas units with a capacity less than 50 MW (Dock Sud) will receive a 72% increase.
- Hydro plants with a capacity between 120 and 300 MW (the Arroyito unit of El Chocón) will receive an 11% increase.

Part of the additional remuneration set in Resolution 95/2013 will go into a trust for the execution of works in the electricity sector ("Acreencias Res 95"). The Resolution states that the remuneration bound to the trust is not subject to any deduction or discount, and that the Secretary of Energy will define the mechanism under which the receivables collected by CAMMESA due to Resolution SE 406/2003 will be utilized.

Generators, including our subsidiaries, will now have the option to invest in new capacity, which could be financed with accruals of the Trust. Costanera and El Chocón signed an agreement to install four new 9 MW generators at Costanera. The investment of approximately US\$ 43.5 million will be financed with the accruals of El Chocón's "Additional Remuneration Bound Trust" and, if needed, with a loan from Costanera's trust.

On September 5, 2014, the Argentine government signed the Agreement for Increasing Thermal Generation Availability. The agreement's main objective is to establish the framework, conditions and commitments assumed by the signatories to: (i) make the income of new generation profitable before June 1, 2015 and (ii) determine a mechanism for the cancellation of receivables.

FONINVEMEM

Resolution SE 712/2004 created FONINVEMEM, a fund whose purpose is to increase electricity capacity/generation within the Argentine MEM. Pursuant to Resolution SE 406/2003, the Argentine Secretary of Energy decided to pay generators for the spot prices up to the amount available in a stabilization fund, after collecting the funds from the purchasers in the spot market at seasonal prices, which were lower than spot prices for the same period. FONINVEMEM would receive the differences between spot prices and payments to sellers, according to Resolution SE 406/ 2003 from January 1, 2004 to December 31, 2006. CAMMESA was appointed to manage FONINVEMEM.

Pursuant to Resolution SE 1,193/2005, all private generators in the Argentine MEM were called upon to participate in the construction, operation and maintenance of the electricity generation plants to be built with the funds from FONINVEMEM, consisting of two combined-cycle generation plants of approximately 825 MW each.

Due to the insufficient resources to construct the plants, Resolution SE 564/2007 required all of the Argentine MEM's private sector generators to commit to FONINVEMEM by including the differences between spot prices and payments made pursuant to Resolution SE 406/2003 for an additional period ending December 31, 2007. These plants were completed in 2010 and are powered by natural gas or alternative fuels.

The Energy Plus Program

In September 2006, the Argentine Secretary of Energy issued Resolution SE 1,281/2006 in an effort to respond to the continued increase in energy demand following Argentina's economic recovery after the crisis. With this resolution, the Argentine government started the Energy Plus Program. which principal objectives are to (i) create incentives to construct electricity generation plants and (ii) ensure that energy available in the market is used primarily to service residential customers and industrial and commercial customers with an energy demand is at or below 300 kW as well as those who do not have access to other viable energy alternatives.

The resolution also established the price large customers are required to pay for excess demand that are not covered by a contract under the Energy Plus Program, which is equal to the marginal cost of operations. This marginal cost is equal to the generation cost of the last generation unit dispatched to supply the incremental demand for electricity at any given time.

Agreement to Manage and Operate Projects

On November 25, 2010, the Argentine Secretary of Energy signed an agreement with several generation companies, including our subsidiaries, in order to: (i) increase thermoelectric unit availability, (ii) increase energy and capacity prices and (iii) develop new generation units through the contribution of outstanding debts of CAMMESA owed to the generation companies.

This agreement seeks to accomplish the following: (i) continue the reform of the Argentine MEM; (ii) enable the incorporation of new generation to meet the increased demand for energy in the Argentine MEM (pursuant to this agreement, our subsidiaries, together with the SADESA Group and Duke, formed a company to develop the combined-cycle project with a capacity of approximately 800 MW at the Vuelta de Obligado thermal plant ("VOSA"); (iii) determine a mechanism to pay the generators' sales settlements with maturity dates to be determined ("LVFVD"), which represent generators' claims for the period from January 1, 2008 to December 31, 2011. These contributions shall be returned with the interests and converted into U.S. dollars at the date of VOSA's completion, considering the exchange rate existing as of the date on which the agreement was signed; and (iv) determine the method for recognizing the total remuneration due to generators.

On October 24, 2012, the contract for the turnkey supply and construction of the Vuelta de Obligado plant was entered into among General Electric Internacional Inc. and General Electric Internacional Inc., Argentina branch, and the Argentine Secretary of Energy.

The project also includes the expansion of the Río Coronda 500 kV transformer station which connects to the Argentine NIS, the construction of four new fuel tanks, the construction of a gas pipeline to supply natural gas from the national network, and maintenance of the plant during the single and combined-cycle operation periods for a period of ten years.

On December 3, 2014, the Vuelta de Obligado thermal plant started to operate its open cycle, with a capacity of 540 MW. Total installed capacity is expected to reach approximately 800MW in 2015.

Limits and Restrictions

To preserve competition in the electricity market, participants in the electricity sector are subject to vertical and horizontal restrictions, depending on the market segment in which they operate.

Vertical Integration Restrictions

The vertical integration restrictions apply to companies that intend to participate simultaneously in different sub-sectors of the electricity market. These vertical integration restrictions were imposed by Law 24,065 ("Electricity Framework"), and apply differently to each sub-sector as described below:

Generators

- Neither a generation company nor any of its controlled or controlling companies can be an owner, majority shareholder
 or the controlling entity of a transmission company; and
- Since a distribution company cannot own generation units, a holder of generation units cannot own distribution concessions. However, the shareholders of the electricity generator may own an entity that holds distribution units, either by themselves or through any other entity created with the purpose of owning or controlling distribution units.

Transmitters

- Neither a transmission company nor any of its controlled or controlling companies can be an owner, majority shareholder or the controlling company of a generation company;
- Neither a transmission company nor any of its controlled or controlling companies can be an owner, majority shareholder or the controlling company of a distribution company; and
- Transmission companies cannot buy or sell electric energy.

Distributors

- Neither a distribution company nor any of its controlled or controlling companies can be an owner, majority shareholder or the controlling company of a transmission company; and
- A distribution company cannot own generation units. However, the shareholders of an electricity distributor may own
 generation units either by themselves or through any other entity created with the purpose of owning or controlling
 generation units.

Horizontal Integration Restrictions

In addition to the vertical integration restrictions described above, distribution and transmission companies are subject to the following horizontal integration restrictions:

Transmitters

• Two or more transmission companies can merge or be part of a same economic group only if they obtain an express approval from the ENRE. Such approval is also necessary when a transmission company intends to acquire shares of another transmission company. Pursuant to the concession agreements that govern the services rendered by private companies operating transmission lines between 132 kW and 140 kW, the service is rendered by the concessionaire on an exclusive basis in certain areas indicated in the concession agreement. Pursuant to the concession agreements that govern the services rendered by the private companies operating the high-tension transmission services of at least 220 kW, such companies must render the service on an exclusive basis and are entitled to render the service throughout the entire country, without territorial limitations.

Distributors

- Two or more distribution companies can merge or be part of a same economic group only if they obtain an express approval from the ENRE. Such approval is necessary when a distribution company intends to acquire shares of another transmission or distribution company; and
- Pursuant to the concession agreements that govern the services rendered by private companies operating distribution networks, the service is rendered by the concessionaire on an exclusive basis in certain areas indicated in the concession agreement.

Regulation of Generation Companies

Concessions

Hydroelectric generators with a normal generation capacity exceeding 500kW must obtain a concession to use public water sources. Concessions may be granted for a fixed or an indefinite term.

Such concession-holders have the right to: (i) take control of the private properties within the concession area (subject to general laws and local regulations) that are necessary to create reservoirs as well as underground or above ground supply-line and release channels, (ii) flood lands that are necessary to raise water levels, and (iii) request the authorities to make use of the powers conferred in article 10 of Law 15,336 in cases where it is absolutely necessary to appropriate the property of a third-party that was not part of the concession and the concession-holder has failed to reach an agreement with such third-party.

Dispatch and Pricing

CAMMESA controls the coordination of dispatch operations and the administration of the Argentine MEM's economic transactions. All generators that are Argentine MEM agents must be connected to the Argentine NIS and are obliged to comply with the dispatch order to generate and deliver energy to the Argentine NIS. The emergency regulations enacted after the Argentine crisis in 2001 had a significant impact on energy prices. Among the measures implemented pursuant to the emergency regulations were the specification of prices in the Argentine MEM and the requirement that all spot prices be calculated based on the price of natural gas, even in circumstances where alternative fuel such as diesel is purchased to meet demand due to the lack of supply of natural gas.

The introduction of Resolution 95/2013 suppressed the market for energy transactions among generators, large customers and traders. This resolution defines a regulated remuneration scheme for each type of technology used in power generation (see— Argentina — Industry Overview" and "— Regulatory Developments: the Industry After the Public Emergency Law").

Seasonal Prices

The emergency regulations also made significant changes to the seasonal prices charged to distributors in the Argentine MEM, including the implementation of a cap (which varies depending on the category of customer) on the cost of electricity charged by CAMMESA to distributors at a price significantly below the spot price charged by generators. These prices have not changed since November 2008.

Pursuant to Resolution SE 1,301/2011, which announced the elimination of subsidies, the Argentine MEM's seasonal reference prices for non-subsidized electricity were published in November 2011. This resolution also provided for the (i) discontinuation of the practice of charging subsidized prices for non-residential customers based on their payment capacity and economic activity; (ii) creation of a Register of Exceptions including a list of customers exempt from the subsidy elimination, provided that they can certify their inability to bear the seasonal reference prices for non-subsidized electricity; and (iii) the identification of the National State Subsidy, requiring CAMMESA to explicitly identify the subsidies that it provides to each level of demand. Under the resolution, distributors are also required to notify residential customers that will be affected by the elimination of subsidies.

Stabilization Fund

The stabilization fund, managed by CAMMESA, was created to absorb the difference between purchases by distributors at seasonal prices and payments to generators for energy sales at the spot price. When the spot price is lower than the seasonal price, the stabilization fund increases and when the spot price is higher than the seasonal price, the stabilization fund decreases. The outstanding balance of this fund at any given time reflects the accumulation of differences between the seasonal price and the hourly energy price in the spot market. The stabilization fund is required to maintain a minimum balance to cover payments to generators if prices in the spot market during the quarter exceed the seasonal price.

The stabilization fund has been adversely affected as a result of the modifications to the spot price and the seasonal price made by the emergency regulations, pursuant to which seasonal prices were set below spot prices resulting in large deficits in the stabilization fund. These deficits have been financed by the Argentine government through loans to CAMMESA and with FONINVEMEM funds, but these continue to be insufficient to cover the differences between the spot price and the seasonal price.

Sales to Distribution Companies and Regulated Customers

In order to stabilize the prices for distribution, the market uses the seasonal price as the energy price to be paid by distributors for their purchases of electricity traded in the spot market. This is a fixed price determined every six months by the Argentine Secretary of Energy based on CAMMESA's recommended seasonal price level for the next period according to its estimated spot price. CAMMESA estimates this price by evaluating its expected supply, demand and available capacity, as well as other factors. The seasonal price is maintained for at least 90 days. Since 2002, the Argentine Secretary of Energy has been approving seasonal prices lower than those recommended by CAMMESA.

At the end of 2011, the Argentine government issued various resolutions in order to begin a process to reduce subsidies to gas, electricity and water tariffs. These resolutions provide for, among other things, the (i) approval of the seasonal programming of regulated tariffs for the period from November 2011 to April 2012, (ii) establishment of a new non-subsidized seasonal price, which increased from Ar\$ 243 per MWh to Ar\$ 320 per MWh, (iii) listing of economic activities that are subject to the reduction in subsidies, (iv) creation of a register recording the exceptions to the reduction in subsidies, (v) establishment of the effective date for the new tariffs as of January 1, 2012, and (vi) provisions for voluntarily renouncing gas, electricity and water subsidies through an online system.

Specific Regulatory Charges for Electricity Companies

The authority to impose regulatory charges in Argentina is administratively divided among the federal, provincial and the municipal governments. Therefore, the tax charge varies according to where the customer lives.

Incentives and Penalties

The Energy Plus Service Program, part of the Energy Plus Program, is provided by generators that have (i) installed new generation capacity or (ii) connected previously unconnected existing generation capacity to the Argentine NIS. All "Large Customers" that had a higher demand than their Base Demand as of November 1, 2006, were required to enter into a contract with the Energy Plus Service Program to cover their excess demand. Large Customers that did not enter into such contracts are required to pay additional amounts for any consumption that exceeds the Base Demand. The prices under the contracts with Energy Plus Service Program must be approved by the relevant authorities. Unregulated customers that were unable to secure an Energy Plus Service contract are able to request CAMMESA to conduct an auction in order to satisfy their demand.

Regulation of Distribution Companies

Concessions

Distributors are companies holding a concession to distribute electricity to customers (concessions are given to distributors by the jurisdiction where they operate, national, provincial or municipal). Distributors are required to supply any and all demand of electricity in their exclusive areas of concession at tariffs and under conditions in accordance with the relevant local regulations. Penalties for failing to supply the electricity demand are included in the concession agreements. Concessions are issued for distribution and retail sale, with specific terms for the concessionaire stated in the contract. The concession periods are divided into "management periods" that allow the concessionaire to give up the concession at certain intervals.

Energy Purchases

The Argentine Secretary of Energy, through Resolution SE 1,301/2011, reduced the state subsidy of the Argentine MEM for the period from November 2011 to April 2012. This modification has been applied gradually to different segments of residential customers in order to avoid abrupt changes in billing. This process remained practically frozen from March 2012 and is only being applied to approximately 8% of the physical energy sales.

Through Resolution SE 2,016/2012, the Argentine Secretary of Energy approved seasonal prices for the period from November 2012 to April 2013. The resolution sets a sole monomic price (combining both energy and capacity prices) to value all purchases on the Argentine MEM by every distributor in the country and established the regulatory combining bodies and/or authorized entities that are responsible for instructing the distributors in their jurisdiction so that the distributors may correctly apply the seasonal reference prices to their respective price tables.

Distribution Tariff-Setting Process

Distribution under national jurisdiction and transmission companies have been renegotiating contracts since 2005 and although tariffs were partially and temporarily established, definitive tariffs are still pending. As a result, although the terms to define energy prices pursuant to the Argentine Electricity Act are still in force, their implementation reflects the measures taken by the authorities that reduce compensation for all electricity companies. On the other hand, distribution companies under provincial or municipal jurisdiction have seen their tariffs adjusted by local authorities.

During 2006, our subsidiary Edesur and Edenor (not related to us), the largest Argentine distributors, entered into an "Agreement for Renegotiation of Concession Contract". This agreement established, among other things, (i) a transitional tariff regime contingent on the quality of service and (ii) an Integral Rate Revision Process ("RTI" in its Spanish acronym) to be implemented by ENRE according to Law 25,561 that would set the conditions for a new tariff regime for a five-year period. In December 2009, Edesur presented to ENRE its tariff proposal pursuant to the RTI process and also submitted support studies in accordance with the requirements established by Resolution ENRE 467/2008. This presentation only included the income requirements and did not include rate proposals, which were later presented to ENRE in May 2010. As of the date of this Report, ENRE has not defined new tariffs and the transitional tariff regime remains in effect.

Resolution 45/2010 of the Argentine Secretary of Energy determined bonus payments to residential customers under the Energy Efficiency Program ("PUREE" in its Spanish acronym), particularly to those with a demand that is less than 1,000 kWh during a two month period. PUREE was created in 2004 and established bonuses and penalties to customers depending on the level of energy savings. The net difference between the bonuses and penalties was originally deposited to the stabilization fund but this was subsequently modified at the request of Edesur and Edenor. The Argentine Secretary of Energy authorized Edesur and Edenor to use all of such amounts to compensate for the cost variations that were not passed on to the tariffs paid by regulated customers.

Edesur's and Edenor's distribution tariffs have been frozen since July 2008. Combined with a constant increase in costs due to inflation, this has left Edesur in a very delicate financial position. As a result, Edesur made a request in July 2012 for a special payment plan for energy purchases to CAMMESA.

In 2012, the Argentine Secretary of Energy issued Note No.3,787/2012 in order to facilitate financing for necessary investments to the distribution system. The resolution authorized CAMMESA to provide financing for high voltage projects in 2012 investment plan pursuant to the mechanism in Resolution 146/2002.

At the end of 2012, the ENRE issued Resolution ENRE 347/2012 titled "Trust for Financing Distribution Works" ("FOCEDE" in its Spanish acronym). The resolution mandated the formation of a trust with funds collected from customers' payments in order to finance necessary investments infrastructure, including any maintenance works to be carried out in the concession area. The funds collected from customers are to be differentiated depending on customer category and will be taken into consideration by the ENRE when it carries out the RTI process. The trust contract and its operative manual agreement were signed by Edesur on November 29, 2012 and December 18, 2012, respectively.

On May 7, 2013, the Argentine Secretary of Energy approved Resolution 250/2013 which defined the residual value of the MMC funds that are owed to Edesur and Edenor, allowing the compensation of costs and other debts that Edesur and Edenor accrued with the funds collected under the PUREE program. The resulting balance is allocated to the FOCEDE. The Argentine Secretary of Energy has retained the power to extend, either partially or entirely, the provisions of the Resolution 250/2013 on the basis of the information received from ENRE and from CAMMESA. This compensation mechanism is not recurrent but it was utilized several times in 2013 and 2014 by the following Argentine Secretary of Energy Notes: i) on November 6, 2013, Note No.6852 authorized compensation for the period of March 2013 through September 2013; ii) on June 6, 2014 Note No.2361/14 authorized compensation for the period of October 2013 through March 2014; iii) On October 9, 2014 Note N° 0486, authorized application of Resolution 250/2013 for the period of April 2014 through August 2014, and iv) on December 18, 2014 Note No.1136 authorized compensation for the period of September 2014 through December 2014.

Penalties

The distributors are subject to three types of penalties:

- Quality of service penalties related to normal operation such as temporary interruptions, technical, and commercial services;
- 2) Extraordinary penalties, at the discretion of ENRE, apply when distributors do not comply with their service obligations (e.g., blackouts); and
- 3) Supply penalties related to the system as a whole including generation, transmission, and distribution intended to compensate the customers. The latter are temporarily suspended because the system is not generating enough electricity.

Regulation in Transmission

The transmission sector is regulated based on the principles established in the Electricity Framework and the terms of the concession granted to Transener S.A. (the main operator of transmission lines in Argentina and a company not related to us) under Decree 2,743/92. Due to technological reasons, the transmission sector is heavily affected by economies of scale that limit competition. As a result, the transmission sector operates under monopoly conditions and is subject to considerable regulation.

Natural Gas Market

Since the emergency economic measures of 2002, the lack of investment in natural gas production forced the system to burn increasing amounts of liquid fuels.

The Argentine government has adopted different measures to improve the natural gas supply. Since 2004, local gas producers and the Argentine government have entered into various agreements to guarantee gas supply. The last agreement was signed in July 2009 and resulted in a 30% increase in the natural gas price for power generators until December 2009. In addition, Argentina and Bolivia entered into a 20-year agreement in 2006 that guarantees Argentina's right to receive up to 28 million cubic meters of natural gas on a daily basis.

The Electronic Gas Market ("MEG" in its Spanish acronym) was also recently created to increase the transparency of physical and commercial operations in the spot market.

Electricity Exports and Imports

In order to give priority to the internal market supply, the Argentine Secretary of Energy adopted additional measures that restricted electricity and gas exports. Resolution SE 949/2004 established measures that allowed agents to export and import electricity under very restricted conditions. These measures prevented generators from satisfying their export commitments.

The Argentine Secretary of Energy published Disposition 27/2004, together with related resolutions and decrees, which created a plan to ration natural gas exports and the use of transport capacity. These measures restricted gas delivery to Chile and Brazil. These restrictions are expected to continue as Resolution Enargas 1,410, which was issued in October 2010, reinforced such restrictions on gas distribution to certain customers. Specifically, the resolution mandated that the distribution of gas be made in the following order, from highest to lowest priority: (i) residential and commercial customers, (ii) the compressed natural gas market, (iii) large customers, (iv) thermal generator units, and (v) exports.

Environmental Regulation

Electricity facilities are subject to federal and local environmental laws and regulations, including Law 24,051, the "Hazardous Waste Law" and its ancillary regulations.

Certain reporting and monitoring obligations and emission standards are imposed on the electricity sector. Failure to satisfy these requirements entitles the Argentine government to impose penalties such as suspension of operations which, in case of public services, could result in the cancellation of concessions.

Law 26,190, enacted in 2007, defined the use of nonconventional renewable energy as a national interest and set the target at 8% market share for generation from renewable sources within a term of ten years. During 2009, the government took actions to reach this objective by publishing Resolution 712/2009 and launching an international auction to promote the installation of up to 1,000 MW of renewable energy capacity. This resolution created a mechanism to sell renewable energy through fifteen-year contracts with CAMMESA under special price conditions through ENARSA, a state owned company engaged in upstream and downstream activities associated with hydrocarbons and electricity. In June 2010, the "GENREN program" awarded a total of 895 MW, distributed in the following manner: 754 MW of wind power, 110 MW of bio-fuels, 11 MW of mini-hydro, and 20 MW of solar units. The prices awarded vary from US\$ 150 per MWh (for mini-hydro units) to US\$ 598 per MWh (for solar units). In 2011, the Argentine Secretary of Energy issued Resolution 108/11 which allowed CAMMESA to sign contracts directly with generators of renewable energy on conditions similar to Resolution 712/2009.

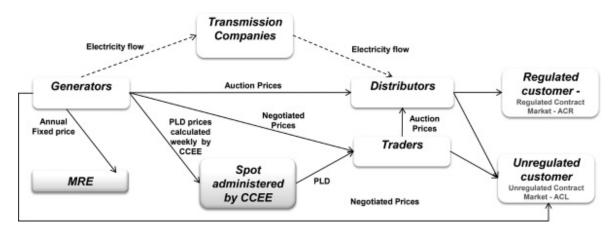

Brazil

Industry Overview

Industry Structure

Brazil's electricity industry is organized into one large interconnected electricity system, the "Brazilian NIS", which comprises most of the regions of Brazil, and several other small isolated systems.

The following chart shows the relationships among the various participants in the Brazilian NIS:

Generation, transmission, distribution and trading are legally separated activities in Brazil.

The generation sector is organized on a competitive basis, with independent generators selling their output through private contracts with distributors, traders or unregulated customers. Differences are sold on the short-term market or spot market at the Settlement Price for the Differences ("PLD" in its Portuguese acronym). There is also a special mechanism between generators that seeks to re-allocate hydrological risk by offsetting differences between generators' assured energy and that which is actually produced, called the Electricity Reallocation Mechanism ("MRE" in its Portuguese acronym).

The Brazilian constitution was amended in 1995 to authorize foreign investment in power generation. Before, all generation concessions were held either by Brazilian individuals or entities controlled by Brazilian individuals or the Brazilian government.

The transmission sector operates under monopoly conditions. Revenues from the transmission companies are fixed by the Brazilian government. This applies to all electricity companies with transmission operations in Brazil. The transmission revenue fee is fixed and, therefore, transmission revenues do not depend on the amount of electricity transmitted.

Distribution is a public service that operates under monopoly conditions and is comprised of companies who have been granted concessions. Distributors in the Brazilian NIS are not permitted to: (i) develop activities related to the generation or transmission of electricity; (ii) sell electricity to unregulated customers, except for those in their concession area and under the same conditions and tariffs with respect to captive customers in the Regulated Market; (iii) hold, directly or indirectly, any interest in any other company, corporation or partnership; or (iv) develop activities that are unrelated to their respective concessions, except for those permitted by law or in the relevant concession agreement. Similarly, generators are not allowed to hold equity interests in excess of 10.0% in distributors.

The selling of electricity is governed by Law 10,848/2004 and Decrees 5,163/2004 and 5,177/2004 of the Electricity Trading Chamber or Clearing House ("CCEE" in its Portuguese acronym), and ANEEL Resolution 109/2004, which introduced the Electricity Trading Convention. This convention defines the terms, rules and procedures of the trading in the CCEE. Two possible situations were introduced by these regulations for the execution of energy sales agreements: (i) the regulated contracting environment, in which energy generation and distribution agents participate, and (ii) the free market contracting environment, in which energy generation, trading, importing and exporting agents, and unregulated customers, participate.

Commercial relations between the agents participating in the CCEE are governed mainly by energy sales agreements. All the agreements between the agents in the Brazilian NIS should be registered with the CCEE. The register includes the amounts of energy and the terms. The energy prices agreed are not registered with the CCEE, but instead are specified by the parties involved in the agreements.

The CCEE records the differences between energy produced or consumed and the contracted amount. The positive or negative differences are settled in the short-term market and priced at the PLD and are determined weekly for each level of load and for each sub-market, based on the system's marginal operating cost, within a minimum and maximum price range.

The unregulated market includes the sale of electricity between generation concessionaires, independent producers, self-producers, sellers of electricity, importers of electricity, unregulated, and special customers. It also includes contracts in place between generators and distributors until their expiration, at which point new contracts may be entered into under the terms of the new regulatory framework. According to the specifications set forth in Law 9,427/96, unregulated customers in Brazil are those who currently: (i) represent a demand of at least 3,000 kW, generated using any method and purchase the energy supply directly with generators or traders, but not directly from distributors or (ii) represent a demand in the range of 500 to 3,000 kW with NCRE and purchase their energy supply directly with alternative generators or traders, with the option to purchase energy from distributors as well.

The Brazilian NIS is coordinated by the Brazilian Electricity System Operator ("ONS" in its Portuguese acronym) and is divided into four electric sub-systems: South-East/Center-West, South, North-East, and North. In addition to the Brazilian NIS, there are also the isolated systems that are not part of the Brazilian NIS. These isolated systems are generally located in the Northern and North-Eastern regions of Brazil and rely solely on electricity generated from coal-fired and oil-fueled thermal plants. According to the ONS, more than 98% of the energy required by Brazil is supplied by the Brazilian NIS and only 1.7% is supplied by isolated systems.

Principal Regulatory Authorities

The Brazilian Ministry of Mines and Energy ("Brazilian MME") regulates the electricity industry and its primary role is to establish the policies, guidelines and regulations for the sector.

The Brazilian National Energy Policy Council ("CNPE" in its Portuguese acronym) is in charge of developing the national electricity policy. Its principal responsibilities include advising the President in the formulation of energy policies and guidelines, promoting the stable and secure supply of the country's energy resources, ensuring the energy supply to the most remote parts of the country, establishing directives for specific programs (such as the use of natural gas, alcohol, biomass, coal and thermonuclear energy) and establishing directives for the import and export of energy.

The Energy Research Company ("EPE" in its Portuguese acronym) is an entity under the Brazilian MME. Its purpose is to conduct research and studies to support energy sector planning.

ANEEL, the Brazilian National Agency for Electric Energy, is the entity that implements the regulatory policies, and its main responsibilities include, among others: (i) supervision of the concessions for electricity sale, generation, transmission and distribution; (ii) enactment of regulations for the electricity sector; (iii) implementation and regulation of the exploitation of electricity resources, including the use of hydroelectricity; (iv) promotion of a bidding process for new concessions; (v) resolution of administrative disputes between electricity sector agents; and (vi) setting the criteria and methodology for determining distribution and transmission tariffs, as well as the approval of all the electricity tariffs, ensuring that customers pay a fair price for energy supplied and, at the same time, preserving the economic-financial balance of the distribution companies, so that they can provide the service to agreed quality and continuity.

The Energy Sector Monitoring Committee ("CMSE" in its Portuguese acronym) is an entity created under the scope of the Brazilian MME and is under the Brazilian MME's direct coordination. CMSE was established to evaluate the continuity and security of the energy supply across the country. CMSE has the mandate to: (i) follow the development of the energy generation, transmission, distribution, trading, import and export activities; (ii) assess the supply and customer service as well as the security of the system; (iii) identify difficulties and obstacles that affect the supply security and regularity; and (iv) recommend proposals for preventive actions that can help preserve the supply security and service.

CCEE is a non-profit company subject to authorization, inspection and regulation by ANEEL and its main purpose is to carry out the wholesale transactions and trading of electric power within the Brazilian NIS by registering the agreements resulting from market adjustments and whose agents are gathered into four categories: generation, distribution, trading and customers.

The ONS is comprised of generation, transmission and distribution companies, and independent customers, and is responsible for the coordination and control of the generation and transmission operations of the Brazilian NIS, subject to the ANEEL's regulation and supervision.

The Brazilian Institute of Environment and Renewable Natural Resources ("IBAMA" in its Portuguese acronym) is an executive body of the National Environmental Policy, which acts as a federal independent organization. It is part of the Ministry of Environment, with responsibility for the implementation of the National Environmental Policy and the preservation and conservation of natural heritage, exercising control and supervision over the use of natural resources (water, flora, wildlife, soil, etc.).

IBAMA is also responsible for the environmental impact studies and the granting of environmental licenses for projects nationwide. The environmental license is a procedure by which the competent environmental agency at the federal, state or municipal levels, allows the location installation, expansion, and operation of businesses and activities that require natural resources. It also can consider the effective or potential pollution, in whatever form, and any cause of environmental degradation. This license seeks to ensure that preventive and control measures taken in the draft are compatible with sustainable development.

The Electricity Law

General

Before 1993, power tariffs were the same throughout Brazil. The dealers were entitled to a guaranteed return because the regulatory regime provided for the cost of service. Concession areas that obtained a higher return than the one guaranteed deposited the surplus in a fund from which the distributors with less than the guaranteed return withdrew the difference.

In 1993, the Brazilian electric sector was reformed through Law 8,631/1993, which abolished the equalization of electricity tariffs system.

The Concessions Law 8,987 and the Power Sector Law 9,074, both enacted in 1995, intended to promote competition and attract private capital into the electricity sector. Since then, several assets owned by the Brazilian government and/or state governments have been privatized.

The Power Sector Law also introduced the concept of independent power producers ("IPPs") in order to open the electricity sector to private sector investment. IPPs are single agents, or agents acting in a consortium, who receive a concession, permit or authorization from the Brazilian government to produce electricity for sale for their own account.

Law 9,648/1998 created the wholesale energy market, composed by the generation and distribution companies. Under this new law, the purchase and sale of electricity are freely negotiated.

The spot price is used to value the purchase and sale of electric power in the short term market. According to the law, the CCEE is responsible for setting electricity prices in the spot market. These prices are calculated on a marginal cost basis, modeling future operation conditions and setting a merit order curve with variable costs for thermal units and opportunity cost for hydroelectric plants, resulting in one price for each subsystem set for the week subsequent to the determination.

Pursuant to Law 10,433/2002, the wholesale energy market structure came to be closely regulated and monitored by ANEEL. ANEEL is also responsible for setting wholesale energy market governance rules including measures to stimulate permanent external investment.

During 2003 and 2004, the Brazilian government established the basis for a new model for the Brazilian electricity sector through Laws 10,847 and 10,848 of March 15, 2004, and Decree 5,163 of July 30, 2004. The principal objectives of these laws and decrees were to (i) guarantee the security of the electricity supply, (ii) promote the reasonability of tariffs, and (iii) improve social integration in the Brazilian electricity sector through programs designed to provide universal access to electricity.

The new model contemplates a series of measures to be followed by the agents, such as the obligation to contract all the demand of the distributors and unregulated customers. It also defines a new methodology for calculating the physical energy guarantee for sale of generation, contracting hydroelectric and thermal generating plants in proportions that ensure the best balance between guarantee and supply cost, plus the constant monitoring of the continuity and security of supply, seeking to detect occasional imbalances between supply and demand.

In terms of tariff reasonability, the model contemplates the purchase of electricity by distributors in a regulated environment through tenders carried out at the lowest tariff. As a result, the cost of acquiring electricity to be passed on to captive customers can be reduced. The new model includes electricity benefits for customers who are not yet included in this program, guaranteeing a subsidy for low income customers.

Limits and Restrictions

Regulatory Resolution 299/2008 repeals certain sections of ANEEL Resolution 278/2000, which established the limits and conditions for the participation of electricity distributors and traders. Specifically, the section of Resolution 278/2000 on limits to generation was repealed. Subsequently, Resolution 378/2009 establishes new procedures for analyzing mergers and violations of economic regulations in the electric power sector.

Regulation of Generation Companies

Concessions

The Concessions Law provides that, upon receiving a concession, IPPs, self-producers, suppliers and customers will have access to the distribution and transmission systems owned by other concessionaires, provided that they are reimbursed for their costs as determined by ANEEL.

Companies or consortia that intend to build or operate hydroelectric generation facilities with a capacity exceeding 30 MW or transmission networks in Brazil have to resort to a public tender process. Concessions granted to the holder give the right to generate, transmit or distribute electricity, as the case may be, in a given concession area for a certain period of time.

Concessions are limited to 35 years for new generation concessions and to 30 years for new transmission or distribution concessions. Existing concessions may be renewed at the Brazilian government's discretion for a period equal to their initial term.

In September 2012, ANEEL's Provisional Resolution 579 established the criteria for the renewal of generation, transmission and distribution concessions that expire between 2015 and 2017. It foresees the reduction of energy tariffs and indemnities for non-depreciated investments in hydroelectric plants and transmission installations. In addition, Provisional Resolution 577 defines procedures for the temporary provision of the electricity energy service in the case of cancellation of concessions due to management problems. It also reinforces the powers of ANEEL to intervene in the case of economic-financial imbalance in order to avoid affecting the service provided.

On January 23, 2013, the Brazilian Congress approved Law 12,783, which renewed electricity concessions according to Provisional Resolution 579. This law requires companies to reduce the average electricity tariff by 20.2% from February 2013, and to extend generation, transmission and distribution concessions for a maximum of 30 years, for both hydroelectric and thermal plants, which expire between 2015 and 2017.

The Values Compensation Account ("CVA" in its Portuguese acronym) helps to maintain stability in the market and allows the creation of deferrable costs, which is compensated through tariff adjustments based on the rates needed to offset the deficits of prior year. In the case of Ampla and Coelce, during 2015 the tariff adjustments were on March and April respectively.

In December of 2014, distributors in Brazil, including Ampla and Coelce, signed an amendment to the concession contract that allowed deferrable costs (CVA and others) to be part of the assets to be compensated at the end of the concession, if they were not compensated before through tariffs. Currently, IFRS allows the recognition of deferrable revenues, if the amounts are guaranteed to be recoverable.

Dispatch and Pricing (Settlement Price for the Differences ("PLD"))

The PLD is used to value the purchase and the sale of electric power in the short term market. The price-setting process of the electric power traded in the short-term market is accomplished by using the data employed by the ONS to optimize the operation of the Brazilian NIS.

The mathematical models used to compute the PLD take into account the preponderance of hydro-electric plants within the Brazilian power generation grid. The purpose is to find an optimal equilibrium solution between the current benefit obtained from the use of the water and the future benefit resulting from its storage, measured in terms of the savings from the use of fuels for thermal plants.

The PLD is an amount computed on a weekly basis for each load level based on the Marginal Operational Cost, which in turn is limited by a maximum and minimum price in effect for each period and submarket. The intervals set for the duration of each level are determined by the ONS for each month and reported to the CCEE to be included into the accounting and settlement system.

The model used to compute the PLD seeks to achieve an optimal result for any given period and to define both the hydroelectric and thermal power generation for each submarket considering the hydrological conditions, the demand for electric power, the prices of fuel, the cost of the deficit, the entry of new projects into operation and the availability of equipment used for generation and transmission. As result of this process, the Marginal Operational Costs can be obtained for each load level and submarket.

The calculation of the price is based on the "ex-ante" dispatch that is determined based on estimated information existing prior to the actual operation of the system, taking into account the declared availability amounts regarding both the generation and the consumption envisaged for each submarket. The complete process for calculating the PLD involves the use of the computational models NEWAVE and DECOMP. These models are used to calculate the Marginal Operational Cost for each submarket on a monthly and weekly basis.

On November 25, 2014, ANEEL approved new limits for the PLD starting in 2015. The maximum limit decreased from R\$ 823 per MWh to R\$ 388 per MWh and the minimum increased from R\$ 16 per MWh to R\$ 30 per MWh. The decision was the result of extensive debate, which began with Public Consultation No. 09/2014 and later in Public Hearing No. 54/2014. The main purpose of the new limits was to reduce the financial impact of the distributor's exposure risks to the spot market for future contracted energy, principally as a reaction to the high spot prices in 2014. Also, the new maximum price mitigates risks faced by generators, such as unrecoverable economic and financial exposure when production is under contracted values. However, the possibility of selling surplus energy decreases with higher prices. Currently, generators can plan their surplus energy in order to boost their income by producing more power in the months where higher prices are expected.

Electricity Reallocation Mechanism

The Electricity Reallocation Mechanism ("MRE" in its Portuguese acronym) provides financial protection against hydrological risks for hydro-generators in order to mitigate the shared hydrological risks that affect generators and assure the optimal use of the hydroelectric resources of the interconnected power system.

The mechanism guarantees that notwithstanding the centralized dispatch, all generators that participate in the MRE will have a participation in the overall hydro generation dispatched in proportion to their assured energy. The final value of the energy allocated to a generator can be greater or less than its assured energy depending on whether the overall hydro generation is greater or less than the overall hydro assured energy, respectively. This mechanism permits each generator, before buying energy in the spot market to fulfill its contracts, to purchase cheaper energy at a price that covers the incremental costs of operation and maintenance of hydroelectric plants and the payment of financial use of water compensation. The tariff used for trading energy in the MRE, the Optimum Energy Tariff, was set as R\$ 10.54 per MWh for 2014.

As the overall generation is more stable than the individual production, the MRE is a very efficient mechanism to reduce the volatility of the individual production and the hydrological risk. Therefore, the energy contracts are only financial instruments in the Brazilian system and generation is totally disassociated from the energy contracts.

Sales between the Agents of the Market

The current model for the electric sector states that the trading of electric power is accomplished in two market environments: the Regulated Contracting Environment ("ACR" in its Portuguese acronym) and the Free-Market Contracting Environment ("ACL" in its Portuguese acronym).

Contracting in the ACR is formalized by means of regulated, bilateral agreements, called Electric Power Trading Agreements within the Regulated Environment ("CCEAR" in its Portuguese acronym) entered into between selling agents (sellers, generators, independent producers or self-producers) and purchasing agents (distributors) who participate in electric power purchase and sale auctions.

In the ACL environment, on the other hand, the negotiation among the generating agents, trading agents, free-market customers, importers and exporters of electric power is accomplished freely, whereby the agreements for the purchase and sale of electric power are entered into through bilateral agreements.

Generation agents, regardless of whether they are public generation concessionaires, IPPs, self-producers or trading agents, are allowed to sell electric power within the two environments. This allows the overall market to remain competitive. All agreements that have been entered into in the ACR or the ACL are registered in the CCEE and they serve as a basis for the accounting posting and the settlement of the differences in the short term market.

Sales by Generation Companies to Unregulated Customers

In the unregulated contracting environment, the conditions for purchasing energy are negotiable between suppliers and their customers. As for the regulated environment, where distribution companies operate, the purchase of energy must be conducted pursuant to a bidding process coordinated by ANEEL. In 2012, the Brazilian MME's Decree 455 mandated the creation of a price index and a requirement to register energy contracts ex-ante. The new price index was published in June 2014 and was tested internally over a six month period before being officially published in the market in December 2014.

Sales by Distribution Companies and Regulated Customers

Pursuant to market regulations, 100% of the energy demand from distributors must be satisfied through long-term contracts. Contracts must be renewed or newly entered into prior to the expiration of current contracts.

Tenders under the current regulatory environment are as follows: (i) A-5 tenders, corresponding to tenders for energy purchases from new generation sources to be supplied five years following the tender; (ii) A-3 tenders, for the acquisition of energy from new generation sources; (iii) A-1 tenders, for the acquisition of energy from existing generation sources; and (iv) A-0 tenders, energy adjustment tenders, for supplementing the energy load necessary for servicing customers in the distribution concession market, with a limit of 1% of such load. Reserve tenders are also carried out for increasing the security of the system.

Various energy tenders were held during 2011, including an A-3 tender and a reserve tender completed in August and an A-5 tender in December. The tender for reserve energy in August 2011 resulted in 1,218.1 MW. These were from wind farm, thermal and biomass projects, involving a total of 41 generating plants. The average price was R\$ 99.61 per MWh. For the new A-5 tender process carried out in December 2011, 42 projects were assigned with a capacity of 1,211.5 MW at an average price of R\$ 102.18 per MWh.

For 2012, two tenders were planned. An A-3 tender for December 12, 2012, was cancelled due to the low demand of distributors. An A-5 tender for new energy was held on December 14, 2012. Of the 574.3 MW of total installed capacity available for tender, 303.5 MW was allocated. The weighted average price was fixed in R\$ 91.25 per MWh. Of the total energy allocated, 294.2 MW was allocated to two hydroelectric plants (at an average price of R\$ 93.46 per MWh) and 281.9 MW was allocated to ten wind farms (at an average price of R\$ 87.94 per MWh).

In 2013, six tenders took place: (i) an energy adjustments tender, in which no energy was allocated and the maximum price was fixed at R\$ 163 per MWh; (ii) an A-0 tender in which no energy was allocated and the maximum price was fixed at R\$ 177.22 per MWh; (iii) an A-1 tender in which only 39% of the distributors requirements was allocated at average price of R\$ 177.22 per MWh; (iv) an A-3 tender with 332.5 MWh allocated to 39 wind power plants at average price of R\$ 124.43 per MWh; (v) an A-5.1 tender in which 690.8 MWh was allocated (46% hydroelectric plants and 54% of biomass thermal plants) at an average price of R\$ 124.97 per MWh; and (vi) an A-5.2 tender in which 1,599.5 MWh (33% of hydroelectric plants, 5% of biomass thermal plants and 62% of wind power plants) was allocated at an average price of R\$ 109.93 per MWh.

In 2014, an A-0 tender was held on April 30, which resulted in 2,046 MW at an average price of R\$ 268 per MWh. An A-3 tender was held on June 6, 2014, and of the 2,744.6 MW energy bid, 418 MW was assigned to the Santo Antonio hydroelectric plant at an average price of R\$ 121per MWh and 551 MW was allocated to 21 wind farms at an average price of R\$ 130 per MWh.

Sales of Capacity to Other Generation Companies

Generators can sell their energy to other generators through direct negotiation at freely-agreed prices and conditions.

Incentives and Penalties

Another change imposed on the electricity sector is the separation of the bidding process for "formerly existing power" and "new power" projects. The Brazilian government believes that a "new power project" needs more favorable contractual conditions such as long term power purchase agreements (15 years for thermal and 30 years for hydro) and certain price levels for each technology in order to promote investment for the required expansion. On the other hand, "formerly existing power plants," which include depreciated power plants, can sell their energy at lower prices under contracts with shorter terms.

Law 10,438/2002 created certain incentive programs for the use of alternative sources in the generation of electricity, known under the name of Proinfa. It assures the purchase of the electricity generated by Eletrobras for a period of 20 years and financial support from the Brazilian National Development Bank ("BNDES" in its Portuguese acronym), a state-owned development bank. Other programs include a discount of up to 50% on the distribution or transmission tariffs and a special exception for the customers with electricity demand in the range of 500 to 3,000 kW who decide to migrate to an unregulated environment, provided that such customers purchase electricity from generating companies using non-conventional sources of electricity.

Selling agents are responsible for paying the buying agent if they are unable to comply with their delivery obligations. ANEEL regulations set forth the fines applicable to electricity agents based on the nature and the materiality of the violation (including warnings, fines, temporary suspension of the right to participate in bids for new concessions, licenses or authorizations and forfeiture). For each violation, fines may be imposed for up to 2% of the concessionaire's revenues arising from the sale of electricity and services provided (net of taxes) in the 12-month period immediately preceding any assessment notice. ANEEL may also impose restrictions on the terms and conditions of agreements between related parties and, under extreme circumstances, terminate such agreements.

Decree 5,163/2004 establishes that the selling agents must assure 100% physical coverage for their energy and power contracts. This coverage must be made up of physical guarantees from its own power plants or through the purchase of energy or power contracts from third parties.

Among other aspects, ANEEL's Normative Resolution 109/2004 specifies that when these limits are not met, the generation companies and traders are subject to financial penalties. The determination of penalties is predicated on a 12-month period and the revenues obtained from the levying of the penalties are reverted to tariff modality within the ACR.

If the limits on contracting and physical coverage defined in the Trading Rules are not met, the relevant generation companies and traders are notified by the Superintendent of CCEE. Pursuant to the specific Trading Procedure, CCEE's agents are allowed to file an appeal to be evaluated by CCEE's Board of Directors who then decides whether to collect or to cancel the financial penalty.

Generation agents may sell power through contracts signed within the ACR or the ACL. Public Service Generators and IPPs must provide a physical coverage from their own power generation for 100% of their sales contracts. Self-producers generate energy for their own exclusive use and they may sell excess power through contracts with ANEEL's authorization. In both cases, the verification of physical coverage is accomplished on a monthly basis, predicated on generation data and on sales contracts for the last 12 months. Generation agents must pay penalties if they fail to provide physical coverage.

Regulation of Distribution Companies

Energy Purchases

In the regulated market, electricity distribution companies buy electricity through bids that are regulated by ANEEL and organized by CCEE. Distributors must buy electricity at public bids.

There are three types of regulated bids: new energy bids, formerly existing energy bids, and adjustment bids. The government also has the right to call special bids for renewable electricity (biomass, mini-hydro, solar and wind power). ANEEL and CCEE hold the bids annually. The contracting system is multilateral, with generating companies entering into contracts with all distributors who call for bids.

Distribution Tariffs to End Customers

Distribution tariff rates to end customers are subject to review by ANEEL, which has the authority to adjust and review these tariffs in response to changes in energy purchase costs and market conditions.

Distribution Tariff-Setting Process

When adjusting distribution tariffs, ANEEL divides the Annual Reference Value, the costs of distribution companies, into: (i) costs that are beyond the control of the distributor, such as energy purchases and taxes ("Parcel A costs"), and (ii) costs that are under the control of distributors ("Parcel B costs"), the Value-Added Distribution. Each distribution company's concession agreement provides for an annual adjustment.

The Concessions Law establishes three kinds of reviews for end customer tariffs: annual tariff resetting, and both ordinary and extraordinary tariff reviews.

Distribution companies' pricing is intended to maintain constant operating margins for the concessionaire by allowing for tariff gains due to Parcel A costs and by permitting the concessionaire to retain any efficiency gains achieved for defined periods of time. Tariffs to end customers are also adjusted according to the variation of costs incurred in purchasing electricity.

Ordinary tariff reviews take into account the entire tariff-setting structure for the company, including the costs of providing services and purchasing energy, as well as a return for the investor. The tariff review period is defined by distributors at the time of signing their respective concession agreement. Therefore, in Brazil, some distributors have a period of three years, most have four year periods and some have five year periods. This means the tariff review applies to all distributors, but with different time periods.

Under the previous methodology, the asset base for calculating an allowed return for the investor is the market replacement value depreciated during its accounting useful life, and the rate of return allowed for those assets is based on the WACC, for a "model company". The operating and maintenance costs reflected in the tariff are calculated based on the model company, which considers the special characteristics of each distribution concession area.

In November 2011, ANEEL approved a new methodology relating to the rules for the third cycle of periodic tariff revisions for electricity tariffs, effective from 2011 to 2014. There were significant changes with respect to the previous methodology:

- For operating costs, the model company is no longer used. The values defined in the previous cycle are adjusted by the
 variation in the number of customers, consumption and networks, discounting the productivity gains achieved by the
 distributors;
- A new methodology to estimate the distribution of productivity gains and to maintain the economic and financial balance over the tariff cycle was adopted; and
- A new incentive mechanism for improving the quality of service was introduced.

The law guarantees an economic and financial equilibrium for a company in the event that there is a substantial change in its operating costs. In the event that the Parcel A cost components increase significantly within the period between two annual tariff adjustments, the concessionaire may request that ANEEL pass those costs through to the end customers.

In June 2014, ANEEL published proposals to change the methodology for the fourth tariff cycle which included modifications to the WACC (proposed reduction from 11.36% to 10.85% real rate pre-tax), the regulatory asset base, X factor (a unique value for each distributor which reflects its recent efficiency gains, the management of its operating costs, and its service quality) and operating costs.

The public hearing took place on August 28, 2014 and written remarks were presented by the agents on September 1, 2014. After evaluating the contributions from distributors at Public Hearing 023/2014, ANEEL decided to review the proposed 12.26% WACC. As a result, the WACC increased from 11.36% to 12.26% (real rate pre-tax). The new rate was published in the Normative Resolution No. 648/2015 on March 2, 2015, effective retroactively to February 5, 2015.

Coelce is the first of our distribution companies to use the new methodology of the fourth tariff cycle, beginning in April 2015, with a new modification to the WACC rate. Ampla will begin to use the fourth tariff cycle methodology of for its tariff revision in March 2019.

Governmental Tariff Reduction Plan (Provisional Resolution 579/2012)

On September 12, 2012, the Brazilian government's Provisional Resolution 579/2012 ("MP 579") reduced tariffs for end customers and defined new concession renewal policies for generation and transmission companies.

In order to reduce the tariff, the Brazilian government proposed to eliminate two sector charges, the Global Reversal Reserve, which are funds to promote expansion in the electricity sector and to indemnify concessions, and the Fuel Consumption Bill, which is a subsidy to thermal generation companies mainly located in the northern region. It also reduced the CDE by 75%. The CDE provides energy development from alternative sources, promotes energy service globalization, and subsidizes the low income residential sub-class. These charges will be compensated directly with funds from the Brazilian government.

In addition, this resolution provides new concession renewal policies for generation and transmission companies, with concession contracts expiring before 2017 (20% of the generation companies). Although existing laws provided for the possibility of renewing such concessions, there was no clear guidance on the terms of the renewed concessions. With the new policy, energy purchases charges will be reduced due to the non-recognition of assets already amortized, and therefore if the concession-holders choose to renew under such terms, then they would only be able to recover costs related to operation and maintenance. Affected companies represent 23 GW of hydropower capacity and 85,000 kilometers of transmission lines. Approximately 65% of the affected generation companies and all of the affected transmission companies agreed with the new rules.

Legislation containing Provisional Resolution 579/2012 was approved by the Brazilian House of Representatives and was sent to the President of Brazil for signature under Law 12,783/2013. The tariff reduction plan aimed at reducing tariffs to end customers by 20% was passed on January 24, 2013 after an extraordinary tariff review of all distribution companies.

At the beginning of 2013, distributors had a deficit between regulated demand and energy suppliers. They were involuntary forced to buy the required energy to serve their regulated customers at the spot market. Due to this imbalance, on March 8, 2013, Presidential Decree 7,945/2013 authorized the pass-through of federal resources to distributors in order for them to pay part of the extra energy costs to which they had been involuntary exposed. The extra energy costs not paid by federal resources will be recovered via regulated tariffs in 2014 and 2015 as set forth by regulation of ANEEL, as adjusted by the SELIC interest rate.

In 2014, Decree 8,203 authorized the use of the CDE to cover part of the additional costs of distribution companies by involuntary exposure to the spot market. Thus, the decree allows the Treasury to anticipate CDE resources.

Involuntary exposure of distribution companies to spot market

In April 2014, the Brazilian government issued Decree 8,221/2014, which authorized the CCEE to enter into loans to cover the additional costs that affect distribution companies because of their involuntary exposure to high spot prices. CCEE negotiated two loans totaling R\$ 17.7 billion (Ch\$ 4,043 billion using the December 31, 2014 exchange rate of the exchange rate of Ch \$228.43 per R\$ 1.00) during 2014 which covered the additional costs of the period of February 2014 to December 2014. These loans will be paid by the CCEE through annual tariff adjustments that distribution companies will collect from customers over the next two years.

The first loan of R\$ 11.2 billion (Ch\$ 2,558 billion using the aforementioned rate of exchange), covered the deficits of February 2014 through April 2014 and was entirely distributed among distribution companies. The second loan of R\$ 6.6 billion (Ch\$ 1,507 billion) covered deficits from May 2014 through December 2014. Ampla and Coelce have received R\$ 871 million (Ch\$ 198 billion) of these loans. ANEEL does not believe additional loans will be needed for 2014.

Regulation in Transmission

Transmission lines in Brazil are usually very long, since most hydroelectric plants are usually located far away from the large centers of energy consumption. Today, the country's system is almost entirely interconnected. Only the states of Amazonas, Roraima, Acre, Amapá, Rondônia and a part of Pará still do not have access to the interconnected power system. In these states, supply is carried out by small thermal plants or hydroelectric plants located close to their respective capital cities, but the Brazilian government is gradually connecting these areas.

The interconnected power system provides for the exchange of power among the different regions when any region faces problems such as a reduction in hydroelectric power generation due to a drop in its reservoir levels. As the rainy seasons are different in the south, southeast, north and northeast of Brazil, the higher voltage transmission lines (500 kV or 750 kV) make it possible for locations with insufficient energy production to be supplied by generation centers located in a more favorable location.

Any electric power market agent that produces or consumes energy is entitled to use the basic network. Free-market customers also have this right, provided that they comply with certain technical and legal requirements. This is called "free access" and is guaranteed by law and by ANEEL.

The operation and management of the basic network is the responsibility of ONS, which is also responsible for managing energy dispatched from plants in optimized conditions, involving use of the interconnected power system hydroelectric reservoirs and thermal plants' fuel.

Environmental Regulation

The Brazilian constitution gives the federal, state and local governments power to enact laws designed to protect the environment, and to issue regulations under such laws. While the Brazilian government is empowered to enact environmental regulations, the state governments are usually more stringent. Most of the environmental regulations in Brazil are at the state and local level rather than at the federal level.

Hydroelectric facilities are required to obtain concessions for water rights and environmental approvals. Thermal electricity generation, transmission and distribution companies are required to obtain environmental approvals from environmental regulatory authorities.

Colombia

Industry Overview

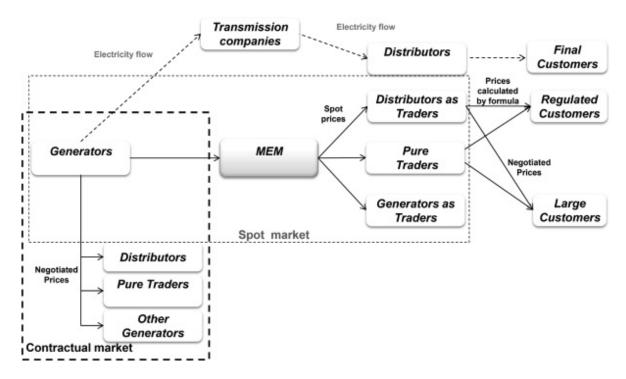

Industry Structure

The Wholesale Electricity Market in Colombia ("Colombian MEM" in its Spanish acronym) is based on a competitive market model and operates under open access principles. The Colombian government participates in this market through an institutional structure that is responsible for setting forth policies and regulations, as well as for exercising supervision and control powers in respect of market participants. The Colombian MEM relies for its effective operation on a central agency known as the Colombian Administrator of the Commercial Exchange System.

The Colombian NIS includes generation plants, the interconnection grid, regional transmission lines, distribution lines and end-customers.

There are two categories of agents, generators and traders, who are allowed to buy and sell electricity as well as related products in the Colombian MEM. All of the electricity supply offered by generation companies connected to the Colombian NIS and all of the electricity requirements of end-customers, whose demand is represented by trading companies, are traded on the Colombian MEM.

The following chart shows the relationships among the various participants in the Colombian MEM:

Generation activity consists of the production of electricity through hydroelectric, thermoelectric and all other generation plants connected to the Colombian NIS. The generation sector is organized on a competitive basis, with independent generators selling their output on the spot market or through private contracts with large customers, other generators and traders. Generation companies are required to participate in the Colombian MEM with all of their generation plants or units connected to the Colombian NIS with generation capacities of at least 20 MW. Generation companies declare their energy availability and the price at which they are willing to sell it. This electricity is centrally dispatched by the National Dispatch Center ("CND" in its Spanish acronym).

Trading consists of intermediation between the market participants that provide electricity generation, transmission and distribution services and the customers of these services, whether or not that activity is carried out together with other electricity-sector activities.

Electricity transactions in the Colombian MEM are carried out under the three following modes:

- 1. Energy spot market: short term daily market
- 2. Bilateral contracts: long term market; and
- 3. "Firm Energy."

"Firm Energy" refers to the maximum electric energy that a generation plant is able to deliver on a continual basis during a year, in poor hydrological conditions. The generator who acquires a Firm Energy Commitment ("OEF" in its Spanish acronym) will receive a fixed remuneration during the commitment period, which is explained in the "Incentives and Penalties" section below.

Transmission operates under monopoly conditions with a guaranteed annual fixed income that is determined by the new replacement value of the networks and equipment, and by the resulting value of bidding processes from the awarding of new projects for the expansion of the National Transmission System. This value is allocated among the traders of the National Transmission System in proportion to their energy demand.

Distribution is defined as the operation of local networks below 220 kV. Any customer may have access to a distribution network for which the customer pays a connection charge.

There is one interconnected system, the Colombian NIS, and several isolated regional and smaller systems that provide electricity to specific areas. According to the Colombian Mining and Energy Planning Agency, 96.5% of the Colombian population in 2013 received electricity through the public network.

Principal Regulatory Authorities

The Colombian Ministry of Mines and Energy is responsible for the policy-making of the electricity sector, which aims for a better use of the mining and energy resources available in Colombia, and in turn contributes to the country's social and economic development.

The Colombian Mining and Energy Planning Agency is responsible for planning the expansion of the generation and transmission networks.

The Colombian National Council for Economic and Social Policy ("CONPES" in its Spanish acronym) is the highest national planning authority and works as an advisory entity to the government in all aspects related to Colombia's economic and social development. It coordinates and directs the entities responsible for economic and social direction, through the study and approval of documents related to policy development.

The Colombian National Planning Department performs the functions of Executive Secretariat of the CONPES and therefore is responsible for coordinating and presenting the documents for discussion at meetings.

The Energy and Gas Regulatory Commission ("CREG" in its Spanish acronym) implements the principles of the industry set out by the Colombian Electricity Act. This commission is constituted by eight experts named by the Colombian President, the Colombian Ministry of Mines and Energy, the Colombian Ministry of Public Credit and the director of the Colombian National Planning Department or their delegates. Such principles are: efficiency (the correct allocation and use of resources and the supply of electricity at minimum cost); quality (compliance with technical requirements); continuity (continuous electricity supply without unjustified interruptions); adaptability (the incorporation of modern technology and administrative systems to promote quality and efficiency); neutrality (impartial treatment of all electricity customers); solidarity (the provision of funds by high-income customers to subsidize the subsistence consumption of low-income customers); and fairness (an adequate and nondiscriminatory supply of electricity to all regions and sectors of the country).

CREG is empowered to issue regulations that govern technical and commercial operations and to set charges for regulated activities. CREG's main functions are to establish conditions for gradual deregulation of the electricity sector toward an open and competitive market, approve charges for transmission and distribution networks and for regulated customers, establish the methodology for calculating maximum tariffs for supplying the regulated market, regulations for planning and coordination of operations of the Colombian NIS, technical requirements for quality, reliability and security of supply, and protection of customers' rights.

The National Operation Council is responsible for establishing technical standards to facilitate the efficient integration and operation of the Colombian NIS. It is a consultative entity composed of the CND's Director and generation, transmission and distribution company representatives.

The Commercialization Advisory Committee is an advisory entity which assists CREG with the commercial aspects of the Colombian MEM.

The Colombian Superintendency of Industry and Commerce advises the national government and participates in the formulation of policies to promote competition and protect consumers, and industrial property, among others. It also investigates, corrects and sanctions restrictive commercial competition practices, such as antitrust behavior, and oversees mergers of companies operating in the same industries in order to prevent excessive concentration or monopolies in certain industries.

The Colombian Superintendency of Domestic Public Services is responsible for the oversight of all public utility services companies. The Superintendency monitors the efficiency of all utility companies and the quality of services. The Superintendency can also assume control over utility companies when the availability of utility services or the viability of such companies is at risk. Other duties include (i) enforcing regulations, imposing penalties and generally overseeing the financial and administrative performance of public utility companies, (ii) providing accounting norms and rules for public service companies, and (iii) in general, organizing information networks and databases pertaining to public utilities.

The Colombian Ministry of Environment and Sustainable Development is responsible for the management of the environment and renewable natural resources. It is also responsible for guiding and regulating environmental planning as well as developing policies and regulations. The Colombian Ministry of Environment and Sustainable Development's goal is to recover, conserve, protect, and promote sustainable use of renewable natural resources, the environment of the nation, and to ensure sustainable development, without prejudice to the functions assigned to other sectors.

The Colombian Ministry of Environment and Sustainable Development, together with the Colombian President, aims to develop national environmental and renewable natural resource policies in order to ensure the right of Colombians to a healthy environment in which natural heritage and national sovereignty are protected.

The Electricity Law

General

In 1994, the Colombian Congress passed significant reforms affecting the public utilities industry. These reforms, contained in Law 142, known as the Public Utility Services Law, and Law 143, were the result of constitutional amendments made in 1991. These laws form the basic legal framework that currently governs the electricity sector in Colombia. The most significant reforms included the opening of the electricity industry to private sector participation, the functional segregation of the electricity sector into four distinct activities (generation, transmission, distribution and trading), the creation of an open and competitive wholesale electricity market, the regulation of transmission and distribution activities as regulated monopolies and the adoption of universal access principles applicable to transmission and distribution networks.

The Colombian Electricity Act regulates electricity generation, trading, transmission, and distribution (collectively, the "Activities"). Under the law, any company existing before 1994, domestic or foreign, may undertake any of the Activities. Companies established subsequent to such date can engage exclusively in only one of such Activities. Trading, however, can be combined with either generation or distribution.

Limits and Restrictions

The market share for generators and traders is limited. The limit for generators is 25% of the Colombian system's Firm Energy. The principal market share metric used by CREG to regulate the generation market is the percentage of Firm Energy that a market participant holds.

Additionally, if an electricity generation company's share of Colombia's total Firm Energy ranges from 25% to 30% and the market's Herfindahl Hirschman Index, a measure of market concentration, is at least 1,800, such company becomes subject to monitoring by the Colombian Superintendency of Domestic Public Services. If an electricity generation company's share of Colombia's total Firm Energy exceeds 30%, such company may be required to sell its share exceeding the 25% threshold.

Similarly, a trader may not account for more than 25% of the trading activity in the Colombian NIS. Limitations for traders take into account international energy sales. Market share is calculated on a monthly basis according to the trader's commercial demand and traders have up to six months to reduce their market share when the limit is exceeded.

Such limits are applied to economic groups, including companies that are controlled by, or under common control with, other companies. In addition, generators may not own more than a 25% interest in a distributor, and vice versa. However, this limitation only applies to individual companies and does not preclude cross-ownership by companies within the same corporate group.

A distribution company can hold over 25% of an integrated company's equity if the market share of the latter company accounts for less than 2% of the national generation business. A company created before the enactment of Law 143 is prohibited from merging with another company created after Law 143 came into effect.

A generator, distributor, trader or an integrated company (i.e., a firm combining generation, transmission and distribution activities) cannot own more than 15% of the equity in a transmission company if the latter represents more than 2% of the national transmission business in terms of revenues.

Regulation of Generation Companies

Concessions

The Colombian electricity sector was structurally reformed by Laws 142 and 143 of 1994. Under this new legal structure, economic activities related to the provision of the electricity service are governed by the constitutional principles of free market economic activity, free market private initiative, freedom to enter and leave, corporate freedom, free market competition and private property, with regulation and inspection, surveillance and control by the state.

According to Law 143, these constitutional principles of freedom are the general rule in the electricity sector business, while the concession is the exception. Different economic, public, private or mixed agents may participate in the sector's activities, which agents shall enjoy the freedom to develop their functions in a context of free market competition. In order to operate or start up projects, they must obtain from the competent authorities the necessary environmental, sanitation and water-right permits as well as other municipal permits and licenses. All economic agents may construct generation plants and their respective connection lines to the interconnection and transmission networks.

The Colombian government cannot legally participate in the execution and exploitation of generation projects. As a general rule, such projects are to be carried out by the private sector. The Colombian government is only authorized to enter into concession agreements on its own behalf relating to generation when there is no entity prepared to assume these activities on comparable conditions.

Dispatch and Pricing

The purchase and sale of electricity can take place between generators, distributors acting in their capacity as traders, traders (who do not generate or distribute electricity) and unregulated customers. There are no restrictions for new entrants into the market as long as the participants comply with the applicable laws and regulations.

The Colombian MEM facilitates the sale of surplus energy that has not been committed under contracts. In the wholesale market, an hourly spot price for all dispatched units is established based on the offer price of the highest priced energy dispatched unit for that period. The CND receives price bids each day from all the generators participating in the Colombian MEM. These bids indicate prices and the hourly available capacity for the following day. Based on this information, the CND, guided by an "optimal dispatch" principle (which assumes an infinite transmission capacity through the network), ranks the dispatch optimized during the 24-hour period, taking into consideration initial operating conditions, and determining which generators will be dispatched the following day in order to satisfy expected demand. The price for all generators is set as the most expensive generator dispatched in each hourly period under the optimal dispatch. This price-ranking system is intended to ensure that national demand, increased by the total amount of energy exported to other countries, will be satisfied at the lowest cost combination of available generating units in the country.

Additionally, the CND plans for the dispatch, which takes into consideration the limitations of the network, as well as other conditions necessary to satisfy the energy demand expected for the following day in a safe, reliable and cost-efficient manner. The cost differences between the "planned dispatch" and the "optimal dispatch" are called "restriction costs". The net value of such restriction costs is assigned proportionally to all the traders within the Colombian NIS, according to their energy demand, and these costs are passed through to the end customers. Some generators have initiated legal proceedings against the government arguing that recognized prices do not fully cover the costs associated with these restrictions because current regulations do not take into account all the costs of safe, reliable generation. However, CREG believes that Resolution 036-2010 modified the remuneration of hydro plants by assigning the opportunity cost to the spot price, which compensated for these costs.

During 2012 and 2013, the "Statute for situations of scarcity in the MEM as part of the operative regulations" was under evaluation. In 2014, CREG published Resolution 026 which enacted the Statute, which defines the rules of operation under critical supply conditions.

Sales by Generation Companies to Unregulated Customers

In the unregulated market, generation companies and unregulated customers sign contracts in which terms and prices are freely agreed. Typically, these agreements establish that the customer pays for the energy that it consumes each month without a minimum or maximum. The prices are fixed in Colombian pesos indexed monthly to the Colombian PPI. According to resolution CREG 131 of 1998, to be considered "unregulated", customers are required to have an average monthly power demand for six months of at least 0.1 MW, or a minimum of 55 MWh in monthly average energy demand over the prior six months.

Sales by Distribution Companies to Regulated Customers

The regulated market is served by traders and by distributors acting as traders, who bill all service costs, according to prices regulated by CREG. The scheme allows distributors to pass through the average purchase price of all the market transactions that affect the regulated market into the customer's tariff, thereby mitigating spot price volatility and providing an efficiency signal to the market. Additionally, CREG established a formula for the total cost of service, which transfers transmission, distribution, marketing costs, and physical losses costs to the regulated market.

Sales by Generation Companies to Traders for the Regulated Market

Traders in the regulated market are required to buy energy through procedures that ensure free market competition. For evaluating the bids, the buyer takes into account price factors as well as other technical conditions and commercial objectives to be defined before the contracting process. These agreements can be signed with different terms, such as: "pay for the amount contracted", "pay for the amount demanded with or without a limit", "pay the amount actually consumed", etc. Prices are denominated in Colombian pesos indexed monthly to the Colombian CPI.

Sales to Other Generation Companies

Generators can sell their energy to other generators through direct negotiation, at freely negotiated prices and conditions.

Regulatory Charges

Contribution by generation per Law 99 of 1993: Generation companies are obliged to pay monthly payments based on their generation to the regional autonomous corporations for environmental protection in areas where the plants are located and to the municipalities where the generation plants are situated. For more information, see "— Environmental Regulation" below.

Generation contribution to the Financial Support Fund for Energy for Unconnected Zones: Law 633 of 2000 (tax reform) states that generators must make a contribution of 1 Colombian peso to the Financial Support Fund for Energy for Unconnected Zones for every kilowatt dispatched on the Wholesale Energy Exchange. Initially, this requirement was effective until December 31, 2007 but it was extended to 2014 by Law 2,099 of November 2006.

Incentives and Penalties

Generators connected to the Colombian NIS can also receive "reliability payments" which are a result of the OEF that they provide to the system. The OEF is a commitment on the part of generation companies backed by its physical resource capable of producing firm energy during scarcity periods. A generator that acquires an OEF will receive fixed compensation during the commitment period, whether or not the fulfillment of its obligation is required. To receive reliability payments, generators have to participate in firm energy bids by declaring and certifying such firm energy. Until November 2012, the transition period, the firm energy supply for reliability purposes was assigned proportionally to the declared firm energy of each generator. Beyond the transition period, the additional firm energy required by the system is allocated by bids. During 2014, CREG adjusted requirements for thermal plants with the ability to utilize multiple fuels in order to allow them to use natural gas instead of petroleum-based liquid fuels. Projects under construction with delayed start dates are now able to exchange the terms of their OEF, under specific conditions, with geothermal power plants in order to include renewable energy (wind since 2011 and biomass since 2013).

During 2011, CREG published resolutions for the assignment of OEF for the periods from December 2014 to November 2015 and from December 2015 to November 2016. For the first of these periods, the OEF assigned this pro rata to the existing generators while, for the second, it carried out a second tender for the electricity sector on December 27, 2011.

During 2013, Resolution 062-2013 created incentives for thermal plants to back up their OEF with imported natural gas to guarantee their OEF for ten years beginning December 2015. The new resolution proposes the foundations of the remuneration for the group of thermal plants in order to develop the first regasification terminal in Colombia.

On March 10, 2014, CREG published Resolution 022/2014, which defined a transitory regulated revenue in order to motivate the system participants to build a LNG terminal. During 2014, the participants were beginning to contract trading and import agents; however, due to the delay in the construction phase, CREG has allowed thermal generators to comply with their OEF using alternative fuels.

The tender for firm energy for the period from November 2015 to December 2016 was made on December 27, 2011. Seven companies participated with a total of eight projects of which five were assigned at a price of US\$ 15.7 per MWh. The new projects are Río Ambeima (hydro, 45 MW), Carlos Lleras Restrepo (hydro, 78 MW), San Miguel (hydro, 42 MW), Gecelca 32 (thermal, 250 MW) and Tasajero 2 (thermal, 160 MW). The new assignments were made for a period of twenty years beginning on December 1, 2015.

In addition, on January 26, 2012, the auction was concluded for projects with long construction periods ("GPPS" in its Spanish acronym) which assigned OEFs for a period of twenty years to three hydroelectric projects and one thermal project. Two of these were assigned to new plants: Termonorte which will have a capacity of 88 MW by 2017 and the Porvenir II hydroelectric power plant which will have a capacity of 352 MW by 2018. The other two involved increases in OEF for plants already under construction and had available firm energy following the auction process conducted in 2008 (Sogamoso and Pescadero-Ituango hydroelectric plants). The process ended with assignment prices below the maximum defined for the auction in December (US\$ 15.70 per MWh), and were in connection with Termonorte (US\$ 14.90 per MWh); Porvenir II (US\$ 11.70 per MWh); Sogamoso and Pescadero-Ituango (US\$ 15.70 per MWh).

CREG regulated the reconfiguration auction scheme, under the methodology of reliability charge that allowed agents to change the beginning of the OEF by renouncing the "reliability payments" and paying a premium. XM published the results of the auction sale reconfiguration of OEF and Termocol, Amoya and Gecelca were the participating companies.

During 2012, CREG also issued the statement regarding OEF allocation for the period from December 2016 to November 2017. CREG indicated that (i) a tender for OEF allocation was not necessary due to the conditions of the system and (ii) the assignment schedule will be published once there is greater certainty regarding the execution dates Colombia-Panama interconnection agreement and the processes for importing natural gas. CREG Circular 045 states that this publication will be made after June 30, 2014.

Despite the statement, a tender was finalized in July 2012 for the reconfiguration of the OEF for the period from December 2012 to November 2013. The OEF was allocated to Termocol, which owns the Poliobras project (4.5 GWh per day) and to Amoyá, which owns the Isagen project (0.5 GWh per day). Such tenders are called when previously allocated OEFs exceed the projected demand for a certain period. The tender ended with a price margin of US\$ 0.60 per MWh, which is greater than the reliability load price of December 2012 to November 2013. Projects such as Ambeima and Porvenir II have lost their OEF.

Electricity Exports and Imports

Decision CAN 536 of 2002, CAN 720 of 2009, and CAN 757 of 2011, signed by the countries that participate in the Andean Nations Community ("CAN" in its Spanish acronym), Colombia, Ecuador, Bolivia and Peru, established the general framework for the interconnection of electrical systems that created a coordinated economic dispatch for the countries involved in the interconnections. Under this framework, the interconnection system between Colombia and Ecuador was inaugurated in March 2003. The two countries adopted a transitional regime pursuant to CAN 757, while adopting common standards in order to make such international transactions viable.

In addition to the interconnection with Ecuador, Colombia is also interconnected with Venezuela by three links, the most important being the Cuestecitas-Cuatricentenario line. During 2011 and 2012, there were energy transfers made from Colombia to Venezuela, through this line, under an agreement between the Presidents of both nations. The agreement allows for estimated transactions of 30 GWh per month, with a demand of 70 MW in periods of low and medium load and of 140 MW in periods of high load. The contract was signed on February 1, 2013 for a period of eleven months and was formalized by a contract between Isagen (Colombia) and Corpoelec (Venezuela).

There is also an energy interconnection project with Venezuela being carried out by the Institute of Planning and Promotion of Energy Solutions for Non-Interconnected Zones pursuant to an agreement between Colombia and Venezuela. Under the terms of this agreement, Colombia will sell electricity to Venezuela at a rate that is much cheaper than the costs to produce it. Venezuela will pay for the electricity with fuel rather than cash. This interconnection project is estimated to cost US\$ 8 billion and includes the construction of a 35.6 kilometer transmission line with a capacity of 34,500 volts in order to supply electricity to the region of San Fernando de Atabapo, Venezuela.

In the first half of 2012, CREG and the National Public Services Authority of Panama ("ASEP" in its Spanish acronym) issued resolutions that provided for enhancing the process for tendering of rights to construct the future interconnection line between Colombia and Panama.

The resolutions also supplement pre-existing resolutions by providing for provisions that allow Panamanian distribution companies to participate in future tenders in Colombia. The most important resolutions issued by Colombia are (i) CREG-002-2012, which attempts to resolve the discrepancies between firm capacity in Panama and the OEF in Colombia; (ii) CREG-004-2012, which outlines the exchanges in conditions of rationing; and (iii) CREG 057-2012, which is an operative agreement between the operators of the systems of Colombia and Panama. Panama has also issued parallel resolutions that enable Colombian companies to participate in tenders in Panama as international interconnection agents.

Emgesa, Isagen, Celsia and its subsidiary EPSA participated in the tender process to obtain line capacity rights in Panama that took place on August 21, 2012. These companies were able to participate in the tender by forming subsidiaries in Panama and complying with all requirements under Panamanian law, including the provisions related to guarantees.

In June 2012, Interconexión Eléctrica Colombia-Panamá ("ICP"), which is jointly owned by Interconexión Eléctrica de Colombia ("ISA") and the state-owned Empresa de Transmisión Eléctrica de Panamá ("ETESA"), was entrusted with the construction of an interconnection project and was allowed to join the tender for capacity rights. ICP submitted the base amount that is necessary to participate in the tender and proceeded to obtain prequalifications in July and August 2012. However, the tender process was suspended indefinitely on August 19, 2012. This was primarily due to financial reasons as the Panamanian government, citing budget constraints, refused to provide a firm commitment to contribute capital.

ICP is expected to continue to seek financial support in order to ensure the viability of the project and reduce uncertainties for the participants. With the support from the Interamerican Development Bank, ICP has hired a consultant to carry out a study that will explore alternatives plans that would result in more competitive energy prices and greater business opportunities. The Colombian government is also in conversations with its Panamanian counterpart in order to restart the process.

In November 2012, the Declaration of Santiago was signed by Chile, Colombia, Ecuador, Peru and Bolivia. The main purpose of this declaration was to facilitate regional electricity transactions by harmonizing regulatory frameworks of the member countries in order to connect the electricity networks of the signatory countries in the Pacific area.

Gas Market

Natural gas is important for the Colombian electricity sector, as natural gas is a key fuel for generation. The Colombian natural gas market operates under near monopolistic conditions and consists of a primary market, secondary market and short-term market. Supply contracts depend on a balance between supply and demand for the next five years, which is calculated by the regulatory authority every year. Transportation contracts are traded under bilateral negotiation schemes or through auctions.

This regulatory framework is the result of a former proposal that sought to reform the wholesale market for natural gas and ensure that it operates under the principles of transparency and liquidity. This new framework also outlines entities that are eligible to participate in each market, the types of permitted transactions, and the kind of contracts that may be entered into. It even seeks to create standardized force majeure provisions for such contracts in order to clarify the responsibilities of the parties. The new rules took effect in August 2013.

During 2014, CREG defined the rules for choosing the Market Manager, invited participants for the subsequent selection as natural gas Market Manager, and regulated the creation of trust instruments in their care.

Also, advancements were made in defining the methodology to be used for calculating the discount rate, based on the WACC to be applied in natural gas transmission and distribution, fuel gas and LPG transport via pipelines, transmission and distribution of electricity in the national grid, and the generation and distribution of electricity in areas that are not connected to the Colombian NIS.

During the second half of 2014, and in accordance with the new regulatory framework, work continued on the second phase of marketing natural gas, which describes short and long term gas bilateral supply negotiations and aftermarket supply negotiations as well as transportation.

As a result of the implementation of the indexes in Annex IV of CREG Resolution 089 of 2013, prices of signed, long-term gas contracts were adjusted in November 2013, yielding an increase of around 25% for gas supply contracts in Guajira. CREG requested that agents resume the discussion to achieve a consensus among all participants in the natural gas chain to introduce tariffs for supply contracts and final rate regulated market.

Regulation of Distribution Companies

Distributors (or network operators) are responsible for planning, investing, operating, and maintaining electricity networks below 220 kV. These include regional transmission systems and local distribution systems. Any customer may access the distribution network by paying a connection fee. Under this scheme, the distributor is a passive agent who does not buy energy and is only responsible for transporting it and controlling the technical energy losses.

Distribution Tariff-Setting Process

CREG regulates distribution prices that allow distribution companies to recover costs, including operating, maintenance and capital costs under efficient operations. Distribution charges are set by CREG for each company based on the replacement cost of the existing distribution assets, the cost of capital, as well as operational and maintenance costs that depend on the voltage level.

The methodology for remunerating the distribution business segment was defined by CREG in 2008. The WACC was set at 13.9% before taxes for assets operating above 57.5 kV and 13.0% before taxes for assets operating under this threshold. CREG also defined a methodology for the calculation of distribution charges by creating an incentive scheme for administrative, operating and maintenance costs, service quality and energy losses. During 2009, after auditing the information reported by the companies, CREG established the distribution charges applicable until October 2013.

Distribution charges are set for a five-year period and are updated monthly according to the PPI, and defined for four different voltage levels which are applied depending on the customer's connection point as follows:

- Level 1: less than 1 kV:
- Level 2: at least 1 kV but less than 30 kV:
- Level 3: at least 30 kV but less than 57.5 kV; and
- Level 4: at least 57.5 kV but less than 220 kV.

The review of regulated distribution charges began in 2013 with the publication of the remuneration bases methodology proposed by CREG Resolution 043 of 2013. Such bases were complemented by the development of the Purposes and Guidelines for the Distribution Remuneration for the period 2015-2019, which was presented in CREG Resolution 079 of 2014. This resolution was defined by the Colombian Ministry of Mines and Energy and seeks to ensure timely expansion and adequate assets. According to this, such bases incorporate replacement incentives and an investment plan that will allow the incorporation of newer technology, improve service quality and control energy losses. The new distribution methodology will be published in the second quarter of 2015.

Additionally, the CREG has issued resolutions CREG 083 of 2014 and 112 of 2014 which define the methodology to calculate the WACC for electricity transmission and distribution as well as natural gas distribution and transport.

Incentives and Penalties

In December 2011, CREG defined a coverage mechanism requiring traders who are the end customers, to guarantee distributors the payment of the regional transmission system and local distribution system tariffs. CREG established that these kinds of traders must use one of the following instruments, in order to provide security of payment to distributors: bank guarantees, stand-by letters of credit letters (either domestic or international) and monthly prepayments. These mechanisms will be in effect for three months after the issuance of the new trading remuneration methodology.

At the same time, CREG defined new regulation related to non technical losses. It defined that the companies that have higher losses than those approved in current regulation should design a plan to reduce them. CREG approved new criteria for losses that will be included in the tariff for companies that control losses at an efficient level, and established that non technical losses above the efficient level must be assumed by both distributors.

The distribution business has tariff incentives contingent on the quality of service. Distributors also have to make compensatory payments to customers when they cannot meet the established continuity criteria. In 2012, CREG established the new quality of service regulation for the regional transmission systems. Specifically, it defined compensations for energy that was not provided and service interruptions in the regional transmission systems.

Also in 2012, CREG defined the power quality regulation. Overall, it established minimum quality standards and designed a mechanism in which customers can present their claims to distribution companies and receive compensation if standards are not accomplished by the company. This mechanism introduces new measurement requirements.

Regulation in Transmission

Transmission companies which operate at least 220 kV grids constitute the National Transmission System ("NTS"). They are required to provide access to third parties on equal conditions and are authorized to collect a tariff for their services. The transmission tariff includes a connection charge that covers the cost of operating the facilities, and a usage charge, which applies only to traders.

CREG guarantees an annual fixed income to transmission companies. Income is determined by the new replacement value of the network and equipment and by the resulting value of the bidding processes of awarding new projects for the expansion of the NTS. This value is allocated among the traders of the NTS in proportion to their energy demand.

The review of regulated transmission charges began in 2013 with the publication of the remuneration bases methodology proposed by CREG Resolution 042 of 2013. Such bases were complemented by the development of the Purposes and Guidelines for the Transmission Remuneration for the period 2015-2019, which was presented in CREG Resolution 078 of 2014. This resolution was defined by the Colombian Ministry of Mines and Energy and seeks to ensure timely expansions and adequate assets. It is expected that the new transmission remuneration methodology will be issued in the second quarter of 2015.

The expansion of the NTS is conducted according to model expansion plans designed by the Colombian Mining and Energy Planning Agency and pursuant to bidding processes opened to existing and new transmission companies, which are handled by the Colombian Ministry of Mines and Energy in accordance with the guidelines set by CREG. The construction, operation and, maintenance of new projects is awarded to the company that offers the lowest present value of future cash flows needed for carrying out the project.

In 2012, CREG established the new quality of service regulation for the NTS. It defined incentives for failure to provide energy and required companies to compensate customers, by reducing their charges, for service interruptions in the NTS.

Trading Regulation

The retail market is divided into regulated and unregulated customers. Customers in the unregulated market may freely and directly enter into electricity supply contracts with a generator or a distributor, acting as traders, or with a pure trader. The unregulated customer, which for 2013 represented about 33% of the market, consists of customers with a peak demand in excess of 0.1 MW or a minimum monthly energy consumption of 55 MWh.

Trading involves reselling the electricity purchased in the wholesale market. It may be conducted by generators, distributors or independent agents, which comply with certain requirements. Parties freely agree upon trading prices for unregulated customers.

Trading on behalf of regulated customers is subject to the "regulated freedom regime" under which tariffs are set by each trader using a combination of general cost formulas given by CREG and individual trading costs approved by CREG for each trader. Since CREG approves limits on costs, traders in the regulated market may set lower tariffs for economic reasons. Tariffs include, among other things, energy procurement costs, transmission charges, distribution charges and a trading margin.

The trading tariff formula became effective on February 1, 2008. The main changes to this formula were the establishment of a fixed monthly charge and the introduction of reduction costs of non-technical energy losses in the trading charges. In addition, CREG allows traders in the regulated market to choose tariff options to manage tariff increments.

In May 2009, a company called Derivex was created so as to incorporate an energy derivatives market. In October 2010, Derivex began its operation with the first electricity forward derivative contract.

In December 2011, CREG issued the Retailing Code, which includes specific rules that improve retailers' relations with other electricity market members. It established new regulations about energy measurement, non-technical losses, the retailers' connection to the wholesale electricity market, and the retailers' credit risks, among other considerations.

In October 2013, CREG published a new resolution that defines "technical equity" (equity corresponding to the minimum equity that allows agents to perform operations on the wholesale market, either as sellers or buyers) as a mechanism to rate the technical abilities of companies in order to protect the wholesale market from unstable companies. According to the new rule, any transaction in the spot market has to be lower than the technical equity of the companies involved in the transaction.

In order to improve wholesale price formation, CREG has been designing a new energy procurement scheme based on long term energy bids, known as Organized Market ("MOR" in its Spanish acronym). The final rules for this new system are not available, but CREG issued a draft version of the mechanism through Resolution 117-2013, and the deadline for consultations has passed. It is expected that the final resolution on MOR will be issued in early 2015, and the first auction will be called for by the end of the year.

The revision of Regulated Trading Charges has been on CREG's agenda for several years. CREG Resolution 044 of 2012 proposed the general criteria and methodology to calculate trading remuneration, and it is expected that the CREG will issue new methodology in the first quarter of 2015.

Tariffs to End Customers

The energy trader is responsible for charging the electricity costs to end customers and the transfer of their payments to the industry's agents. The tariffs applied to regulated customers are calculated according to a formula established by CREG. This formula reflects the costs of the industry (generation, transmission, distribution), depending on the customer's connection level, trading losses, constraints, administrative costs, and market operating costs. The pricing formula is currently under review and CREG Resolution 135 of 2014 establishes the basis of the studies to determine the unit cost formula of providing service to regulated customers. It is expected that the commission will issue the formula by the end of 2015.

There are different factors that affect the final costs of the service. Subsidies and/or contributions are applied according to the socio-economic level of each customer, and when subsidies exceed contributions, the Colombian government compensates for the difference. Another factor that affects the final tariff is the distribution area, which establishes a single distribution tariff for the distribution companies in adjacent geographic zones.

In addition, to subsidize the value of electricity for the most financially vulnerable residential customers residing in the least developed rural areas, the Colombian Ministry of Mines and Energy established the Social Energy Fund ("FOES" in its Spanish acronym). Decree 011 2012 regulates FOES as defined in article 103 of Law 1450 of 2011 (published in 2012). FOES offsets CP\$ 46 kWh of the price of electricity for the above mentioned customers.

Renewable Energy Law

On May 13, 2014, the Renewable Law (Law 1,715) was published. The new law establishes a general legal framework and created a fund intended to promote the development of non-conventional renewable energy, energy efficiency and programs designed to reduce electricity demand. One of its principal objectives is the progressive replacement of diesel generation in non-interconnected and isolated areas, in order to reduce energy cost and greenhouse gas emissions.

During the second half of 2014, the government worked on several aspects of the regulation, and as a result, in December the Colombian Ministry of Mines and Energy enacted Decrees 2492 and 2469 establishing guidelines for the demand response mechanism and the sale of surplus energy by self-generators.

Environmental Regulation

The environmental framework in Colombia was established by Law 99/1993, which also established the Colombian Ministry of the Environment (now the Colombian Ministry of Environment and Sustainable Development) as the authority for determining environmental policies. The Colombian Ministry of Environment defines issues, executes policies and regulations that focus on the recovery, conservation, protection, organization, administration and use of renewable resources.

Any entity planning to develop projects or activities relating to generation, interconnection, transmission or distribution of electricity that may result in environmental deterioration must first obtain environmental permits and licenses and also establish environmental management plans.

According to Law 99/1993, generation plants that have a total installed nominal capacity above 10 MW are required to contribute to the conservation of the environment. Hydroelectric power plants must pay 6% of their generation and thermoelectric plants must pay 4% of their generation in addition to a tariff that is annually determined. This payment is made monthly to the municipalities and environmental corporations where these facilities are located.

Law 1450 of 2011 issued the National Development Plan 2010-2014. The plan establishes that between 2010 and 2014, the government must develop strategies for environmental sustainability and for the prevention of environment risks. These include measures such as the national plan for adaptation to climate change, the environmental licensing process and environmental impact studies.

In 2011, Institutional Decree 3,570 established a new regulatory structure for the environment, creating the Colombian Ministry of Environment and Sustainable Development (previously, the functions of the Ministry of the Environment were established in conjunction with functions of the Ministry of Housing). The main objective of the Colombian Ministry of Environment and Sustainable Development is the formulation and management of environmental and renewable natural resource policies. In 2012, the Colombian Ministry of Environment and Sustainable Development published several resolutions. Resolution 1517 of 2012 established the procedures relating to the Environmental Compensation for Biodiversity Loss while Decree 1640 of 2012 set forth regulations for the planning and management of hydrographic basins. In addition, Resolution 1526 of 2012 established the procedural requirements for the subtraction of the forest areas protected by Law 2 of 1959.

In 2012, the Colombian Ministry of the Environment and Sustainable Development included the NAMA (Nationally Appropriate Mitigation Action) in the CDM (Clean Development Mechanism) & NAMA Portfolio.

NAMA and CDM are two mechanisms established by the United Nations in order to promote the developments of project which reduce emissions of greenhouse gases in certain countries (listed in Exhibit I of the Kyoto Protocol), for example, electric vehicles promoted by Endesa Spain and Enersis.

The Colombian Ministry of the Environment and Sustainable Development publishes progress reports annually for the portfolio projects of CDM and NAMA under development in Colombia. This allows interested parties a chance to buy CERs (Certified Emission Reduction) in connection with CDM projects and also provides financing opportunities in the case of NAMA projects.

In December 2012, the Colombian Mining and Energy Planning Agency published Resolution 0563, which establishes the procedure for the exclusion of sales tax for the programs or activities related to reduced energy consumption and energy efficiency.

In August 2013, the Colombian National Planning Department issued CONPES Document 3762, a policy text that established guidelines for the identification and prioritization of infrastructure projects that are of national and strategic interest in the energy, mining, oil, gas, and transportation sectors. It defines the relevant issues related with the formalities and procedures for acquiring land, prior consultation, community relations, environmental licensing and permits, and institutional coordination, all of which need to be resolved in order to assure the correct formulation and development of those projects.

During 2014, environmental regulation focused primarily on reducing the water contamination caused by discharged water and ecological flow.

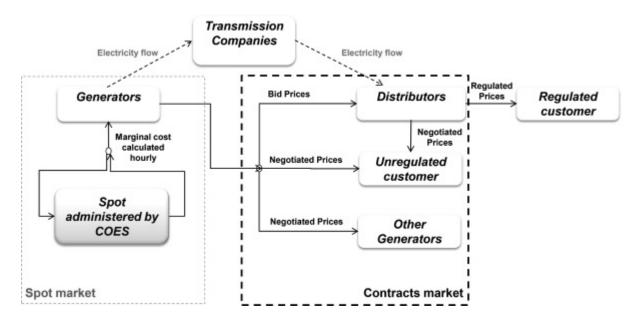

Due to national discussions about environmental licensing, the Colombian Ministry of Environment and Sustainable Development enacted Decree 2041 which aims to reduce the timing needed to receive the necessary licenses.

Peru

Industry Overview

Industry Structure

In the Peruvian Wholesale Electricity Market ("Peruvian MEM" in its Spanish acronym) there are four categories of local agents: generators, transmitters, distributors and large customers. The following chart shows the relationships among the various participants in the SEIN.

The generation segment is composed of companies that own generation plants. This segment is noted for being a competitive market in which prices tend to reflect the marginal cost of production. Electricity generators, as energy producers, have capacity and energy sale commitments with their contracted customers. Generators may sell their capacity and energy to both distributors and unregulated customers.

The energy received by a generator's customers does not necessarily coincide with the energy produced by that supplier since the generation plants' production is allocated by the COES, through a centralized dispatch. The transfer cost is minimized by reviewing the variable production costs of each power plant, regardless of their contractual commitments. The only exception to this rule is the natural gas plants, which declare the natural gas price once a year for dispatch purposes. Therefore, there is a short-term market also managed by the COES, where an economic balance is made between the energy produced and the consumption required by the generators' customers.

The generation plants' production and the customers' energy consumption at the nodal short-term marginal cost are valued, and the deficit generators pay for the energy purchased from surplus generators. The balance made in connection with energy sales is also carried out with respect to capacity, in which case the price of the capacity corresponds to a price regulated by the Osinergmin.

In 2008, due to gas transport and electricity transmission problems, Osinergmin defined a new rule to calculate spot prices. Decree 049/2008 established two models, one which represented a theoretical dispatch without considering any restrictions and another that considered real dispatch with restrictions. The spot price is obtained from the theoretical dispatch (known as "ideal marginal cost"), and the additional operating costs resulting from system restrictions are paid through demand from the affected generators through a mechanism established by the authority. The "ideal marginal cost" regime was extended until December 31, 2016.

The settlements made by the COES also include payments and/or collections for supplementary services such as frequency and tension regulation. They also consider compensation for operating cost overruns, such as the operation at minimum load, random operational tests, etc.

Regulation DS 027-2011-EM of June 2011 established that as of January 2014, several participants may also act as buyers in the short-term market, in addition to the generators. These other participants include distributors (in order to meet the demand of their unregulated customers), large customers with demand over 10 MW, and a group of unregulated customers whose aggregate demand exceeds 10 MW. This regulation is now suspended until the wholesale market prices return to previous levels (anticipated to occur after 2017).

The transmission system is made up of transmission lines, substations and equipment for the transmission of electricity from the production points (generators) to the consumption centers or distribution points. Transmission in Peru is defined as all lines or substations with a tension higher than 60 kV. Some generation and distribution companies also operate sub-transmission systems at the transmission level.

Electricity distribution is an activity carried out in the concession areas granted to different distribution companies. Customers with a capacity demand lower than 200 kW are considered regulated customers, and their energy supply is considered to be a public service. Customers whose capacity demand is within the range of 200-2,500 kW are free to choose whether to be considered regulated or unregulated customers. Once this type of customer chooses an option, the customer must remain in that category for at least three years. If the customer wants to change its category from regulated to unregulated customer, or vice versa, at least one year advance notice must be provided.

There is only one interconnected system, the SEIN, and several isolated regional and smaller systems that provide electricity to specific areas. According to the National Institute of Statistics of Peru ("INEI" in its Spanish acronym) as of December 2012, 91.2% of the population obtained electricity through the public network.

Principal Regulatory Authorities

The Peruvian Ministry of Energy and Mining ("MINEM" in its Spanish acronym) defines energy policies applicable nationwide, regulates environmental matters applicable to the energy sector and oversees the granting, supervision, maturity and termination of licenses, authorizations and concessions for generation, transmission, and distribution activities. On August 10, 2012, Regulation DS 030-2012-EM amended the articles of organization and defined the activities of MINEM and the Natural Gas Management Department.

The Agency for the Promotion of Private Investment ("PROINVERSIÓN" in its Spanish acronym) is a public entity responsible for attracting private investment in public utilities and infrastructure works. It also advises provides advice to investors in making their investment decisions.

Osinergmin, is an autonomous public regulatory entity that controls and enforces compliance with legal and technical regulations related to electrical and hydrocarbon activities, controls and enforces compliance with the obligations stated in the concession contracts, and is responsible for the preservation of the environment in connection with the development of these activities. Osinergmin's Tariff Regulatory Bureau has the authority to publish the regulated tariffs. It also controls and supervises the bidding processes required by distribution companies to purchase energy from generators.

The COES coordinates the SEIN's short, medium and long-term operations at minimum cost, maintaining the security of the system and optimizing energy resources. It also plans for the SEIN's transmission development and manages the short-term market.

The National Institute for Defense of Competition and Intellectual Property ("INDECOPI" in its Spanish acronym) is responsible for promoting competition, protecting customer rights and safeguarding all forms of intellectual property.

The General Electricity Authority ("DGE" in its Spanish acronym) is the regulatory technical entity responsible for evaluating the electricity sector, and proposes the necessary regulations for the development of the electricity generation, transmission and distribution activities.

The Peruvian Ministry of Environment ("MINAM" in its Spanish acronym) defines environmental policies applicable nationwide and is the head of the national environmental management system, which includes the National Environmental Impact Assessment System, the National Environmental Information System, the Protected Natural Areas System, as well as the management of natural resources in its area of competence, biodiversity and climate change, among others.

The Electricity Law

General

The general legal framework applicable to the Peruvian electricity industry includes: the Law of Electricity Concessions (Decree Law 25,844/1992) and its ancillary regulations, the Law to Secure the Efficient Development of Electricity Generation (Law 28,832/2006), the Technical Regulation on the Quality of the Electricity Supply (Supreme Decree 020/1997), the Electricity Import and Export Regulation (Supreme Decree 049/2005), the Antitrust Law for the Electricity Sector (Law 26,876/1997), and the law that regulates the activity of Osinergmin (Law 26,734/1996, together with Law 27,699/2002).

Some of the characteristics of the regulatory framework are (i) the separation of the three main activities: generation, transmission and distribution; (ii) freely-determined prices for the supply of energy in competitive market conditions; (iii) a system of regulated prices based on the principle of efficiency together with a bidding regime; and (iv) private operation of the interconnected electricity systems subject to the principles of efficiency and quality of service.

Law 29,852/2012 and Regulation 021-2012-EM created the Hydrocarbons Energy Security System and the Fund of Social Energy Inclusion ("FISE" in its Spanish acronym). These laws also created a system of social compensation and universal service for the most vulnerable sectors of the population which will be financed by surcharges on the electricity billing of unregulated customers (equivalent to the surcharge that exists today for regulated customers on the Electrical Social Compensation Fund, "FOSE" in its Spanish acronym), transport surcharges for hydrocarbon-derivate liquids and natural gas multi-pipelines and surcharges on the use of the natural gas pipeline.

Osinergmin and distribution companies are the administrators of the FISE, which directs funds to (i) the massification of natural gas to vulnerable sectors, (ii) develop new energy sources like photovoltaic cells, solar panels, etc., and (iii) supply liquefied petroleum gas ("LPG") to vulnerable sectors.

Law 29,969/2012 provides for the massification of natural gas. State electricity distributors are authorized to carry out natural-gas programs, including the distribution of natural gas in their concession area. They are also able to associate with companies specializing in the development of gas distribution projects. Within a maximum period of three years from the start of the gas distribution, MINEM will start the process of promoting private investment by granting gas distribution concessions through the pipeline network.

Law 29,970/2012 guarantees energy security and promotes the development of the petro-chemical complex in the south of the country. Under this law, the following agendas have been declared as a matter of national interest: (i) the guarantee of energy security, (ii) the transport of ethane to southern Peru; and (iii) the construction of regional pipelines in Huancavelica, Junín, and Ayacucho and their connection to existing gas pipelines.

Limits and Restrictions

Since the enactment of the Law of Electricity Concessions, vertical integration is restricted, and activities in the generation, transmission and distribution segments must be developed by different companies. The Antitrust Law for the Electricity Sector regulates the cases in which vertical and horizontal integration is admissible.

An antitrust authorization is compulsory for those electricity companies that hold more than 5% of another business segment, either before or as a result of a merger or integration. An authorization is also required for the horizontal integration of generation, transmission and distribution activities which result in a market share of 15% or higher of any business segment, either before or as a result of any operation.

Such authorizations are granted by the Institute for Defense of the Consumer and Intellectual Property, using the market share information provided by Osinergmin.

Regulation of Generation Companies

Concessions

Generation companies that own or operate a power plant with an installed capacity greater than 500 kW require a concession granted by the MINEM. A concession for electricity generation activity is a unilateral permit granted to the generator by the MINEM. Authorizations are granted by the MINEM for an unlimited period of time, although their termination is subject to the same considerations and requirements as the termination of concessions under the procedures set forth in the Law of Electricity Concessions, and its related regulations.

In order to receive a concession, the applicant must first request for a temporary concession of two years, and must subsequently apply for a definitive concession. In order to receive an authorization, the applicant must file a petition before the MINEM. If the petition is admitted and no opposition is presented, the MINEM grants the authorization to develop generation activities for unlimited time, subject to compliance with applicable regulations.

Dispatch and Pricing

The coordination of electricity dispatch operations, the setting of spot prices and the control and management of economic transactions that take place in the SEIN are controlled by COES. Generators can sell energy directly to large customers and buy the deficit or transfer the surplus between contracted energy and actual production in the pool at the spot price. Resolution 080-2012-OS/CD (2012) established the criteria and methodology for deciding the real-time operation under exceptional conditions as declared by the MINEM.

Sales by Generation Companies to Unregulated Customers

Sales to unregulated customers are carried out at mutually agreed prices and conditions, which include tolls and compensation for the use of transmission systems and, if necessary, to distribution companies for the use of their network.

Sales to Distribution Companies and Certain Regulated Customers

Sales to distributors can be under bilateral contracts at a price no greater than the regulated price in the case of regulated customers, or at an agreed price in the case of unregulated customers. In addition to the bilateral method allowed under the Law of Electricity Concessions, Law 28,832 has also established the possibility that distributors may meet their unregulated or regulated customers' demand under contracts signed following a capacity and energy supply tender process.

Sales of Capacity to Other Generation Companies

COES determines a firm capacity for each power plant on an annual basis. Firm capacity is the highest capacity that a generator may supply to the system at certain peak hours, taking into consideration statistical information and accounting for time out of service for maintenance purpose and for extremely dry conditions in the case of hydroelectric plants.

A generation company may be required to purchase or sell capacity in the spot market, depending upon its contractual requirements in relation to the amount of electricity to be dispatched from such company and to its firm capacity.

Regulatory Charges

In addition to taxes applicable to all industries (mainly an income tax and a value added tax), the electricity industry operators are subject to a special regulation contribution that compensates the costs incurred by the state in connection with the regulation, supervision and monitoring of the electricity industry. The applicable rate for this contribution is up to 1% of the annual billing of each company and the funds levied are distributed proportionally to the MINEM and Osinergmin.

Generators that also have hydroelectric plants pay a water royalty as a function of the hydroelectric energy produced and the regulated energy tariff at peak hours.

Tenders Promoted by the State

During 2009, MINEM carried out several studies which concluded that there will be lack of power generation capacity in the system in the near future. MINEM recommended the construction of new power plants that would serve as backup in order to guarantee the flow of electricity to the system and avoid blackouts. As a result, PROINVERSIÓN carried out a public bid in August 2010, seeking to secure investments for three projects located in Talara, Trujillo and Ilo that would add another 800 MW to the system. The bid resulted in two of the projects being awarded: Talara (200 MW, for EEPSA, an Enersis subsidiary) and Ilo (400 MW, for Enersur, an unrelated company). These plants receive regular payments for being permanently available to operate and provide energy to the SEIN whenever the COES calls on them and will also be reimbursed for the fuel costs incurred for generating electricity. The Trujillo generation facility was later replaced by the Eten generation facility and awarded to Planta de Reserva Fría de Generación de Eten S.A. (200 MW) (the "Cold Reserve Project").

An international tender was held in 2012 for the concession for the Cold Reserve Project for the Pucallpa (Ucayali) and Puerto Maldonado (Madre de Dios) plants, which were awarded to Consorcio Energía Perú S.A. The construction period of the plants will be 30 months from the signing of the contracts, and the concession covers a period of 20 years plus the construction period. The Pucallpa thermal plant will require an investment of approximately US\$ 31.5 million and will have a capacity between 35 and 40 MW, covering 80% of the energy demand. The Puerto Maldonado thermal plant will require an investment of approximately US\$ 18.5 million, and will have a capacity between 15 and 18 MW, covering 100% of the energy demand.

On March 21, 2013, PROINVERSIÓN held an international public tender to promote private investments in the Hydroelectric Plants project (CH Molloco—280 MW), which is located in the hills of the Arequipa region. It was awarded to the Corsan Corviam – Engevix – Enex partnership.

Services provided by generation, transmission, and distribution companies must comply with technical standards stated in the Technical Regulations on the Quality of the Electric Supply. Failure to do so might result in the imposition of fines by Osinergmin.

Generators receive a capacity payment whose main component is the annuity of a peak-load plant. However, to be eligible to receive this payment, plants have to be part of the reserve margin established annually by Osinergmin. The capacity ranking is constructed in base of firm power of every power plant connected to the system and their relative efficiency (ordered by variable costs). Only plants included in the ranking as required to cover the peak demand plus the reserve margin receive the capacity payment. Every year, Osinergmin sets the power price that shall be assigned and paid to each generator pursuant to this concept.

Electricity Exports and Imports

A 220 kV transmission line has been implemented for the interconnection with Ecuador, with a limited capacity of 160 MW. However, the line has not operated continuously because of regulatory issues. During June and August 2011, Peru imported energy from Ecuador due to the lack of generation in northern Peru and transmission problems in the SEIN in that zone. In 2012, Peru imported 4.5 GWh of electricity from Ecuador due to the maintenance of the Talara Zorritos line (3.9 GWh in February 2012) and the TGN4 Malacas power plant (0.6 GWh in March 2012). During 2014, electricity exports to Ecuador totaled 12.7 GWh.

Internal regulations were also approved for the application of Decision 757 of the Andean Community of Nations ("CAN" in its Spanish acronym), which establishes that when bilateral electricity transactions are carried out with other CAN countries, the Economic Operation Committee of the SEIN should send weekly reports to the MINEM and to Osinergmin demonstrating that priority has been given to supplying the domestic market (Supreme Decree 011-2012-EM).

In addition to the interconnection with Ecuador, the governments of Peru and Brazil in 2010 signed the "Agreement between the Republic of Peru and the Federal Republic of Brazil for the supply of electricity to Peru and export of surpluses to Brazil" with the main purpose of exploiting Peruvian hydroelectric resources in the Amazon basin. In January 2012, Peru created a commission to handle the aspects contemplated in that agreement. The general framework establishes that the accumulated capacity of the generation plants that can be committed to export to Brazil is a maximum of 7,200 MW and dispatch will have the following order of priority: (i) the Peruvian regulated market, (ii) the Peruvian unregulated market, and lastly, (iii) the Brazilian market. As of the date of this Report, the process is on hold, and is expected to be approved by the Peruvian congress that currently is under the study of the Commission of Andean, Amazonian and Afro-Peruvian Peoples, Environment and Ecology.

The governments of Peru and Chile have established a bilateral working group to discuss energy matters. The purpose of the working group is to identify and take advantage of the potential synergies between the two countries. The first few meetings of this group took place in 2011. At the request of the presidents of both nations, the working group is expected to propose a framework for an agreement in connection with both countries' electricity integration that would establish the general rules for energy exchanges between them. As of the date of this Report, both countries have conducted negotiations but a final agreement is still pending.

Regulation of Distribution Companies

Bids for Supplying Regulated Customers

The Law to Secure the Efficient Development of Electricity Generation established a bidding regime for the acquisition of energy and capacity by distributors through competitive tenders and firm prices. The regulator approves the general conditions and establishes a price cap for the bidding process. In addition, distributors can sign bilateral short term contracts with generators in order to buy power blocks not covered by tenders and to fill any future imbalance.

The new contracts to sell energy to distribution companies for resale to regulated customers must be made at fixed prices determined by public bids. Only a small part of the electricity purchased by distribution companies (included in old contracts) is still maintained at node prices. These are set annually by Osinergmin and are the maximum prices for electricity purchased by distribution companies that can be transferred to regulated customers in those contracts.

Distribution Tariffs to End Customers

The electricity tariff for regulated customers includes charges for capacity and energy for generation and transmission and for the VAD which considers a regulated return on investments, operating and maintenance fixed charges and a standard percent for energy distribution losses.

Distribution Tariff-Setting Process

The VAD is set every four years. Osinergmin classifies companies into groups, according to "typical distribution areas", based on economic factors that group companies with similar distribution costs due to population density, which determines equipment requirements in the network.

Actual return on investment for a distribution company depends on its performance relative to the standards chosen by the Osinergmin for a theoretical model company. The tariff system allows for a greater return for distribution companies that are more efficient than the model company. Tariff studies are performed by the Osinergmin and distribution companies. Preliminary tariffs are calculated as a weighted average of the results of the Osinergmin commissioned study and the companies' study, with the results of the Osinergmin's study bearing twice the weight of the companies' study. Preliminary tariffs are then tested to ensure that they provide an average actual annual internal rate of return between 8% and 16% on the replacement cost of electricity-related distribution assets.

The most recent process of distribution tariff setting has been in effect since November 2013 and will be in effect until October 2017.

Regulatory Charges

The regulatory charges applied to the energy sales in distribution activities are:

- The contribution to regulatory authorities (Osinergmin, MINEM), which represents 1% of total sales.
- The FOSE created to promote permanent access to the public electricity service for low-income residential customers. This fund established a cross subsidy system among customers that benefits customers with monthly consumption below 100 kWh through fixed and proportional discounts.
- The rural electrification charge is a contribution for promoting the efficient and sustainable electrification development in rural, isolated or frontier areas of the country. The contribution of the electricity customers is of 0.002 UIT (a tax unit) per MWh billed, with the exception of those which are not served by the SEIN.

Incentives and Penalties

Law 28,832 and DS 052-2007-EM ("General Regulations of the Supply Auctions") state that if auctions are called for with an anticipation of over three years, distributors will receive payment incentives which will be added to the generator price of the auctions, and then passed through to customers. This incentive cannot be higher than 3% of the tariffs applied.

The distribution concessionaire may lose its concession if it does not provide evidence of a guaranteed supply for the following 24 months, at a minimum, unless it has called for public auctions according to the current norm and has not received offers sufficient to comply with its total requirements for the established period.

Regulation in Transmission

Transmission activities are divided in two categories: "principal", which are for common use and allow the flow of energy through the national grid; and "secondary", which are those lines that connect a power plant with the national grid that connects principal transmission with the distribution network or that connect directly to certain end customers. Law 28,832 also defined "guaranteed transmission systems" and "supplementary transmission systems", applicable to projects commissioned after the enactment of that law. Guaranteed system lines are the result of a public bid and supplementary system lines are freely constructed and exploited as private projects. Principal and guaranteed system lines are accessible to all generators and allow electricity to be delivered to all customers. Transmission concessionaires receive an annual fixed income, as well as variable tariff revenues and connection tolls per kW. The secondary and supplementary system lines are accessible to all generators but are used to serve only certain customers who are responsible for making payments related to their use of the system.

Environmental Regulation

The environmental legal framework applicable to energy related activities in Peru is established in the Environmental Law (Law 28,611/2005) and in the Regulation for Environmental Protection regarding Electricity Activities (Supreme Decree 029-94-EM). MINEM dictates the specific environmental legal dispositions applicable to electricity activities, and Osinergmin is in charge of supervising certain aspects of their application and implementation. According to the Environmental Law, the Peruvian Ministry of Environment has the principal duties of (i) designing the general environmental policies to every productive activity; and (ii) establishing the main guidelines of the different government authorities for their specific environmental sector regulations. During 2010, most supervision functions regarding the application and implementation of the Environmental Law's dispositions were transferred from Osinergmin to the Peruvian Ministry of the Environment.

Renewable Energy Resources ("RER") for electricity generation are considered to be from the following sources: biomass, wind, solar, geothermal and tidal sources, as well as hydroelectric plants with an installed capacity lower than 20 MW.

In 2008, the authority issued regulations to promote the use of RER. The principal investment incentives established by these regulations are (i) an objective percentage of national electricity consumption, set every five years, to be covered by RER-based electricity generation, excluding hydroelectric plants (for the first five-year period, this percentage is 5%); (ii) through tenders of energy to be covered by RER, the investor awarded the tender is guaranteed a firm price for the energy injected into the system during the supply contract period of up to 20 years; and (iii) priority in the dispatch of load and access to transmission and distribution networks.

The second RER tender was held in August 2011 for the 1,300 GWh per year, which must be generated from non-hydroelectric sources. Out of 21 initiatives proposed, 473 GWh were awarded to three projects.

The third RER tender was held in December 2013, with the objective to provide 1,300 GWh per year of hydroelectric power and 320 GWh of biomass derived electricity. Nineteen small hydroelectric projects with individual capacities below 20 MW were awarded to supply 1,268 GWh.

The fourth RER tender is scheduled to take place in August 2015, with the objective to provide 1,300 GWh to both the interconnected and isolated systems. In addition, 450 GWh per year are required from small hydroelectric projects with a maximum capacity of 20 MW each.

In addition, other regulations established tax incentives, including (i) accelerated asset depreciation for income tax purposes, and (ii) the advanced recovery of the sales tax. In 2011, the permanent congressional commission approved Law 29,764, extending these tax benefits through 2020.

Law 29,968/2012 created the National Environmental Certification Service for Sustainable Investments ("SENACE" in its Spanish acronym), a specialized public organization with technical autonomy and a separate legal constitution, which reports to the Peruvian Ministry of the Environment. This organization is responsible for reviewing and approving detailed environmental impact studies of public, private or mixed capital investment projects, whether national or multi-regional, that involve activities, construction and other commercial and service activities whose characteristics, importance and/or location can result in significant environmental impacts, with the exception of those expressly excluded by Supreme Decree with the consenting vote of the Council of Ministers.

SENACE seeks to implement a single system of environmental administrative procedures to guarantee sustainable investments through the implementation of a sole window of environmental certification.

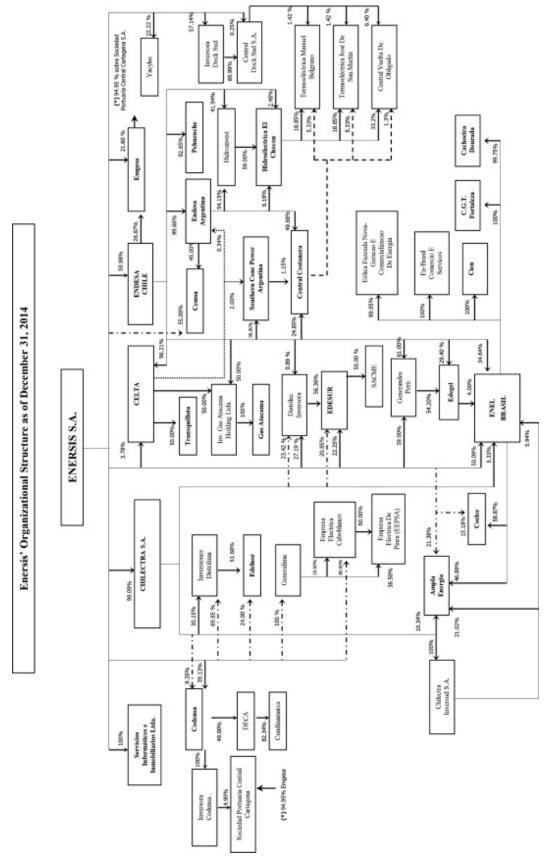

Raw Materials

For information regarding our raw materials, please see "Item 11. Quantitative and Qualitative Disclosures About Market Risk — Commodity Price Risk."

C. Organizational Structure.

Principal Subsidiaries and Affiliates

We are part of an electricity group controlled by the Italian company, Enel, our parent company which beneficially owns, directly and indirectly, 60.6% of our shares through wholly-owned Spanish subsidiaries. Enel publicly trades on the Milan Stock Exchange. It is headquartered in Italy and is primarily engaged in the energy sector, with a presence in 32 countries across four continents, mainly in Europe and Latin America, and generating power from power plants with over 95 GW of net installed capacity. Enel provides service to more than 61 million customers through its electricity and gas businesses through distribution networks of 1.9 million kilometers.

The companies listed in the following table were consolidated by us as of December 31, 2014. In the case of subsidiaries, our economic interest is calculated by multiplying our percentage economic interest in a directly held subsidiary by the percentage economic interest of any entity in the chain of ownership of such ultimate subsidiary.

Principal Subsidiaries and Country of Operations	% Economic Ownership of Main Subsidiary by Enersis (in %)	Consolidated Assets of Each Main Subsidiary (in billions of Ch\$)	Operating Income of Each Main Subsidiary
Electricity Generation			
Endesa Chile (Chile) ⁽¹⁾	60.0	7,237.7	875.3
Fortaleza (Brazil)	84.4	221.7	37.0
Cachoeira Dourada (Brazil)	84.2	147.7	71.9
Dock Sud (Argentina) ⁽²⁾	57.1	99.8	9.4
EEPSA (Peru)	96.5	121.6	17.6
Electricity Transmission			
CIEN (Brazil)	84.4	237.5	42.1
Electricity Distribution			
Chilectra (Chile)	99.1	1,541.2	152.9
Ampla (Brazil)	92.0	1,425.6	183.8
Edesur (Argentina)	71.6	814.2	(51.2)
Edelnor (Peru)	75.5	715.6	91.0
Coelce (Brazil) ⁽³⁾	64.9	937.4	117.4
Codensa (Colombia)	48.4	1,183.2	262.0
Other non-electricity businesses			
SIEI (Chile) ⁽⁴⁾	100	59.8	5.3

⁽¹⁾ Endesa Chile consolidates all generation facilities in Chile, Argentina, Colombia and Peru, with the exception of Central Dock Sud (Argentina) and EEPSA (Peru).

- (2) Figures correspond to Inversora Dock Sud S.A., an investment vehicle through which we hold our economic interest in Dock Sud.
- (3) As a consequence of a voluntary tender offer carried out between February and May 2014, our shareholding increased from 49.2% to 64.9%.
- (4) In December 2014, Inmobiliaria Manso de Velasco Ltda. merged into ICT Servicios Informáticos Ltda. This resulting company was renamed Servicios Informáticos e Inmobiliarios Ltda. (SIEI).

Generation and Transmission Segment

Celta (Chile)

Celta was formed in 1995 in order to build and operate two thermoelectric plants in the SING: a coal-fired plant with an installed capacity of 158 MW, and a gas/fuel oil power plant with 24 MW of installed capacity. On November 1, 2013, Endesa Eco (which had previously merged with San Isidro and Pangue) was merged into Celta. This merger was completed under the organizational simplification announced by Endesa Chile on February 29, 2012. Endesa Chile holds a 96.2% equity interest and we hold a 61.5% economic interest in Celta.

Endesa Chile (Chile)

Endesa Chile is a Chilean publicly held electricity generation company. On a stand-alone basis, excluding direct Chilean subsidiaries (which are described below), Endesa Chile has a total installed capacity of 6,351 MW as of December 31, 2014, with 17 generation facilities. Of the total installed capacity, 62% is from hydroelectric power plants and includes, among others, Ralco with 690 MW, El Toro with 450 MW, Rapel with 377 MW, and Antuco with 320 MW. Nearly 67% of its thermoelectric facilities are gas/fuel oil power plants, and the remaining are coal-fired steam power plants. Our economic interest in Endesa Chile is 60.0%.

GasAtacama (Chile)

GasAtacama is a generation company located in the northern region of Chile. It consists of a four-unit combined-cycle power plant of with a capacity of 780 MW and a gas pipeline, which allows the import of gas from Argentina. Since March 31, 2014, and after completing the purchase of a 50% ownership interest in GasAtacama Holding, Endesa Chile beneficially owns 98.1% of GasAtacama's shares. Since May 1, 2014, Endesa Chile has fully consolidated GasAtacama Holding and GasAtacama in its consolidated financial statements. We beneficially own a 60.7% economic interest in GasAtacama.

Pehuenche (Chile)

Pehuenche, a generation company connected to the SIC, owns three hydroelectric facilities located in the hydrological basin of the Maule River, south of Santiago, with a total installed capacity of 699 MW. The 570 MW Pehuenche plant began operations in 1991, the 89 MW Curillinque plant began operations in 1993, and the 40 MW Loma Alta plant began operations in 1997. Endesa Chile holds 92.7% of Pehuenche and our economic interest in Pehuenche is 55.6%.

Cemsa (Argentina)

Cemsa's principal activities are the trading of electricity and fuel oil. Cemsa has executed several agreements with Argentine electricity power stations to support its supply contracts. These are as follows: Costanera, Dock Sud, Centrales Térmicas del Noroeste S.A., and El Chocón. Endesa Chile indirectly holds 45.0% of Cemsa and our economic interest in Cemsa is 82.0%.

Dock Sud (Argentina)

Dock Sud owns and operates a 870 MW generation facility consisting of two plants. Dock Sud's power station has four gas turbines and one steam turbine. Two of the gas turbines and the steam turbine comprise a combined-cycle power plant. In 2014, Dock Sud generated 4,786 GWh. Our economic interest in Dock Sud is 40.2% and in Inversora Dock Sud S.A. is 57.1%.

Costanera (Argentina)

Costanera is an Argentine publicly held electricity generation company, with 2,324 MW of total installed capacity in Buenos Aires. Costanera consists of six steam turbines with an aggregate capacity of 1,138 MW which burn oil and gas, and two natural gas combined-cycle facilities with a total capacity of 1,186 MW. Costanera was acquired from the Argentine government after the privatization of Servicios Eléctricos del Gran Buenos Aires S.A. Endesa Chile owns 75.7% of Costanera's shares, and we own a 45.4% economic interest.

El Chocón (Argentina)

El Chocón is an Argentine electricity generation company. It has two hydroelectric power stations with an aggregate installed capacity of 1,328 MW located between Neuquén and Río Negro provinces, in the Comahue Basin in southern Argentina. A 30-year concession, which expires in 2023, was granted by the Argentine government to our subsidiary, Hidroinvest S.A., which bought 59.0% of El Chocón's shares in July 1993 during the privatization process. Endesa Chile operates El Chocón for a fee pursuant to an operating agreement with a term equal to the duration of the concession. Endesa Chile beneficially holds 65.4% of El Chocón, and our economic interest is 39.2%.

Cachoeira Dourada (Brazil)

Cachoeira Dourada owns and operates a run-of-the-river hydroelectric plant using the flows from the Paranaiba River, located in the State of Goias, consisting of ten generating units totaling 665 MW of installed capacity. Cachoeira Dourada began its operations in 1997, and as of December 31, 2014, had a concession that expires in 2027. Enel Brasil has a 99.8% ownership interest in Cachoeira Dourada and our economic interest is 84.2%.

CIEN (Brazil)

CIEN is a Brazilian transmission and trading company wholly-owned by Enel Brasil. It transmits electricity through two owned transmission lines located between Argentina and Brazil, covering a distance of 500 kilometers, with a total interconnection capacity of 2,100 MW. As of December 31, 2014, CIEN-Line 1 had a concession that expires in six years, and CIEN-Line 2 had a concession that expires in eight years. CIEN consolidates CTM and TESA, which operate the Argentine side of the interconnection line with Brazil. Our economic interest in CIEN is 84.4%.

Enel Brasil (Brazil)

In 2005, Enel Brasil was formed in order to manage all Brazilian generation, transmission and distribution assets that Enel Latinoamérica owns in conjunction with Enersis, Endesa Chile and Chilectra. Enel Brasil consolidates operations of two generation companies (Cachoeira Dourada and Fortaleza), the transmission company CIEN, as well as two distribution companies (Ampla and Coelce). Endesa Chile owns 37.1% of Enel Brasil's shares, and we beneficially own an 84.4% economic interest.

Fortaleza (Brazil)

Fortaleza owns and operates a 322 MW natural gas combined-cycle power plant, with a capacity to generate one-third of the electricity requirements of the State of Ceará, a state with a population of 8.2 million people. As of December 31, 2014, Fortaleza had a concession that expires in 17 years. Fortaleza is wholly-owned by Enel Brasil, and we hold an 84.4% economic interest.

Emgesa (Colombia)

Emgesa has a total installed generating capacity of 3,059 MW, of which 85% is from hydroelectric power plants and 15% is from thermoelectric power plants. Empresa de Energía de Bogotá S.A. directly holds a 51.5% equity interest in Emgesa. Endesa Chile beneficially owns 26.9% of Emgesa's shares and has 31.3% of the voting rights. However, due to a transfer of 25.1% of the voting rights in Emgesa from us, as holders of a 21.6% direct ownership in Emgesa, to Endesa Chile and a shareholders' agreement. Endesa Chile holds a majority of the voting rights and is allowed to appoint the majority of the Board members and, therefore, controls Emgesa. We beneficially own 37.7% of Emgesa. For more information, see "Item 5. Operating and Financial Review and Prospects — A. Operating Results. — 1. Discussion of Main Factors Affecting Operating Results and Financial Condition of the Company."

Edegel (Peru)

Edegel, an electricity generation company, was acquired by Endesa Chile in 1995. It consists of seven hydroelectric plants and two thermal plants, with a combined installed capacity of 1,652 MW. In October 2009, Endesa Chile purchased an additional 29.4% stake in Edegel from Generalima, S.A.C., one of our subsidiaries, and as a result of this transaction, increased its ownership interest from 33.1% to 62.5%. In September 2014, we acquired a 39.0% stake that Inkia Americas Holdings Limited held in Generandes Perú S.A., a company that holds 54.2% stake of Edegel. With this transaction, we increased our economic interest in Edegel from 37.5% to 58.6%.

Edegel holds 80% of the shares of Chinango S.A.C. and Peruana de Energía S.A.A. (an unaffiliated entity) owns the remaining 20% of the shares.

EEPSA (Peru)

EEPSA has 297 MW of generation capacity, consisting of two thermal plants, Malacas and Malacas II, both of which are located in the province of Talara-Piura, which operate using locally produced natural gas. We beneficially own 96.5% of EEPSA.

Distribution Segment

Chilectra (Chile)

Chilectra is one of the largest electricity distribution companies in Chile as measured by the number of regulated customers, distribution assets and energy sales. Chilectra operates in a concession area of 2,105 square kilometers in the Santiago metropolitan area, serving approximately 1.7 million customers. Our shareholding is 99.1%.

Edesur (Argentina)

Edesur is one of the largest electricity distribution companies in Argentina in terms of energy purchases. Edesur operates in a concession area of 3,309 square kilometers in the south-central part of the Buenos Aires metropolitan area, serving approximately 2.5 million customers under a concession that expires in 73 years. Our economic interest in Edesur is 71.6%.

Ampla (Brazil)

Ampla is the second largest electricity distribution company in the State of Rio de Janeiro, Brazil, in terms of number of customers and annual energy sales. Ampla is mainly engaged in the distribution of electricity to 66 municipalities located in the State of Rio de Janeiro, and serves 2.9 million customers in a concession area of 32,615 square kilometers. As of December 31, 2014, Ampla had a concession that expires in 12 years. We have a 92.0% economic interest in Ampla.

Coelce (Brazil)

Coelce is the sole electricity distributor of the State of Ceará, located in the northeastern part of Brazil, and serves over 3.6 million customers within a concession area of 148,825 square kilometers. As of December 31, 2014, Coelce had a concession that expires in 13 years. Prior to 2014, our economic interest in Coelce was of 49.2%, and as a result of the voluntary tender offer carried out between February and May 2014, our shareholding increased to 64.9%.

Codensa (Colombia)

Codensa is a Colombian electricity distribution company that serves a concession area of 14,456 square kilometers in Bogotá and other 96 municipalities of the provinces of Cundinamarca, Tolima and Boyacá, serving approximately 2.8 million customers. Our economic interest in Codensa, held directly and indirectly through Chilectra, is 48.4%, which represents 57.2% of the voting rights in Codensa As a result, we hold a majority of the voting rights and, pursuant to a shareholders' agreement, appoint the majority of its Board members, and therefore, we have control over Codensa. For more information regarding the control and consolidation of Codensa, see "Item 5. Operating and Financial Review and Prospects — A. Operating Results. — 1. Discussion of Main Factors Affecting Operating Results and Financial Condition of the Company."

Edelnor (Peru)

Edelnor, a Peruvian electricity distribution company, operates in a concession area of 1,517 square kilometers. It has an exclusive concession to distribute electricity in the northern part of the Lima metropolitan area, as well as some provinces in the Lima region, including Huaral, Huaura, Barranca and Oyón, and the adjacent province of Callao. As of December 31, 2014, Edelnor distributed electricity to approximately 1.3 million customers. We hold a 75.5% economic interest in Edelnor.

Selected Related and Jointly-Controlled Companies

HidroAysén (Chile)

HidroAysén was incorporated in March 2007 to develop and exploit a hydroelectric project in the Aysén Region, in southern of Chile. Endesa Chile owns 51% of HidroAysén and Colbún owns the remaining 49%. Our economic interest in HidroAysén is 30.6%. Endesa Chile recorded an impairment loss of Ch\$ 69,067 million attributed to the fourth quarter of 2014, related to the uncertainty of recovering the investment made in HidroAysén.

Transquillota (Chile)

Transquillota was formed by San Isidro and Colbún for the joint development of a 220 kV transmission line to dispatch the energy produced and to connect to both the San Isidro (which is now merged with Celta, one of Endesa Chile's subsidiaries) and Nehuenco (a subsidiary of Colbún) plants to the SIC. The 220 kV transmission line is 8 kilometers long. The property is equally divided among Endesa Chile and Nehuenco. Endesa Chile's economic interest is 48.1% and our economic interest is 30.7%.

Yacvlec (Argentina)

Yacylec is an Argentine electricity transmission company. As of December 31, 2014, Yacylec had a concession that expires in 74 years. The Yacylec transmission system consists of:

- Three 500 kV transmission lines, 4 kilometers each in length, from the Hidroeléctrica Yaciretá power station to the Rincón de Santa María transformer station.
- The 500 kV Rincón de Santa María transformer station, located in the province of Corrientes.
- A 500 kV transmission line (296 kilometers long) from the Rincón de Santa María transformer station to the Resistencia transformer station, and an expansion of the Resistencia transformer station, located in the province of Chaco.
- · A communications system.

Our economic interest in Yacylec is 22.2%.

Non-Electricity Businesses

SIEI (Chile)

SIEI is a company that provides consulting, management, administration, and contract operations related to information systems, technological information, telecommunications, and control systems in South America, as well as developing real estate projects in Chile. SIEI was formed in December, 2014, as a result of the merger of ICT Servicios Informáticos Ltda. with Inmobiliaria Manso de Velasco Ltda.

D. Property, Plant and Equipment.

Our property, plant and equipment are concentrated primarily on electricity generation, distribution and transmission assets in the five countries in which we operate.

Property, Plant and Equipment of Generating Companies

We conduct our generation and transmission businesses directly and through our subsidiaries, Endesa Chile and Enel Brasil. In Chile, Endesa Chile owns 28 generation power plants. Endesa Chile also consolidates revenues from other non wholly-owned generation companies in Argentina, Colombia and Peru, which in turn own 26 additional generation power plants. We conduct our Brazilian operations through Enel Brasil and consolidate revenues from two other generation power plants. In addition, we directly consolidate revenues from two other non wholly-owned generation companies, which own two generation power plants, one in Argentina and one in Peru. As a result, we have an aggregate of 59 power plants in South America. Through Enel Brasil, we also own and operate a transmission system consisting of two 500 kilometer 2,100 MW transmission lines that link Rincón de Santa María in Argentina with Itá in the State of Santa Catarina in Brazil.

A substantial portion of our generating subsidiaries' cash flow and net income is derived from the sale of electricity produced by our electricity generation facilities. Significant damage to one or more of our main electricity generation facilities or interruption in the production of electricity, whether as a result of an earthquake, flood, volcanic activity or any other such cause, could have a material adverse effect on our operations. Our generating subsidiaries insure all electricity generation facilities against damage due to earthquakes, fires, floods, other acts of god (but not for prolonged droughts, which are *force majeure* risks, and are not covered by insurance companies) and from damage due to third-party actions, based on the appraised value of the facilities as determined from time to time by an independent appraiser. Based on geological, hydrological and engineering studies, management believes that the risk of an event with a material adverse effect is remote. Claims under our generating subsidiaries' insurance policies are subject to customary deductibles and other conditions. We also maintain business interruption insurance providing coverage for the failure of any of our facilities for a period of up to 24 months, including the deductible period.

The insurance coverage taken for Chilean and non-Chilean property are approved by each company's management, taking into account the quality of the insurance companies and the needs, conditions and risk evaluations of each generating facility, and is based on general corporate guidelines.

All insurance policies are purchased from reputable international insurers. We continuously monitor and meet with the insurance companies in order to obtain what we believe is the most commercially reasonable insurance coverage.

The following table identifies the power plants that we own, at the end of each year, by country and their basic characteristics:

				stalled Capaci	
Country/Company	Power Plant Name	Power Plant Type ⁽¹⁾	2014	2013	2012

^{(1) &}quot;Reservoir" and "pass-through" refer to hydroelectric plants that use the force of a dam or a river, respectively, to move the turbines which generate electricity. "Steam" refers to thermal power plants fueled with natural gas, coal, diesel or fuel oil to produce steam that moves the turbines. "Gas Turbine" ("GT") or "Open Cycle" refer to thermal power that uses either diesel or natural gas to produce gas that moves the turbines. "Combined Cycle" refers to a thermal power plant fueled with natural gas, diesel oil, or fuel oil to generate gas that first moves a turbine and then recovers the gas from that process to generate steam to move a second turbine.

⁽²⁾ On October 28, 2012, Bocamina II (350 MW) commenced commercial operation.

⁽³⁾ San Isidro. merged into Endesa Eco. on September 1, 2013, and the latter remained the surviving company. Subsequently, Endesa Eco merged into Celta on November 1, 2013, and Celta. was the surviving company.

⁽⁴⁾ GasAtacama was accounted for using the equity method and its installed capacity was not included in 2012, 2013 and a portion of 2014. Since May 1, 2014, GasAtacama has been fully consolidated following Endesa Chile's purchase of an additional 50% interest in GasAtacama Holding.

Installed Capacity

As of December 31, 2014, we received the ISO 14,001 certification for 97.9% of our installed capacity in South America, which included all of our generation facilities that produced 100% of the total annual generation in accordance with the this standard. The Bocamina II generating unit is the only not certified facility because it was out of service during 2014.

⁽¹⁾ Minor plants have an aggregate capacity of 57 MW. As of December 31, 2014 Emgesa owned and operated three minor plants: Charquito (19 MW), El Limonar (18 MW) and Tequendama (19.5 MW). In March 2014, the San Antonio (19.5 MW) plant was decommissioned. In October 2013, the La Tinta (19.5 MW) and La Junca (19.5 MW) plants were decommissioned.

⁽²⁾ In November 2013, the Dario Valencia power plant began commercial operations with 50 MW of installed capacity. During 2014 unit 1 (January) and unit 5 (April) also began commercial operations adding 100 MW of capacity. This power plant is part of the Salaco Hydroelectric project (see "— Investment Projects Completed during 2014" below), together with the El Limonar, El Salto II and Laguneta power plants.

⁽³⁾ In June 2014, the El Salto II (35 MW) power plant began commercial operations.

⁽⁴⁾ In December 2014, the Laguneta (18 MW) power plant began commercial operations.

⁽⁵⁾ The Matucana power plant increased its installed capacity by 4 MW in June 2013 and by 4 MW in July 2014.

⁽⁶⁾ The installed capacity of this power plant in 2014 was the result of tests made by COES.

⁽⁷⁾ In October 2013, unit TG 7 (121 MW) of the Santa Rosa power plant was decommissioned and in December 2014 it began commercial operations again. During 2014, unit TG 5 (January) and unit TG 8 (December) decreased Santa Rosa's installed capacity by 13 MW.

⁽⁸⁾ As a result of the 2013 capital increase, Enersis began consolidating EEPSA as of April 2013. The installed capacity of this generation power plant was reduced by 0.79 MW in August 2013, according to test performed by the COES. In August 2014, unit TG1 (11.7 MW) of the Malacas power plant was decommissioned.

Property, Plant and Equipment of Transmission and Distribution Companies

We also have significant interests or investments in electricity distribution. The description for each distribution company is included in this "Item 4. Information on the Company." The table below describes our main equipment used for our distribution business, such as transmission lines, substations, distribution networks and transformers.

We are insured against damage to substations, transformers that are within the substations, the distribution network that is less one kilometer from the substations and administrative buildings. Risks covered include losses caused by fires, explosions, earthquakes, floods, lightning, damage to machinery and other such events. Insurance policies include liability clauses, which protect our companies from complaints made by third parties.

Transmission lines and the equipment attached to them do not qualify as insurable assets for property damage, although they have insurance policies including civil liability clauses for damages against third parties caused by these transmission installations. These criteria apply in the case of the Argentina-Brazil interconnection line, our main transmission asset, for which there is insurance coverage for damage to the assets and civil liability for the Garabí conversion station, the Argentina/Brazil connection substations and up to one kilometer of lines from the substations. Only third-party liability coverage is applicable for the rest of the transmission lines.

TABLE OF DISTRIBUTION FACILITIES

General Characteristics

				Transmission Lines ⁽¹⁾				
	Location	Concession Area (in km²)	2014	2013 (in kilometers)	2012			
Chilectra	Chile	2,105	355	355	355			
Edesur	Argentina	3,309	1,115	1,115	1,146			
Ampla	Brazil	32,615	2,351	2,363	2,363			
Coelce	Brazil	148,825	5,069	4,875	4,628			
Codensa ⁽²⁾	Colombia	14,456	1,247	1,247	1,247			
Edelnor	Peru	1,517	534	501	471			
Total ⁽³⁾		202,833	10,671	10,456	10,210			

⁽¹⁾ The transmission lines consist of circuits with voltages in the 27-220 kV range.

⁽²⁾ The concession area figure differs from previous disclosures as it was reviewed in 2014 and updated accordingly following an update of the territorial area of municipalities, conducted by National Administrative Department of Statistics ("DANE" in its Spanish acronym).

⁽³⁾ Figures do not include 49% of our jointly-controlled company, EEC, which was previously reported in 2012, due to its accounting under the equity method since January 1, 2013.

Power and Interconnection Substations and Transformers⁽¹⁾

		2014			2013			2012	
	Number of Substations	Number of Transformers	Capacity (MVA)	Number of Substations	Number of Transformers	Capacity (MVA)	Number of Substations	Number of Transformers	Capacity (MVA)

Total ⁽²⁾	391,471	33,914	385,260	32,696	379,592	31,548	

- (1) Voltage of these transformers is in the range of 34.5 kV (medium voltage) and 110 V (low voltage).
- (2) Figures do not include 49% of our jointly-controlled company, EEC, which was previously reported in 2012, due to its accounting under the equity method since January 1, 2013.

Project Investments

The total investment of each project described below was translated into Chilean pesos at the exchange rate of Ch\$ 606.75 per U.S. dollar, the U.S. dollar Observed Exchange Rate for December 31, 2014. Budgeted amounts include connecting lines that could eventually be owned by third parties and paid as tolls, unless otherwise indicated.

Investment Projects Completed during 2014

Colombia. Salaco Hydroelectric Project

The Salaco optimization project consisted of adding 145 MW of capacity to the hydro cascade of the Bogotá River, through major maintenance and modernization of six generating units that had been out of service. The units refurbished are located in three generating stations: Salto II (increasing capacity from 19.4 MW to 35 MW), Laguneta (increasing capacity from 18 MW to 36 MW) and Darío Valencia (increasing capacity from 38.8 MW to 150 MW), all of which were previously being dispatched as small hydro plants on a marginal basis. The Laguneta power plant was reconfigured for commercial convenience into two minor plants: Laguneta and Limonar, allowing us to have a continuous generation and to increase our operating income. The increase in capacity generated an additional 323.8 GWh during 2014 and is expected to generate approximately 482 GWh per year.

Renovation work began in February 2013, and is substantially completed, although there is some work still pending related to auxiliary and ancillary equipment and the integration of the SCADA system, a system to control and remotely operate the power plant. On November 6, 2013, Darío Valencia's HPP unit 2 (50 MW) resumed commercial operation and during 2014 the remainder of the units also began commercial operation (see notes (3) through (5) of the table showing the installed capacity in Colombia).

This project is being financed with internally generated funds. The total estimated investment is Ch\$ 26,515 million of which Ch\$ 22,771 million was accrued as of December 31, 2014.

Projects under Construction

Colombia. El Quimbo Hydroelectric Project

The El Quimbo hydroelectric project is located in the province of Huila, southeast of Bogotá, on the Magdalena River, upstream of the Betania power plant. Its installed capacity will be 400 MW through two generation units. The estimated average generation is 2,216 GWh per year. The construction began in December 2010 and is expected to be completed by September 2015.

During 2014, two significant landslides (March 12th and June 14th) occurred in the area of the auxiliary dam, downstream of the structure. As a consequence, we needed to reschedule activities and the initial filling of the reservoir is anticipated to take place in June 2015. As a result, units 1 and 2 are estimated to begin operations on August 30 and September 30, 2015, respectively.

The main advances in construction in 2014 were:

- In March 2014, we finished all the concrete work and machine housing of unit 1 and unit 2.
- In May 2014, we finished phase I of civil works, including the concrete face of the dam.
- In October 2014, we completed of the unit 1 rotor assembly in the penstock (including alignment and leveling).
- In November 2014, we finished the testing of the unit 1 transformer in its final location.

This project is being financed primarily with external sources, through local and international bonds. The estimated total investment is Ch\$ 723,308 million, of which Ch\$ 473,828 million was accrued as of December 31, 2014.

Chile. Los Cóndores Hydroelectric Project

The Los Cóndores project will be located in the Maule region. It consists of a 150 MW run-of-the river hydroelectric power plant, which will use water from the Maule Lake reservoir through a 12 kilometer penstock. The power plant will be connected to the SIC at the Ancoa substation (220 kV) through an 87 kilometer transmission line.

The feasibility study for the project has been completed. It considers the use of a Tunnel Boring Machine (TBM) for the construction of the tunnel, which is a method that does not use explosives, therefore being more efficient than the conventional method of drilling and blasting. The TBM method has higher safety standards and a lower environmental impact for the construction of the tunnel connecting the project to the Maule Lake. The environmental permit for this generation power plant was obtained in 2011. Basic engineering was completed at the end of 2011. The transmission line project received its environmental qualification resolution in May 2012, and in May 2013, the transmission project obtained its final approval. In November 2013, Endesa Chile obtained a hydraulic work permit authorizing the river course change for the construction of the plant.

On March 27, 2014, our Board of Directors authorized the project. During 2014, we awarded the main contracts of the power plant, in order to start the construction; civil works were awarded to the Ferrovial Agroman Consortium, the electromechanical equipment to Voith and the transmission line to Abengoa, all unrelated companies.

Construction is expected to be completed in 2018. This project is being financed primarily with internally generated funds. The estimated total investment is Ch\$ 393,995 million, of which Ch\$ 54,471 million was accrued as of December 31, 2014.

Projects Under Development

We continuously analyze different growth opportunities in the countries in which we participate. Currently, we are studying and assessing our project portfolio, focusing on constructing smaller, less invasive power plants. These plants are constructed faster, allow greater flexibility to activate or deactivate according to system needs, and are generally more acceptable to residents. Additionally, an additional focus will be placed on the development of renewable technologies. Thus, the expected start-up for each project is continuously assessed and will be defined based on the commercial opportunities and our financing capacity to fund these projects. The most relevant projects in the pipeline are as follows:

Generation Business

Chile. Neltume Hydroelectric Project

The Neltume project is located in Los Ríos region, on the upper part of the Valdivia River basin. The Neltume project consists of a 490 MW installed capacity run-of-the-river hydro power plant that will take advantage of the existing energy potential between the Pirehueico and Neltume Lakes. It will be connected to the SIC through a 42 kilometer 220 kV transmission line from Neltume to Pullinque.

The Neltume power generation project has been under the environmental assessment process since December 2010, and is currently entering the fourth round of questions and answers. During 2011, basic engineering studies began and supplementary studies for environmental process were carried out. During 2012, basic engineering studies were completed.

During 2013, we prepared and submitted supplemental information Addenda Number 4 to the environmental authority, both for the plant and for the transmission line, in response to a fourth consolidated observations report (ICSARA Number 4) issued by the Environmental Evaluation Service ("SEA"). During the second half of 2013, the SEA initiated the indigenous survey process to the local people in the area, to ascertain their position about the project and to comply with Convention Number 169, "Indigenous and Tribal Peoples Convention" of the International Labor Organization ("ILO"). There is no legal deadline to complete the indigenous inquiry and the environmental assessment process is suspended until it is concluded. However, we expect that both the Indigenous Inquiry and the environmental assessment will conclude during 2015.

Currently, we expect construction to start during 2018 and completion in 2022. This project is being financed primarily with internally generated funds. The estimated total investment is Ch\$ 762,547 million, of which Ch\$ 30,291 million was accrued as of December 31, 2014.

Chile. HidroAysén Hydroelectric Project

The HidroAysén hydroelectric project, 51%-owned by Endesa Chile, consisted of five hydroelectric power plants, with an aggregate installed capacity of 2,750 MW, two of which were planned in the Baker River (660 MW and 360 MW) and the remaining three in the Pascua River (770 MW, 500 MW and 460 MW). The project was expected to have an annual average generation capacity of 18,430 GWh, or 36% of the consumption of the SIC during 2013, and had the potential of becoming the most important hydroelectric initiative in Chile. The total surface of the dam, considering the five power plants, was planned for 5,910 hectares, and would have been one of the most efficient worldwide in terms of power capacity per surface flooded.

As is established by law, the HidroAysén project entered its Environmental Impact Assessment Study ("EIA") for processing in August 2008, and after three years of exhaustive evaluation, obtained a favorable EIA with some environmental observations on May 9, 2011. During 2012, HidroAysén ended a long judicial process started by opponents to the project, who attempted to stop the initiative. In April 2012, the Santiago Supreme Court ruled in favor of HidroAysén, rejecting the claims filed by environmental organizations, which had been heard by the Court of Appeals of Coyhaique and then the Court of Appeals of Puerto Montt. The highest court of law in the country validated the environmental approval of HidroAysén.

Opponents to the project and HidroAysén filed appeals with the Chilean Council of Ministers regarding certain requirements established in the approved environmental qualification resolution ("RCA" in its Spanish acronym). Although the Chilean Council should have taken 60 business days to resolve the matters, it took over two years, and it requested additional studies in order to resolve the pending claims. In January 2014, during President Piñera's government, the majority of these claims were resolved by the Chilean Council of Ministers. In March 2014, President Michelle Bachelet took office, and during that month a new Chilean Council of Ministers was convened, and it repealed the decisions taken in January 2014. The new Chilean Council of Ministers stated it would study the issue again and resolve all claims within the 60 business day timeframe established by law. In June 2014 the new Council of Ministers unanimously voted to revoke the RCA.

In August 2014, HidroAysén appealed to the Santiago and Valdivia Environmental Courts of Law, and later requested the processing of the legal cases be unified in a single court of law. As of the date of this Report, there is still no clarity regarding the time periods to resolve, both the definition of competence of both courts of law, as well as the definite resolution of the appeal.

On January 29, 2015, Endesa Chile determined not to proceed with this project as had been defined until recently and recorded an impairment loss of Ch\$ 69,067 million attributed to the fourth quarter of 2014, related to the uncertainty of recovering the investment made in HidroAysén, mainly as a consequence of its long judicial process in order to obtain environmental approvals. For more details about the impairment charge, please refer to "Item 5 Operating and Financial Review and Prospects — A. Operating Results. — 2. Results of Operations for the Years ended December 31, 2014 and December 31, 2013. — Results of Associates."

Chile. Punta Alcalde Thermoelectric Power Plant

The project consisted of the construction of two 370 MW coal-fired thermoelectric power plants located in the Atacama region, totaling 740 MW of installed capacity. The plant would have been connected to the SIC at the Maitencillo substation (220 kV) through a 44 kilometer transmission line.

In 2009, we started with the required assessment process in front of the environmental authorities, who rejected the project. In January 2014, the Supreme Court ruled in favor of the project, but imposed several conditions in the RCA, including steps to improve air quality in the nearby town of Huasco, as well as certain additional environmental evaluations.

In light of the changes requested by the Court, we concluded that major modifications to the approved RCA were needed in order to make the project economically and technologically more sustainable. On January 29, 2015, we halted development of the power plant and the related transmission project. We recorded a Ch\$ 12,582 million impairment loss related to the Punta Alcalde project in the fourth quarter of 2014. For more details about the impairment charge, please refer to "Item 5 Operating and Financial Review and Prospects — A. Operating Results. — 2. Results of Operations for the Years ended December 31, 2014 and December 31, 2013. — Operating Costs — Selling and Administrative Costs."

Chile. Taltal Combined-Cycle

The project consists of the construction of a steam turbine for converting the existing Taltal gas-fired open cycle plant to a combined-cycle plant by adding a turbine in the vapor phase, which would use the steam generated by the gas turbines' heat emissions to produce energy. Taltal power plant is located in the Antofagasta region. Currently, the existing Taltal power plant has two gas turbines of 123 MW each. The extra power to be added by the steam turbine would be approximately 120 MW and therefore, the Taltal power plant would achieve a total capacity of 370 MW and an efficiency increase. The energy produced will be supplied to the SIC through the existing 220 kV double circuit Diego de Almagro – Paposo transmission line.

In December 2013, an optimized Environmental Impact Statement ("DIA" in its Spanish acronym) was submitted for approval to the SEA. The main optimization relates to a change in the cooling system, which was originally designed as a wet system (using sea water) and is being modified to a dry cooling system. During 2014, we progressed on drafting Addendum No. 1 of the DIA responding to the first round of observations formulated by the SEA. The Addendum was submitted to the SEA during the first quarter 2015. Currently, we are studying and assessing our project portfolio; therefore, the project does not have any defined dates for the beginning of construction and commercial start-up. This project is being financed primarily with internally generated funds. The estimated total investment is Ch\$ 179,439 million. The amount invested as of December 31, 2014 was Ch\$ 2,596 million.

Peru. Curibamba Hydroelectric Project

Curibamba consists of a 188 MW run-of-the-river power plant and a 134 kilometer transmission line that will connect it to SEIN at Pachachaca substation (220 kV). This power plant will be located 385 kilometers northeast of Lima, upstream of Chimay hydroelectric power plant (province of Junín), and will use the waters of the Comas and Uchubamba Rivers through an 8.1 kilometer penstock.

During 2013, the EIA study for the first section of the transmission line (Curibamba – Oroya Nueva, 112 kilometers) was approved, while the EIA study for the second section (Oroya Nueva – Pachachaca, 22 kilometers) is currently in its final stage of assessment. In addition, archaeological permits were successfully obtained for the transmission line and the electrical connection study that was submitted in 2012 obtained COES approval. All documents required to obtain the electricity concession were presented to the authority in December 2013. In January 2015, the Peruvian Ministry of Energy and Mining approved the 2015 - 2024 Binding Transmission Plan, with this the connection of the power plant is being reviewed as it would enable an interconnection to a closer substation located only 40 km from the project.

During 2014, we continued with the bidding process for the project's main contracts (civil works, equipment supply and electrical interconnection) and we started with studies required for obtaining prior permits to the project construction.

Currently, the project has a definite generation concession for the power plant, the approved Environmental Impact Study, as well as certificates stating the Non-Existence of Archaeological Remains, both for the power plant as well as for the transmission line.

We anticipate participations in hydroelectric bids that the Peruvian government expects to hold in 2015. The construction is expected to start during the first quarter of 2015 with completion scheduled for 2019. This project is being financed primarily with internally generated funds, with an estimated total investment of Ch\$ 436,281 million, of which Ch\$ 13,887 million has been accrued as of December 31, 2014.

Distribution Business

Argentina

In 2014, Edesur invested Ch\$ 131 billion in projects aimed at improving the quality of service and protecting public safety, including the Pérez Galdós station reconversion project and the extension of the substations Almirante Brown, Calzada, Echeverría, Bosques, Transradio, Caballito, Barracas and Pompeya. We expect these works carried out in 2014 will be fully operational in 2015. Also, Edesur also invested in the medium voltage network telecontrol project, which seeks to reduce supply interruption times for users. During 2014, Edesur incorporated 57 new transformer centers; these are high-tech monitors that communicate with the control center.

Additionally, Edesur started-up the "2014 Winter Plan" and "2014-2015 Summer Plan," which contains a series of preventive actions focused on counteracting the increase in demand due to extreme temperature periods, along with the general contingencies plan, maintenance of installations and network plan, media information plan, availability of human resources, professional meteorologists' services and availability of mobile energy generating units located in critical points.

As for innovation and energy efficiency matters, Edesur presented the Enel technology at recharging stations for electric vehicles in various events, targeted at incentivizing projects aligned with electric mobility and clean environment concepts.

Brazil

In 2014, Ampla invested a total of Ch\$ 137 billion, allocated to implementing new connections, improving the quality of distribution networks and carrying out projects to reduce energy losses. Ampla invested in control systems, through the use of technology and social activities.

Coelce invested Ch\$ 67 billion targeted at satisfying network and connection needs of clients and to support the recent sustained growth in demand in the State of Ceará.

Chile

During 2014, investments for Ch\$ 66.7 billion were made in projects focused on satisfying the increase of energy demand, quality of service, safety and information systems. Among them is the 75 MVA extension in transformation capacity, particularly in substations Lo Valledor, Santa Elena and Altamirano.

Chilectra continued with the construction of the 220 kV Chicureo Line and the 220/23 kV Chicureo Substation, which are expected to be operational during the first half of 2015. Chilectra also built the Maulen and Haydh feeders, both of 12 kV, in the Chacabuco and San Joaquín substations, respectively. In addition, for the supply of large clients, Chilectra built the Titanium and Vista Alegre feeders (also at 12 kV each) in the Vitacura and Bicentenario substations, respectively.

Finally, investments to increase medium voltage network automation continued by incorporating 80 new telecontrolled monitors, reaching a total of 600.

Colombia

In 2014, Codensa invested Ch\$ 106 billion in projects meant to ensure the sustainability and growth of the distribution business, mainly to service new demand, improve service quality, reliability of the distribution system and compliance of legal requirements.

Peru

In 2014, Edelnor invested Ch\$ 85 billion, representing an increase of 33.3% in comparison to 2013. The most important investments were the extension of capacity of transformation substations (Ch\$ 19.9 billion), the extension and strengthening of medium and low voltage networks (Ch\$ 15.3 billion), the extension of capacity in feeders in medium and low voltage (Ch\$ 4 billion), the assistance/electrification of new projects for the extension of electric networks in shanty towns (Ch\$ 4.9 billion), the safety improvement in facilities (Ch\$ 14.2 billion), the improvement in public lighting infrastructure (Ch\$ 3.8 billion) and other investments focused on reducing commercial losses (Ch\$ 3.4 billion).

Major Encumbrances

Costanera's supplier debt with Mitsubishi Corporation ("MC") corresponds to the remaining payments on equipment purchased from MC in November 1996, which was refinanced in October 2014. The value of the assets pledged to secure this debt was Ch\$ 16 billion as of December 31, 2014. Additionally, Costanera has granted liens in favor of Credit Suisse in guarantee of a loan, which were valued at Ch\$ 6 billion as of December 31, 2014.

Climate Change

In recent years, Chile and the region have seen an increase of developments related to NCRE and strategies to combat climate change. This has required both the public and private sectors to adopt strategies in order to comply with the new environmental requirements, as evidenced by legal obligations at the local level, commitments assumed by countries at the international level, and the demanding requirements of the international markets.

NCREs provide energy with minimal environmental impact and without CO₂ emissions. They are therefore considered technological options that strengthen sustainable energy development as they supplement the production of traditional generators.

The Canela wind farm (18 MW, in operation since 2007) and Canela II wind farm (60 MW, in operation since 2009) and the Callahuanca hydroelectric power station (80.2 MW in operation since 1938) are the NCRE facilities owned by Endesa Chile, and which have contributed clean and renewable energy to their respective national grids. Regarding the development of CO₂ emission reduction mechanisms, the projects in the Clean Development Mechanism ("CDM") circuit were as follows:

Canela Wind Farm: On April 3, 2009, the United Nations Framework Convention on Climate Change ("UNFCCC") approved the registration of the Canela project as a CDM project, which recognizes that this wind farm may verify and trade credits for greenhouse gas emissions that it will avoid during its useful life. On February 24, 2014, the UNFCCC approved the issuance of credits for 44,919 tons of CO₂ emissions for the operational period of 2009 through 2011. Certified Emission Reductions ("CERs") of subsequent periods have not yet been verified.

On August 8, 2013, the Canela wind farm achieved registration under the Gold Standard ("GS"). This allowed Endesa Chile to apply for the GS verification process, which would provide GS Voluntary Emission Reductions ("VER").

Canela II Wind Farm: On August 12, 2012, the UNFCCC approved the registration of the Canela II project as a CDM project, which recognizes that this wind farm may verify and trade the greenhouse gas emissions that it will avoid during its useful life.

Ventanilla Conversion from Single-cycle to Combined-cycle Power Generation Project: On June 20, 2011, the UNFCCC approved the registration of this project as a CDM, which recognizes that it may verify and trade the greenhouse gas emissions that it will be avoided during it useful life.

On October 31, 2013, the Ventanilla Conversion from Single-cycle to Combined-cycle Power Generation Project obtained the registration/verification under the VER + standard. A total amount of 2,496,494 tons of CO₂ were avoided during the period of October 19, 2006 through June 19, 2011. As a result of it, Edegel received credit for 2,496,494 tons of CO₂ emissions in the form of pre-CDM VERs.

The Rehabilitation of the Callahuanca Hydroelectric Power Station Project: On January 4, 2008, the UNFCCC approved the registration of this project as a CDM, which recognizes that it may verify and trade the greenhouse gas emissions that it will be avoided during it useful life.

On July 7, 2008 the Rehabilitation of the Callahuanca Hydroelectric Power Station Project obtained the registration/verification under the VER + standard. A total amount of 19,951 tons of CO₂ were avoided during 2007. As a result, Edegel received credit for 19,949 tons of CO₂ emissions in the form of pre-CDM VERs.

Detail of CDM Projects Processed in 2014 by Endesa Chile

CDM project	Company/country	Position as of December 31, 2014	Emission factor (tons CO _{2e} /MWh)	Approximate emissions avoided (tons CO _{2e} /year) ⁽¹⁾
Canela Wind Farm	Central Eólica Canela S.A. (Chile)	Registered with the Executive Authority of the UNFCCC since April 2009. Issuance of 44,919 CERs ⁽²⁾ during the period from 2009 to 2011.Subsequent periods are not yet verified.	0.5713	27,251
Canela Wind Farm	Central Eólica Canela S.A. (Chile)	Registered with the Gold Standard (Voluntary Standard) since August 2013.	0.5713	27,251 (VER not yet verified) (3)
Canela II Wind Farm	Central Eólica Canela S.A. (Chile)	Registered with the Executive Authority of the UNFCCC since August 2012. CDM procedure implemented.	0.6541	89,990
Ventanilla Conversion from Single- cycle to Combined-cycle Power Generation Project	Edegel (Peru)	Registered with the Executive Authority of the UNFCCC since 2011. CDM procedure implemented.	0.454	407,296
Ventanilla Conversion from Single- cycle to Combined-cycle Power Generation Project	Edegel (Peru)	Registered with the VER + Standard (Voluntary Standard) since October 2013.	0.454	407,296
Rehabilitation of the Callahuanca hydroelectric power station	Edegel (Peru)	Registered with the Executive Authority of the UNFCCC since 2008. CDM procedure implemented.	0.449	18,189
Rehabilitation of the Callahuanca hydroelectric power station	Edegel (Peru)	Registered with the VER + Standard (Voluntary Standard) since July 2008.	0.449	18,189

⁽¹⁾ Obtained from the PDD (Project Design Document) of each project.

In compliance with the group climate change guidelines, we have secured the certification of our carbon footprint for a third time. The independent certification authority of the Spanish Association of Standards and Certification (*Asociación Española de Normalización y Certificación* or "AENOR") has acknowledged the validity of the methodology. Acknowledgement by AENOR includes verification of the group's carbon footprint reports from 2009 to 2013, while for the 2014 report, the data will be audited during 2015. A carbon footprint is the sum of all greenhouse gases ("GHGs") produced by a company in the course of its business activity. We are striving to reduce our emissions as part of our commitment to combat climate change. The first step involves measuring our carbon footprint.

⁽²⁾ CER: Certified Emission Reductions.

⁽³⁾ VER: Voluntary Emission Reductions.

As part of the process of calculating our carbon footprint, we plan to obtain a GHG inventory, including direct emissions associated with activities controlled by us. We also plan to obtain a GHG inventory of indirect emissions, which are not generated through sources we control but are consequences of our activities.

The tools used to calculate emissions include audits and checks at all of our facilities. This enables us to monitor our carbon footprint throughout the entire electricity supply chain. Calculating the carbon footprint also enables us to identify phases of our activities with the greatest potential to boost energy efficiency and reduce emissions.

Item 4A. Unresolved Staff Comments

None

Item 5. Operating and Financial Review and Prospects

A. Operating Results.

General

The following discussion should be read in conjunction with our consolidated financial statements and the notes thereto, included in Item 18 in this Report, and "Selected Financial Data," included in Item 3 herein. Our consolidated financial statements as of December 31, 2014 and 2013 and for the three years ended December 31, 2014 have been prepared in accordance with IFRS, as issued by the IASB.

1. Discussion of Main Factors Affecting Operating Results and Financial Condition of the Company

We are an electricity holding company that owns and operates power generation, transmission, and distribution companies in Chile, Argentina, Brazil, Colombia, and Peru. Virtually all of our revenues, income and cash flows come from the operations of our subsidiaries, jointly-controlled companies and associates in these five countries.

Factors such as (i) hydrological conditions, (ii) fuel prices, (iii) regulatory developments, (iv) exceptional actions adopted by governmental authorities and (v) changes to the economic conditions in countries in which we operate may materially affect our financial results. In addition, our results from operations and financial condition are affected by variations in the exchange rates between the Chilean peso and the currencies of the other four countries in which we operate. These exchange variations may materially impact the consolidation of the results of our companies outside Chile. Lastly, we have certain critical accounting policies that affect our consolidated operating results.

Our diversification strategy aims to balance the impact of significant changes in one country with opposing changes in other countries, or within generation and distribution, in order to reduce, as much as practicable, the adverse impact of variations in the main factors that affect our consolidated operating results. The impact of these factors on us, for the years covered by this Report, is discussed below.

Prior to the 2013 capital increase, we did not have a direct participation in Emgesa, while Endesa Chile directly owned 26.9% of the equity interest and 31.3% of the voting rights of Emgesa (through the ownership of shares with voting rights). Although Endesa Chile owned less than 50% of the equity interest and the voting rights of Emgesa, Endesa Chile was deemed to exercise control over Emgesa as a result of the transfer of 25.1% of the voting rights to Endesa Chile by Enel Latinoamérica, as the holder of a 21.6% interest in Emgesa at the time, and pursuant to a shareholders' agreement with EEB (which owns 51.5% of the equity interest in Emgesa) signed on August 27, 1997. This agreement along with the voting rights gave Endesa Chile the right to appoint a majority of Emgesa's Board members and, therefore Endesa Chile historically consolidated Emgesa in its consolidated financial statements. In addition, after the contribution of Enel Latinoamérica's 21.6% interest in Emgesa to us in the 2013 capital increase, we transferred our 25.1% voting rights in Emgesa to Endesa Chile in the same manner as Enel Latinoamérica had done previously. As a result of this transfer, Endesa Chile directly owns 26.9% of the equity interest and 56.4% of the voting rights of Emgesa as of the date of this Report and continues to consolidate Emgesa in its consolidated financial statements and to appoint a majority of Emgesa's Board members. While we own less than 50% of the equity interests and the voting rights of Emgesa as of the date of this Report, Emgesa is regarded as our subsidiary because Endesa Chile's control over Emgesa.

On October 23, 1997, Enersis and Chilectra acquired 48.4% of the equity interest in Codensa through an international public bidding process held by the Colombian government. The remaining interest was held by EEB. As of the date of this Report, we own 48.4% of the equity interest and 57.2% of the voting rights of Codensa (through the ownership of shares with voting rights) both directly and indirectly through our ownership of Chilectra. While we own less than 50% of the equity interests, Codensa is regarded as our subsidiary because of our voting rights. Pursuant to a shareholders' agreement with EEB (which owns 51.6% of the equity interest in Codensa) signed on October 23, 1997 we have the right to appoint a majority of Codensa's Board members and, therefore, we consolidated Codensa in our consolidated financial statements.

Since April 1, 2013, we have consolidated certain companies contributed by Endesa Spain to us in connection with our 2013 capital increase, which affected the comparison of results of operations for the years ended December 31, 2013 and 2012. See "Item 10. Additional Information —B. Memorandum and Articles of Association — Capitalization."

Since May 2014, we have fully consolidated GasAtacama Holding and its subsidiaries, including GasAtacama, in our consolidated financial statements, as a result of Endesa Chile's purchase of an additional 50% of GasAtacama Holding's shares from Southern Cross Latin America Private Equity Fund III, L.P., which increased our economic interest in GasAtacama to 60.7%. Before this transaction, the companies were recognized as jointly-controlled companies. The measurement of the fair value of the 50% pre-existing stake we had already held in GasAtacama Holding resulted in a gain of Ch\$ 21.5 billion. Since the date of acquisition, GasAtacama Holding has contributed Ch\$ 113.1 billion in revenues and Ch\$ 33.4 billion in income before tax to our results.

a. Generation Business

A substantial part of our generation capacity depends on the hydrological conditions prevailing in the countries in which we operate, although generally only extreme hydrological conditions would materially affect our operating results and financial condition. In terms of installed capacity as of December 31, 2014 (8,828 MW), 2013 (8,677 MW) and 2012 (8,666 MW), 52%, 55% and 57%, respectively, was hydroelectric. See "Item 4. Information on the Company – D. Property, Plant and Equipment."

Hydroelectric generation was 34,000 GWh in 2014, 30,869 GWh in 2013 and 34,499 GWh in 2012. Our 2014 hydro generation was higher than in 2013 mainly due to more favorable hydrological conditions in Chile, Argentina and Colombia. Nevertheless, some important reservoirs, principally in Chile and Argentina, are still at low levels due to droughts over the last four years, characterized by low rainfalls and a poor snowmelt. Several years of good hydrological conditions are needed to reach historical normal levels.

In order to mitigate hydrological risk, hydroelectric generation in Chile had to be substituted with thermal generation (natural gas, LNG, coal or diesel) and energy purchases on the spot market, both of which resulted in higher costs, in order to meet our obligations under contracts with both regulated and unregulated customers.

Our thermal generators burn natural gas, LNG, coal or diesel. We can offset the effect of poor hydrological conditions (reservoir levels, rain and snow) with thermal generation and electricity purchases. Our thermal installed capacity and the ability to purchase electricity from other generators allow us to increase thermal generation and/or purchase electricity from competitors to meet our energy commitments. In addition, given the industry structure and the percentage of hydroelectric generation capacity in the countries in which we operate, when hydrological conditions are poor, electricity prices generally increase. Under certain circumstances, poor hydrological conditions can potentially lead to higher revenues and sometimes, higher operating income.

On December 17, 2013 the local Court of Concepción ordered the temporary shutdown of the Bocamina II power plant. The court ruled in favor of a local fishermen's union based on claims that our Bocamina II coal-fired facility adversely affected marine life and polluted ocean water. Endesa Chile submitted several documents and studies, mitigation plans to the authorities, as well as a new Environmental Impact Study regarding the optimization of the plant. Nevertheless, the plant and all the related facilities remained closed during 2014. On March 16, 2015, the Chilean Court approved the new RCA; therefore the power plant may be in operation within the first half of 2015, after complying with the conditions established in the new RCA.

Operating costs in connection with thermal generation and energy purchases are higher than the variable cost of hydroelectric generation in normal hydrological conditions. The cost of thermal generation does not depend on hydrology but instead on global commodity prices for natural gas, coal, LNG and diesel. However, the cost of electricity purchases in the spot market does depend on hydrology and commodity prices.

The impact of poor hydrological conditions on our operating results depends on the effects of such conditions on the electricity market prices, on our hydroelectric generation, our cost of thermal generation, and our need for energy purchases. The effect of poor hydrological conditions on market prices may increase or decrease our operating margin, depending on several relevant market factors. In recent years, additional thermal capacity has helped to offset poor hydrology, resulting in better operating margins.

For additional information on the effects of hydrological conditions on our operating results, see "Item 3. Key Information — D. Risk Factors — Because our generation business depends heavily on hydrological conditions, droughts may adversely affect our profitability."

b. Distribution Business

Our electricity distribution business is conducted in Chile through Chilectra, in Argentina through Edesur, in Brazil through Ampla and Coelce, in Colombia through Codensa, and in Peru through Edelnor. For the year ended December 31, 2014, electricity sales increased by 2.9% compared to 2013, totaling 77,631 GWh. Currently these six distributors serve important South American cities, providing electricity to over 14.7 million customers. These companies face growing electricity demand, because of organic growth in demand, which obliges them to continually invest in their facilities.

Among the key factors that impact on financial results are regulations. This is especially true when the actions adopted by government authorities define or intervene with directly regulated customer tariffs, or affect the price at which distributors can buy their energy. In addition, we are focusing on reducing the losses, especially those due to illegally tapped energy, and improving our collectability indexes in order to improve our efficiency. The ability to buy electricity relies highly on generation availability and government regulation. Currently, Chilectra is the technical operator of Edesur, Edelnor, Ampla and Coelce, but does not receive operator fees.

c. Selective Regulatory Developments

The regulatory framework governing our businesses in the five countries in which we operate has a material effect on our results of operations. In particular, regulators set (i) energy prices in the generation business, taking into consideration factors such as fuel costs, reservoir levels, exchange rates, future investments in installed capacity and demand growth, and (ii) distribution tariffs taking into account the costs of energy purchases paid by distribution companies (which distribution companies pass on to their customers) and the "Value Added from Distribution," or VAD, all of which are intended to reflect investment and operating costs incurred by distribution and generation companies and to allow our companies to earn a regulated level of return on their investments and guarantee service quality and reliability. The earnings of our electricity subsidiaries are determined to a large degree by government regulators, mainly through the tariff setting process.

Over the next few years, ordinary tariff reviews will continue in each country. For example, Coelce in Brazil has been reviewed in early 2015 and Codensa in Colombia will also be reviewed later in the year. Chilectra's tariffs will be reviewed in 2016, and Edelnor's in 2017. Each of these reviews presents its own particularities and challenges. In geographic regions such as South America, tariff reviews seek to capture economies of scale based on economic growth.

In Argentina, the Argentine Secretary of Energy published Resolution 95/2013 and Resolution 529/2014 in 2013 and 2014, respectively, which set forth a non-recurring regulated remuneration schedule for power generation activity effective retroactively as of February 2013. On May 7, 2013, the Secretary of Energy approved Resolution 250/2013, which defined the residual value of the funds owed to Edesur, thereby allowing the payment of debts that Edesur incurred under the PUREE efficiency program, among others. For additional information relating to the Argentine regulatory framework, see "Item 4. Information on the Company — B. Business Overview — Electricity Industry Regulatory Framework —Argentina— Industry Overview — Industry Structure."

For additional information relating to the regulatory frameworks in the countries where we operate, see "Item 4. Information on the Company — B. Business Overview — Electricity Industry Regulatory Framework."

d. Economic Conditions

Macroeconomic conditions, such as changes in employment levels and inflation or deflation in the countries in which we operate may have a significant effect on our operating results. Macroeconomic factors, such as the variation of a local currency against the U.S. dollar, may impact our operating results, as well as our assets and liabilities, depending on the percentage denominated in U.S. dollars. For example, a devaluation of local currencies against the U.S. dollar increases the cost of capital expenditure plans. For additional information, see "Item 3. Key Information — D. Risk Factors — Foreign exchange risks may adversely affect our results and the U.S. dollar value of dividends payable to ADS holders" and "— South American economic fluctuations are likely to affect our results from operations and financial condition as well as the value of our securities."

In order to determine if Argentina could be qualified as a hyperinflationary economy, we have considered the behavior of historical and projected inflation, along with other indicators established in IAS 29, Financial Reporting in Hyperinflationary Economies. We have also taken into consideration various analyses and studies issued by international agencies such as the International Practices Task Force of the U.S. SEC Regulations Committee, which have suggested that Argentina is not currently a hyperinflationary economy. In addition, we have checked our peers in Argentina and, in that context, have noted that publicly held Argentine companies which adopted IFRS have not introduced adjustments to reflect inflation since the date of their transition to IFRS.

In February 2013, the Argentine National Statistics and Census Institute ("Instituto Nacional de Estadística y Censos") issued a new inflation index that measures national prices of goods, and replaces the previous index that only measured inflation in the Buenos Aires metropolitan area. This new index represents a substantial change in comparison to the previous one, and shows a significant structural deviation that prevents the comparability of data with previous years.

We have not observed objective verifiable data leading to a conclusion that the Argentine economy should be considered a hyperinflationary economy in accordance with the indicators set forth in IAS 29.

Local Currency Exchange Rate

Variations in the parity of the U.S. dollar and the local currency in each of the countries in which we operate may have an impact on our operating results and overall financial position. The impact will depend on the level at which tariffs are pegged to the U.S. dollar, U.S. dollar-denominated assets and liabilities and also the translation of financial statements of our foreign subsidiaries for consolidation purposes to the presentation currency, which is the Chilean peso.

As of December 31, 2014, we had total consolidated indebtedness of Ch\$ 3,711 billion (net of currency hedging instruments), of which 29.7% was denominated in U.S. dollars, 33.8% in Colombian pesos, 19.0% in Brazilian reais, 9.2% in Chilean pesos (including the Chilean UF, which is inflation-indexed), 7.3% in Peruvian soles and 1.0% in Argentine pesos.

The following table sets forth the closing and average local currencies per U.S. dollar exchange rates for the years indicated.

	Local Currency U.S. Dollar Exchange Rates							
	2014		2013		2012			
	Average	Year End	Average	Year End	Average	Year End		
Chile (Chilean pesos per U.S. dollar)	570.4	606.75	495.18	524.61	486.59	479.96		
Argentina (Argentine pesos per U.S. dollar)	8.11	8.55	5.48	6.52	4.55	4.92		
Brazil (reais per U.S. dollar)	2.35	2.66	2.16	2.34	1.95	2.04		
Colombia (Colombian pesos per U.S. dollar)	1,997	2,392	1,870	1,927	1,798	1,768		
Peru (soles per U.S. dollar)	2.84	2.99	2.70	2.80	2.64	2.55		

Sources: Central banks of each country.

For the year ended December 31, 2014, our revenues were Ch\$ 7,253.9 billion or US\$ 12.7 billion, of which 31.2% was generated in Brazil, 28.3% in Chile, 22.1% in Colombia, 11.0% by Peru and 7.4% in Argentina.

Argentina

Our Argentine operations do not affect our consolidated liquidity. As a result of the Argentine economic crisis in the early 2000s and the significant governmental intervention in the electricity sector in 2002, we have not received dividends from our Argentine subsidiaries Costanera, Edesur, El Chocón and Dock Sud since 2000, 2009, 2012 and 2013 (the year Dock Sud became our subsidiary), respectively. In 2011, we recorded a Ch\$ 5.4 billion goodwill impairment charge for Costanera and a Ch\$ 115.4 billion infrastructure and goodwill impairment charge for Edesur. Additional economic deterioration of Argentina, or of our subsidiaries that operate in that country, is not expected to have any material effect on our financial and operating results.

Our Argentine liquid assets were Ch\$ 25.9 billion as of December 31, 2014, which represents 1.5% of our total liquid assets. Of the total Argentine liquid assets, 95.9% is denominated in local currency, and the remaining 4.1% is denominated in U.S. dollars. Our Argentine debt was Ch\$ 80.1 billion as of December 31, 2014, representing 2.2% of our total debt. Of the total Argentine debt, 45.1% is denominated in local currency, and the remaining 54.9% is denominated in U.S. dollars. The currency translation effect of converting the statements of comprehensive income from the Argentine peso to the Chilean peso led to a 22.3% decrease in the amount of Chilean pesos in 2014 compared to 2013. A default by any of our Argentine subsidiaries on their indebtedness would not affect us or Endesa Chile. For more information, see "Item 5. Operating and Financial Review and Prospects. — B. Liquidity & Capital Resources."

The Argentine government has avoided increasing electricity tariffs to end customers, and seasonal prices have remained fixed in Argentine pesos. On the other hand, a generation company's tariffs are also regulated based on defined fixed and variable remuneration. Due to rate controls, revenues of electric utility companies do not always cover their operating costs. Argentine authorities have created a new mechanism to improve the financial situation of these companies, in recognition that their performance is directly related to the regulatory framework. For more detail, see "Item 4. Information on the Company — B. Business Overview — Electricity Industry Regulatory Framework. — Argentina."

e. Critical Accounting Policies

Critical accounting policies are defined as those that reflect significant judgments and uncertainties which would potentially result in materially different results under different assumptions and conditions. We believe that our critical accounting policies are limited to those described below with reference to the preparation of our consolidated financial statements under IFRS.

For further detail of the accounting policies and the methods used in the preparation of the consolidated financial statements, see Notes 2 and 3 of the Notes to our consolidated financial statements.

Impairment of Long-Lived Assets

During the year, and principally at year end, we evaluate whether there is any indication that an asset has been impaired. Should any such indication exist, we estimate the recoverable amount of that asset to determine, where appropriate, the amount of impairment. In the case of identifiable assets that do not generate cash flows independently, we estimate the recoverability of the cash generating unit to which the asset belongs, which is understood to be the smallest identifiable group of assets that generates independent cash inflows.

Notwithstanding the preceding paragraph, in the case of cash generating units to which goodwill or intangible assets with an indefinite useful life have been allocated, a recoverability analysis is performed routinely at each period end.

The recoverable amount is the greater between the fair value less the cost needed to sell and the value in use, which is defined as the present value of the estimated future cash flows. In order to calculate the recoverable value of property, plant and equipment, goodwill and intangible assets, we use value in use criteria in nearly all cases.

To estimate the value in use, we prepare future pre tax cash flow projections based on the most recent budgets available. These budgets incorporate management's best estimates of cash generating units' revenues and costs using sector projections, past experience and future expectations.

In general, these projections cover the next ten years, estimating cash flows for subsequent years by applying reasonable growth rates, between 2.2% and 7.7%, which in no case are increasing nor exceed the average long-term growth rates for the particular sector and country.

These cash flows are discounted at a given pre-tax rate in order to calculate their present value. This rate reflects the cost of capital of the business and the geographical area in which the business is conducted. The discount rate is calculated taking into account the current time value of money and the risk premiums generally used by market participants for the specific business activity and the country involved.

The pre tax nominal discount rates applied in 2014, 2013 and 2012 are as follows:

		Year ended December 31,						
		20	14	20	13	2012		
Country	Currency	Minimum	Maximum	Minimum	Maximum	Minimum	Maximum	
		(in %)						
Chile	Chilean peso	7.9	13.0	7.8	16.3	8.0	14.6	
Argentina	Argentine peso	23.3	38.9	39.2	44.4	26.0	29.0	
Brazil	Brazilian reais	9.7	22.7	9.0	18.8	9.5	18.0	
Colombia	Colombian peso	8.0	13.3	8.5	14.2	8.4	14.5	
Peru	Peruvian Nuevo sol	7.3	14.3	7.3	13.9	7.6	12.5	

Sources: Central banks of each country.

If the recoverable amount is less than the net carrying amount of the asset, the corresponding impairment loss provision is recognized for the difference, and charged to "Reversal of impairment loss (impairment loss) recognized in profit or loss" in the consolidated statement of comprehensive income.

Impairment losses recognized for an asset in prior periods are reversed when its estimated recoverable amount changes, increasing the asset's value with a credit to earnings, limited to the asset's carrying amount if no adjustment had occurred. In the case of goodwill, any adjustments made are not reversible.

Litigation and Contingencies

We are currently involved in certain legal and tax proceedings. As discussed in Note 24 of the Notes to our consolidated financial statements as of December 31, 2014, we have estimated the probable outflows of resources for resolving these claims to be Ch\$ 224 billion. We have reached this estimate after consulting our legal and tax advisors who are carrying out our defense in these matters and an analysis of potential results, assuming a combination of litigation and settlement strategies.

Hedge Revenues Directly Linked to the U.S. Dollar

We have established a policy to hedge the portion of our revenues directly linked to the U.S. dollar by obtaining financing in U.S. dollars. Exchange differences related to this debt, as they are cash flow hedge transactions, are charged net of taxes to an equity reserve account and recorded as income during the period in which the hedged cash flows are realized. This term has been estimated at ten years.

This policy reflects a detailed analysis of our future U.S. dollar revenue streams. Such analysis may change in the future due to new electricity regulations limiting the amount of revenues tied to the U.S. dollar.

Pension and Post-Employment Benefits Liabilities

We have various defined benefits plans for our employees. These plans pay benefits to employees at retirement and use formulas based on years of service and the compensation of the participants. We also offer certain additional benefits for some retired employees in particular.

The liabilities shown for the pensions and post-employment benefits reflect our best estimate of the future cost of meeting our obligations under these plans. The accounting applied to these defined benefit plans involves actuarial calculations which contain key assumptions that include employee turnover, life expectancy, retirement ages, discount rates, the future level of compensation and benefits, the claims rate under medical plans and future medical costs. These assumptions change as economic and market conditions vary and any change in any of these assumptions could have a material effect on the reported results from operations.

The effect of an increase of one percentage point in the discount rate used to determine the present value of the post-employment defined benefits would decrease the liability by Ch\$ 46.8 billion in 2014, Ch\$ 42.0 billion in 2013 and Ch\$ 59.0 billion in 2012 and the effect of a decrease of one percentage point in the rate used to determine the present value of the post-employment defined benefits would increase the liability by Ch\$ 56.7 billion in 2014, Ch\$ 49.3 billion in 2013 and Ch\$ 70.8 billion in 2012.

Recent Accounting Pronouncements

Please see Note 2.2 of the Notes to our consolidated financial statements for additional information regarding recent accounting pronouncements.

2. Analysis of Results of Operations for the years ended December 31, 2014 and 2013.

Revenues

Generation and Transmission Business

The following table sets forth the electricity sales of our subsidiaries and the corresponding changes for the years ended December 31, 2014 and 2013.

	Electricity sales during the year ended December 31,			
	2014	2013	Change	Change
		(in GWh)		(in %)
Endesa and subsidiaries (Chile)	21,157	20,406	751	3.7
Costanera (Argentina)	7,051	8,962	(1,911)	(21.3)
El Chocón (Argentina)	3,391	3,392	(1)	0.02
Dock Sud (Argentina)	4,834	4,195	639	15.2
Cachoeira Dourada (Brazil)	3,903	3,564	339	9.5
Fortaleza (Brazil)	3,205	3,262	(57)	(1.7)
Emgesa (Colombia)	15,773	16,090	(317)	(2.0)
Edegel (Peru)	9,320	8,903	417	4.7
EEPSA (Peru)	596	594	2	0.3
Total	69,230	69,369	(138)	(0.2)

Distribution Business

Distribution revenues are mainly derived from the resale of electricity purchased from generators. Revenues associated with distribution include the recovery of the cost of electricity purchased and the resulting revenue from the VAD, which is associated with the recovery of costs and the return on the investment with respect to the distribution assets, plus the physical energy losses permitted by the regulator. Other revenues derived from our distribution services consist of charges for new connections and the maintenance and rental of meters, among others.

The following table sets forth the electricity sales of our subsidiaries, by country, and their corresponding variations for the years ended December 31, 2014 and 2013.

	Electricity sales during the year ended December 31,			
	2014 2013		Change	Change
	(in GV	Vh)	(in '	%)
Chilectra (Chile)	15,702	15,152	550	3.6
Edesur (Argentina)	18,025	18,137	(112)	(0.6)
Ampla (Brazil)	11,701	11,049	652	5.9
Coelce (Brazil)	11,177	10,718	459	4.3
Codensa (Colombia)	13,667	13,342	325	2.4
Edelnor (Peru)	7,359	7,045	314	4.5
Total	77,631	75,443	2,188	2.9

Revenues by Business Segment

The table below presents our revenues by business segment for the years ended December 31, 2014 and 2013.

	2014	2013	Change	Change
	(in	millions of Ch\$)		(in %)
Generation and Transmission Business				
Endesa and subsidiaries (Chile)	1,216,579	955,702	260,877	27.3
Costanera (Argentina)	75,194	94,888	(19,694)	(20.8)
El Chocón (Argentina)	30,174	36,687	(6,513)	(17.8)
Dock Sud (Argentina)	61,606	41,186	20,420	49.6
Cemsa (Argentina)	1,281	1,591	(310)	(19.5)
Cachoeira Dourada (Brazil)	158,965	117,445	41,520	35.4
Fortaleza (Brazil)	210,793	168,871	41,922	24.8
CIEN (Brazil)	70,800	67,689	3,111	4.6
Emgesa (Colombia)	753,373	639,503	113,870	17.8
Edegel (Peru)	353,795	283,806	69,989	24.7
EEPSA (Peru)	50,849	33,752	17,097	50.7
Total	2,983,409	2,441,120	542,289	22.2
Distribution Business				
Chilectra and subsidiaries (Chile)	1,127,893	975,024	152,869	15.7

Total	7,253,876	6,264,446	989,430	15.8

Generation and Transmission Business: Revenues

Revenues in Chile increased by Ch\$ 260.9 billion, or 27.3% in 2014, mainly due (i) Ch\$ 147.8 billion as a consequence of an increase in physical sales of 3.7% and a 29.5% increase in average energy sales prices, and (ii) operating revenue contributed by the subsidiary GasAtacama of Ch\$ 113.1 billion, a subsidiary consolidated since May 2014.

In Argentina, revenues from Costanera fell by Ch\$ 19.7 billion, or 20.8% in 2014, as a result of lower electricity sales of 1,911 GWh, or Ch\$ 23.9 billion, compared to the previous year and the effects of converting the statement of comprehensive income from the Argentine peso to the Chilean peso of Ch\$ 21.2 billion. This was partially offset by higher revenues under the availability contract signed with the Argentine regulator of Ch\$16.3 billion and increased revenue of Ch\$ 9.1 billion from the application of Resolution 529 adopted by the Argentine Secretary of Energy, which provided for greater payments by CAMMESA commencing as of February 2014. Electricity sales were 7,051 GWh as of December 31, 2014, compared to 8,962 GWh in 2013. Revenues from El Chocón decreased by 17.8% or Ch\$ 6.5 billion, mainly due to the effects of translating the statement of comprehensive income from the Argentine peso to the Chilean peso. Electricity sales totaled 3,391 GWh for the year ended December 31, 2014, almost at the same level as in 2013 (3,392 GWh). Revenues of Dock Sud also increased by Ch\$ 20.4 billion, mainly as a consequence of increased physical sales by 639 GWh in 2014 as compared to 2013 resulting from our consolidation of Dock Sud since April 2013, following our 2013 capital increase. (See "Item 4. Information on the Company— B. Business Overview — Electricity Industry Regulatory Framework — Argentina — Regulatory Developments" for further detail).

The "currency translation effect" is obtained by translating results from the local currency of each country to Chilean pesos. The currency translation effect of converting the statement of comprehensive income from the Argentine peso to the Chilean peso in Argentina led to a 22.3% decrease in 2014, when compared to 2012.

In Brazil, revenues from Cachoeira Dourada rose by Ch\$ 41.5 billion, or 35.4%, in 2014, as a result of higher physical energy sales by 339 GWh to a total of 3,903 GWh for the year ended December 31, 2014, and higher spot market sale prices. Revenues from Fortaleza increased by 24.8% or Ch\$ 41.9 billion for the year 2014 due to higher average sale prices despite lower physical sales of 57 GWh, which in 2014 totaled 3,205 GWh. Revenues from CIEN improved by 4.6% or Ch\$ 3.1 billion mainly due to the effect of the translation from Brazilian reais to Chilean pesos. The effect of translating the statement of comprehensive income from Brazilian reais to Chilean pesos in both periods resulted in a 5.7% increase in terms of Chilean pesos in 2014 compared to 2013.

Revenues from Emgesa, in Colombia, increased by Ch\$ 113.9 billion, or 17.8%, in 2014, mainly due to the increase in the average energy sale prices in terms of Chilean pesos and the effect of the currency translation, offset by lower physical sales of 317 GWh, which totaled 15,773 GWh in 2014. The effect of translating the statement of comprehensive income from Colombian pesos to Chilean pesos in both years resulted in an increase in Chilean peso terms of 7.6% in 2014 compared to 2013.

Revenues from Edegel in Peru increased by Ch\$ 70.0 billion, or 24.7%, in 2014, as a result of higher physical sales of 417 GWh, amounting 9,320 GWh for the year 2014, and higher average sales prices. In EEPSA, revenues were 50.7%, or Ch\$ 17.1 billion, higher than in 2013 mainly reflecting higher average sales prices, considering that physical energy sales remained stable at 596 GWh for 2014 (2 GWh of increase when compared to 2013). EEPSA has been consolidated since April 2013, following our 2013 capital increase. The effect of translating the financial statements from Peruvian soles to Chilean pesos for both years, resulted in a 9.6% increase in Chilean peso terms in 2014 compared to 2013.

Distribution Business: Revenues

Revenues from our subsidiary Chilectra, in Chile, increased by Ch\$ 152.9 billion, or 15.7%, in 2014 as a result of greater physical energy sales of 550 GWh due to lower temperatures and higher rainfalls than the previous year. Sales in 2014 amounted to 15,702 GWh. The number of customers rose by 43,375, totaling 1.7 million.

Revenues from Edesur in Argentina fell by Ch\$ 157.2 billion, or 29.7%, in 2014 due to lower recognition of tariffs compared to 2013. In 2014, this amounted to Ch\$ 144.3 billion compared with Ch\$ 250.5 billion in 2013 due to the effects of Resolution 250/2013 which recognizes costs not transferred to tariffs in 2013 for the period from 2007 to September 2013 and in 2014 for the period from October 2013 to December 2014. In addition, sales revenue decreased by Ch\$ 47.9 billion mainly due to the effect of converting Argentine pesos to Chilean pesos and the recognition of service quality fines of Ch\$ 11.9 billion. The effect of translating the statement of comprehensive income from Argentine pesos to Chilean pesos in both years led to a 22.3% decrease in Chilean pesos in 2014 as compared to 2013. Physical sales declined by 0.6% to 18,025 GWh as of December 2014. The number of customers grew by 20,104, totaling nearly 2.5 million.

In Brazil, revenues from our subsidiary Ampla rose by Ch\$ 147.1 billion, or 15.6%, in 2014, mainly as the result of the recognition of increased regulatory revenue approved by the Brazilian government in December 2014 of Ch\$ 85.0 billion following the signature of an addendum to the concession contracts which recognize as indemnifiable regulatory assets and liabilities pending recovery and/or compensation in subsequent tariff periods. Revenues also rose as a result of the increase in physical energy sales of 5.9%, totaling 11,701 GWh in 2014. The number of customers rose by 73,865, reaching nearly 2.9 million. Revenues from Coelce increased by Ch\$ 188 billion, or 27.3%, in 2014, mainly due to the recognition of greater regulatory revenues approved by the Brazilian government in December 2014 of Ch\$ 74.3 billion and an increase in physical energy sales of 4.3%, reaching 11,177 GWh in 2014. The number of customers rose by 125,053, totaling more than 3.6 million. The effect of translating the statements of comprehensive income from Brazilian reais to Chilean pesos resulted in an increase of 5.7% in Chilean pesos terms compared to 2013.

Revenues from Codensa increased by Ch\$130 billion, or 15.2%, in 2014 mainly due to higher physical sales and the effect of converting Colombian pesos to Chilean pesos which produced an increase in Chilean pesos of 7.6% compared to 2013. Physical energy sales rose by 2.4% to 13,667 GWh in 2014. The number of customers rose by 85,457, reaching nearly 2.8 million.

In Peru, revenues from Edelnor rose by Ch\$ 64.8 billion, or 15.7%, in 2014 mainly due to higher physical energy sales of 314 GWh, totaling 7,359 GWh in 2014 and the effect of translating the financial statements from Peruvian soles to Chilean pesos which resulted in a 9.6% increase in Chilean pesos compared to 2013. The company added almost 38,879 new customers, totaling nearly 1.3 million.

Operating Costs

Operating costs consist primarily of electricity purchases from third parties, fuel purchases, depreciation, amortization and impairment losses, maintenance costs, tolls paid to transmission companies, and employee salaries. Operating costs also include administrative and selling expenses. The following table shows the breakdown of our consolidated operating costs, as a percentage of total consolidated operating costs, for the years ended December 31, 2014 and 2013. Our cost structure remained substantially the same in 2014 and 2013.

	Year ended Deco	ember 31,
	2014	2013
Operating Costs as a Percentage of Total Operating Costs	(in %)	
Electricity purchases	47.6	40.2
Fuel purchases	9.3	8.5
Other variable cost	7.3	10.8
Other fixed costs	10.5	11.5
Depreciation, amortization and impairment losses	9.7	11.3
Transmission tolls	7.6	8.8
Staff benefit costs	8.0	8.9
Total	100	100

The table below sets forth the breakdown of operating costs (excluding selling and administrative expenses) by company for the years ended December 31, 2014 and 2013:

	Year ended December 31,			
	2014	2013	Change	Change
	(in	millions of Ch\$)		(in %)
Generation and Transmission Business				
Endesa and subsidiaries (Chile)	743,812	488,427	255,385	52.3
Costanera (Argentina)	6,777	24,318	(17,541)	(72.1)
El Chocón (Argentina)	8,427	12,161	(3,733)	(30.7)
Dock Sud (Argentina)	34,976	23,933	11,044	46.1
Cemsa (Argentina)	203		203	n.a.
Cachoeira Dourada (Brazil)	72,988	23,087	49,903	216.2
Fortaleza (Brazil)	158,318	106,806	51,513	48.2
CIEN (Brazil)	3,343	12,362	(9,020)	(73.0)
Emgesa (Colombia)	220,405	204,500	15,905	7.8
Edegel (Peru)	133,735	95,079	38,655	40.7
EEPSA (Peru)	20,916	19,030	1,886	9.9
Total	1,403,902	1,009,703	394,199	39.0
Distribution Business				
Chilectra and subsidiaries (Chile)	855,750	712,458	143,292	20.1

Generation and Transmission Business: Operating Costs

Operating costs in Chile increased by Ch\$ 255.3 billion, or 52.3%, in 2014, mainly due to greater purchases of energy on the spot market of Ch\$ 164.0 billion, principally as a consequence of the stoppage of Bocamina II coal fired power plant since December 2013, and higher fuel consumption costs of Ch\$ 93.9 billion mainly as a consequence of the full consolidation of GasAtacama since May 2014, which added Ch\$ 53.9 billion of fuel consumption costs and higher other variable procurement and services of Ch\$ 4.0 billion, partially compensated by lower transportation costs of Ch\$ 6.6 billion.

In Argentina, due to Resolution 95 and subsequent Resolution 529, the marginal remuneration system in the Argentine electricity generation market has ended. Remuneration is now determined by technology and capacity. The basis for the remuneration is the recognition of fixed (to be determined by availability) and variable costs, plus an additional payment (based on energy generated). As a result, Costanera's operating costs declined by Ch\$ 17.5 billion, or 72.1%, in 2014, primarily as a consequence of an 18.2% decline in its generation which in turn reduced its fuel expenses by Ch\$ 7.6 billion and its energy purchases by Ch\$ 7.1 billion, related to lower energy sales. Operating costs of El Chocón were Ch\$ 3.7 billon lower, or 30.7%, in 2014, mostly due to lower energy purchases of Ch\$ 3.8 billion related to a higher generation in the period. Operating costs of Dock Sud rose by Ch\$ 11 billion, or 46.1%, in 2014, mainly due to increased fuel expenses of Ch\$ 13.1 billion and higher transportation expenses of Ch\$ 0.9 billion, compensated by reduced energy purchases of Ch\$ 2.4 billion. (See "Item 4. Information on the Company— B. Business Overview — Electricity Industry Regulatory Framework — Argentina — Regulatory Developments" for further detail).

In Brazil, operating costs of Cachoeira Dourada increased by Ch\$ 49.9 billion, or 216.2%, in 2014, mainly due to higher energy purchases of Ch\$ 51.8 billion due to the drought and higher average purchase prices. Operating costs of Fortaleza rose by Ch\$ 51.5 billion, or 48.2%, in 2014, due to higher energy purchases of Ch\$ 52.2 billion related to the increase in the energy price due to the shortage of rain and maintenance to the power plant, a higher fuel consumption of Ch\$7.1 billion and higher transportation expenses of Ch\$2.1 billion, offset by reduced other variable procurement and services expenses of Ch\$ 9.9 billion. Operating costs of CIEN decreased by Ch\$ 9.0 billion, or 73.0%, in 2014, mainly due to other variable procurement and services expenses of Ch\$ 8.4 billion.

In Colombia, operating costs of Emgesa increased by Ch\$ 15.9 billion, or 7.8%, in 2014, principally due to higher other variable procurement and services expenses of Ch\$ 16.1 billion related to environmental royalties and other technical support services and higher transportation expenses of Ch\$ 9.0 billion. This was partially offset by lower energy purchases of Ch\$ 7.4 billion resulting from reduced physical sales and reduced fuel consumption of Ch\$ 1.9 billion, partly due to decreased thermal generation.

In Peru, operating costs of Edegel rose by Ch\$ 38.7 billion, or 40.7%, in 2014, due to higher fuel consumption of Ch\$ 14.0 billion due to higher thermal generation, higher energy purchases of Ch\$ 13.4 billion in response to increased demand and higher transportation expenses of Ch\$ 12.1 billion. In EEPSA, operating costs increased by Ch\$ 1.9 billion, or 9.9%, in 2014, mainly due to higher fuel consumption of Ch\$ 6.3 billion and higher other transportation expenses of Ch\$ 0.6 billion, compensated by reduced energy purchases of Ch\$ 5.0 billion.

Distribution Business: Operating Costs

Operating costs of Chilectra increased by Ch\$ 143.3 billion, or 20.1%, in 2014, mainly due to greater energy purchases of Ch\$ 137.9 billion to cover the higher physical energy sales. Physical energy losses remained at 5.3% in both periods.

Operating costs of Edesur declined by Ch\$ 7.8 billion, or 4.6%, in 2014, mainly due to lower energy purchases of Ch\$ 7.5 billion resulting from a slight fall in physical energy sales. Physical energy losses declined by 0.1 percentage points to 10.7% in 2014.

In Brazil, operating costs of our subsidiary Ampla increased by Ch\$ 132.8 billion, or 23.1%, in 2014, mainly due to increased energy purchases of Ch\$ 189.0 billion, affected by higher prices caused by the drought and higher transportation costs of Ch\$ 4.2 billion, compensated by reduced other variable procurement and services expenses of Ch\$ 60.3 billion. Physical energy losses rose by 0.3 percentage points, from 19.8% to 20.1% in 2014. In Coelce, operating costs rose by Ch\$ 120.7 billion, or 24.8%, in 2014, mainly due to increased energy purchases of Ch\$ 154.2 billion, affected by higher prices caused by the drought, and higher transportation expenses of Ch\$ 10.8 billion, compensated by lower other variable procurement and services expenses of Ch\$ 44.3 billion. Energy losses rose by 0.2 percentage points to 12.7% in 2014.

In Codensa, our Colombian distribution company, operating costs rose by Ch\$ 83.1 billion, or 17.9%, in 2014, mainly due to greater energy purchases of Ch\$ 66.7 billion reflecting both higher physical purchases and a higher average purchase price, higher transportation expenses of Ch\$ 9.2 billion and higher other variable procurement and services expenses of Ch\$ 7.2 billion. Energy losses rose by 0.2 percentage points to 7.2% in 2014.

Operating costs of Edelnor increased by Ch\$ 48.7 billion, or 18.3%, in 2014, mainly due to larger energy purchases of Ch\$ 50.8 billion to cover increased demand in the period, partially compensated by reduced other variable procurement and services expenses of Ch\$ 2.1 billion. Energy losses remained at 8.0%, the same as the previous year.

Selling and Administrative Costs

Selling and administrative expenses relate to salaries, compensation, administrative expenses, depreciation, amortization and impairment losses, and office materials and supplies.

The following table shows the breakdown of our consolidated selling and administrative expenses, as a percentage of total consolidated selling and administrative expenses, for the years ended December 31, 2014 and 2013:

	Year ended December 31		
	2014	2013	
Operating Costs as a Percentage of Total Operating Costs	(in %))	
Other fixed costs	37.2	36.3	
Staff benefit costs	28.4	28.1	
Depreciation, amortization and impairment losses	34.4	35.6	
Total	100	100	

The table below sets forth the breakdown of selling and administrative expenses by company for the years ended December 31, 2014 and 2013:

	Year ended December 31,			
	2014	2013	Change	Change
	(in	millions of Ch\$)		(in %)
Generation and Transmission Business				
Endesa and subsidiaries (Chile)	222,669	201,995	22,674	10.2
Costanera (Argentina)	54,715	49,426	5,289	10.7
El Chocón (Argentina)	7,408	10,290	(2,882)	(28.0)
Dock Sud (Argentina)	17,165	19,789	(2,624)	(13.3)

Total	980,000	911,612	68,388	7.5
Less: consolidation adjustments and non-core activities	(29,987)	(35,632)	(5,645)	(15.8)
Total	1,543,479	1,434,167	109,312	7.6

Selling and administrative expenses increased by Ch\$ 109.3 billion, or 7.6%, in 2014, mainly due to higher charges for depreciation and impairment of Ch\$ 21.2 billion in the generation business in Chile, which includes Ch\$ 12.6 billion of impairment losses with respect to the Punta Alcalde project. On January 29, 2015, we halted development of the power plant and the related transmission project, in light of the changes requested by the Chilean Court, which may require major modifications to the approved RCA in order to make the project economically and technologically more sustainable (see "Item 4. Information on the Company – D. Property, Plant and Equipment – Projects Under Development – Generation Business – Chile. Punta Alcalde Thermoelectric Power Plant."). Selling and administrative expenses were also affected by higher personnel expenses of Ch\$ 15.7 billion in Edesur and of Ch\$ 4.8 billion in Costanera, resulting from wage increases in 2014, higher charges for depreciation and impairment of Ch\$ 12.3 billion and higher other fixed expenses of Ch\$ 11.8 billion in Codensa.

Operating Income

The following table summarizes operating income by company for the years ended December 31, 2014 and 2013.

	Year ended December 31,

Share of the profit (loss) of associates accounted for using the equity				
method	(51,793)	25,289	(77,082)	(304.8)
Total	19,977	44,459	(24,482)	(55.1)
Non-operating results	(243,185)	(123,570)	(119,615)	(96.8)

Financial Result

The net financial result for 2014 was an expense of Ch\$ 263.1 billion. The expense increased Ch\$ 95.1 billion, or 56.6%, in comparison to 2013. This is mainly explained by the following reasons:

We recorded higher financial income of Ch\$ 5.8 billion, mainly due to increased income of Ch\$ 84.5 billion from a debt restructuring agreed between Mitsubishi Corporation ("MC") and our Argentine subsidiary Costanera in October 2014, which resulted in US\$ 107 million in higher financial income, including principal and interest. In accordance with the terms, MC forgave accrued interest of US\$ 66 million as of September 30, 2014. This result was offset by (i) reduced income of Ch\$ 54.6 billion as a result of the updating of the non-amortized assets at the end of the concessions in Ampla and Coelce to their new replacement value, (ii) lower income from time deposits and other financial instruments of Ch\$ 11.6 billion, (iii) lower financial income of Ch\$ 8.5 billion, mainly from customer financing agreements and (iv) reduced income of Ch\$ 4.0 billion in Edesur as a result of lower compensation under resolution 250/2013 (Costs Monitoring Mechanism or "MMC" in its Spanish acronym), compared to 2013.

We booked higher financial costs of Ch\$ 103.5 billion, mainly due to (i) an increase of Ch\$ 68.7 billion as a result of the adjustment of the non-amortized assets at the end of the concessions in Ampla and Coelce to their new replacement values, (ii) Ch\$ 26.9 billion relating to interest on loans and bonds and (iii) Ch\$ 8.9 billion in higher financial provisions.

There was a smaller charge for indexation adjustments of Ch\$ 11.0 billion, mainly the updating of recoverable taxes and the positive variation of the financial derivatives asset position over the UF.

We recorded increased charges for foreign currency exchange differences of Ch\$ 8.4 billion, as a result of an increase in local exchange rate against the US dollar, mainly in Chile and Argentina that affects the valuation of financial debt and derivative instruments.

Result of Assets Sales

Gains from non-current assets not held for sale increased by Ch\$ 52.6 billion, mainly due to the recognition of the gain on remeasurement of the initial pre-existing participation of 50% in GasAtacama Holding and the realization of the exchange differences of Ch\$ 42.5 billion and the gain on the sale of Los Maitenes and Aguas Santiago Poniente (Enea Project in former Manso de Velasco) for Ch\$ 21.1 billion, partially offset by reduced sales of investment properties and transmission lines of Ch\$ 11.0 billion.

Results of Associates

The share of profits of associates accounted for using the equity method decreased by Ch\$ 77.1 billion, mainly as a result of the impairment in the HidroAysén project of Ch\$ 69.1 billion due to Endesa Chile's decision not to proceed with this project. This decision was based on the uncertainty of recovering the investment made in the project, mainly as a consequence of the long judicial process in order to obtain environmental approvals. For further details, please see "Item 4. Information on the Company – D. Property, Plant and Equipment – Projects Under Development – Generation Business – Chile. HidroAysén Hydroelectric Project." The share of profits of associates accounted for using the equity method also decreased Ch\$13.9 billion as a result of consolidation of GasAtacama Holding. Such decreases were partially offset by an increase of Ch\$4.4 billion relating to Electrogas.

As a result of all the foregoing, total non-operating results for 2014 amounted to an expense of Ch\$ 243.2 billion.

Corporate Income Tax

Corporate income tax increased Ch\$ 54.5 billion, mainly due to (i) increased charges of Ch\$ 62.0 billion resulting from the recognition of net deferred tax liabilities of the Chilean companies mainly following the tax reform enacted in Chile on September 29, 2014, which establishes a gradual increase in the taxation rate, (ii) the consolidation of GasAtacama for Ch\$ 10.2 billion and (iii) an increase of Ch\$ 6.9 billion in Codensa due to higher net income. This was compensated by the positive recognition of net deferred tax assets in the Peruvian companies for Ch\$ 24.8 billion following the application of Law 30,296 which establishes gradual reductions in the tax rate from 2015. For more information see Note 34 of the Notes to our consolidated financial statements and "Item 10. Additional Information —E. Taxation — Chilean Tax Considerations."

Net Income

The following table sets forth our consolidated net income before tax, income tax and net income for the periods indicated.

	Year ended December 31,			
	2014	2013	Change	Change
	(ir	n <mark>millions of C</mark> h	\$)	(in %)
Operating income	1,769,325	1,741,138	28,187	1.6
Non-operating results	(243,185)	(123,570)	(119,615)	96.8

Fortaleza (Brazil)	3,262	2,947	315	10.7
Emgesa (Colombia)	16,090	16,304	(214)	(1.3)
Edegel (Peru)	8,903	9,587	(684)	(7.1)
EEPSA (Peru)	594	_	594	n.a.
Total	69,369	65,912	3,457	5.2

Distribution Business

Distribution revenues are mainly derived from the resale of electricity purchased from generators. Revenues associated with distribution include the recovery of the cost of electricity purchased and the resulting revenue from the VAD, which is associated with the recovery of costs and the return on the investment with respect to the distribution assets, plus the physical energy losses permitted by the regulator. Other revenues derived from our distribution services consist of charges for new connections and the maintenance and rental of meters, among others.

The following table sets forth the electricity sales of our subsidiaries, by country, and their corresponding variations for the years ended December 31, 2013 and 2012.

	Electricity sales during the year ended December 31			ember 31,
	2013	2012	Change	Change

Generation and Transmission Business: Revenues

Lower revenues in Chile of Ch\$ 149.1 billion during 2013 were mainly due to an 11.5% reduction in average energy sales prices, mostly explained by fewer contracts indexed to the marginal cost, coupled with a 2.3% reduction of physical energy sales, mainly to unregulated customers. The lower revenues are explained by a Ch\$ 134.7 billion sales decrease and two non recurring sources of gains that we recorded in 2012. In March 2012, extraordinary income of Ch\$ 29.2 billion was due to an agreement reached between Endesa Chile and CMPC, a pulp and paper company. In December 2012, extraordinary additional income of Ch\$ 55.1 billion was recorded due to an insurance settlement for loss of profits in connection with Bocamina as a result of earthquake damage on February 27, 2010. All these revenues reductions were partially offset by Ch\$ 25.2 billion higher gas sale revenues and Ch\$ 23.8 billion higher other sale revenues.

Revenues from operations in Argentina decreased 49.4% or Ch\$ 170 billion. Costanera recorded Ch\$ 207 billion lower revenue for one-time adjustment due to Argentine Resolution 95. This amount was related to fuel value and was deducted from both revenues and operating costs, with no impact on operating income. El Chocón recorded a 25.4% reduction in operating revenues, primarily related to the exchange rate conversion effect, a decline in average sales price, and lower hydrology. The lower revenues were partially offset by Ch\$ 33.1 billion in revenues related to Costanera's combined-cycle availability contract executed with the Secretary of Energy. Dock Sud and Cemsa added Ch\$ 41.2 billion and Ch\$ 1.6 billion to Enersis' consolidated revenues. Dock Sud and Cemsa have been consolidated by Enersis since April 2013, following the 2013 capital increase. The "currency translation effect" is the net effect obtained when translating the results from the local currency of each country to pesos. The currency translation effect of converting the statement of comprehensive income from the Argentine peso to the Chilean peso in Argentina led to a 15.4% decrease in 2013, when compared to 2012.

In May 2014, the Argentine Secretary of Energy adopted Resolution 529, which superseded Resolution SE 95/2013. Resolution 529 applies retroactively to February 2014. This has led to greater payments by CAMMESA in 2014 for our Argentine subsidiaries. As a result of Resolution 529, there is now greater stability and better earnings and cash flow quality in the electricity industry in Argentina, including more predictable financial results for our Argentine subsidiaries. However, the future effect of this regulation will depend on remuneration values being constantly updated by the Argentine Secretary of Energy according to market conditions, which is currently not the case.

Resolution 95 and Resolution 529 established new remuneration schemes based on the average costs for generation companies, in contrast with the previous marginal price payment system. The new remuneration establishes payments for fixed and variable costs depending on the type of technology (hydro or thermal plants), on the size of plants (small, medium or large units), and on the type of fuel (natural gas, fuel oil/gas oil, biofuel, coal).

Generation companies received the payments defined by Resolution 95 between February 2013 and January 2014. One of the consequences of Resolution 95 is that CAMMESA, the market operator, became the fuel provider for generation companies. Therefore, generation companies did not pay for fuel, reducing their operating costs, but also, they were not compensated for this expense, also reducing part of their revenues. For Costanera, this caused a one-time adjustment of Ch\$ 207 billion, which reduced both revenues and operating costs, with no effect on 2013 operating income. As a result of these resolutions, the method employed to record revenues and operating costs changed.

In Brazil, revenues from Cachoeira Dourada decreased 24.3% in 2013, as a result of a 780.1 GWh decrease in electricity sales, to 3,564.4 GWh, and 7.8% lower average sales prices in terms of Chilean pesos. This decrease in sales was primarily due to lower energy generation, which in turn was attributable to poor hydrological conditions. Revenues from Fortaleza increased 21.3% in 2013, due to 9.6% higher average sales prices in terms of Chilean pesos and 315.5 GWh greater electricity sales that were possible mainly due to the higher thermal generation. Revenues for CIEN decreased 6.7% in 2013 due to the effect of the exchange from Brazilian reais to Chilean pesos following the devaluation of the Brazilian reais. The effect of translating the statement of comprehensive income from Brazilian reais to Chilean pesos in both periods resulted in a 7.8% reduction in Chilean peso terms in 2013 compared to 2012.

In Colombia, revenues from Emgesa increased Ch\$ 59.4 billion, or 10.2%, in 2013, mainly due to a 11.7 % rise in the average energy sales price in terms of Chilean pesos, offsetting a 1.3% decline in physical sales. The effect of translating the statement of comprehensive income from Colombian pesos to Chilean pesos in both periods resulted in a 2.0% decline in Chilean peso terms in 2013 when compared to 2012.

Revenues from Edegel, in Peru, increased Ch\$ 1.7 billion, or 0.6%, in 2013, primarily due to the compensation claim recognition from the TG-7 turbine damage at the Santa Rosa plant of Ch\$ 20.0 billion. Revenues from EEPSA added Ch\$ 33.8 billion to the consolidated income statement. EEPSA has been consolidated by Enersis only since April 2013, following the 2013 capital increase. The currency translation effect of converting the statement of comprehensive income from soles to the peso for both periods resulted in a 0.5% decrease in 2013, when compared to 2012.

Distribution Business: Revenues

In Chile, revenues from our subsidiary Chilectra declined Ch\$ 9.7 billion, or 1.0%, in 2013, as a consequence of a 6.1% reduction in the average energy sales price due to a 4.5% tariff decrease in 2013 with retroactive application to November 2012, partly offset by 707 GWh higher electricity sales, for a total of 15,152 GWh, particularly due to greater residential demand. In addition, other operating income increased Ch\$ 7.8 billion, primarily due to higher energy transmission, higher indemnity received from third parties, and other services. Customers increased by 34,552, reaching 1.7 million. Electricity demand grew by 4.7% in our concession area during the period, explained by increased consumption during the winter due to lower temperatures and higher commercial activity.

In Argentina, revenues from Edesur increased by Ch\$ 207.4 billion or 64.6% in 2013, mainly due to the application of Resolution 250/13. This resolution (in addition to Energy Secretary Note 6852/13, which recognized costs not transferred to tariffs from 2007 through September 2013 in connection with the application of MMC, the cost monitoring mechanism) resulted in the non-recurring recognition of a Ch\$ 250.5 billion increase in revenues in 2013. This effect was partially offset by a Ch\$ 40.8 billion reduction in sales revenues, due to the recognition of Ch\$ 21.6 billion in fines for service quality and the negative effect (15.4% less) of the exchanging Argentine pesos to Chilean pesos. Electricity sales reached 18,137 GWh, an increase of 2.2% over 2012, due to the increased demand at the end of 2013 linked to the high temperatures in Buenos Aires. The number of customers increased by 55,338, reaching more than 2.4 million customers.

In Brazil, revenues from Ampla decreased Ch\$ 129.1 billion, or 12.0%, in 2013. This reduction is associated with the Extraordinary Tariff Adjustment (RTE) under Law 12,783/13, which reduced tariffs in the country by 20% on average. This effect was partially offset by the Annual Tariff Adjustment, which rates increased by 12.1 % on average. Ampla added 89,000 new customers, reaching more than 2.8 million customers. Electricity demand grew by 1.5% in our concession area during the period, explained by higher temperatures compared to 2012, which triggered greater use of air conditioning units by residential and commercial customers.

Revenues from Coelce fell by Ch\$ 117.5 billion, or 14.6 %, in 2013. This reduction is associated with the Extraordinary Tariff Adjustment (RTE) under Law 12,783/13, which reduced tariffs in the country by 20% on average, and the return of an extraordinary income between April 2011 and March 2012, because of the non-application of the third tariff revision cycle of Coelce in April 2011. The refund to end customers will be through tariff adjustments in 2014. These effects were partially offset by the Annual Tariff Adjustment, which increased rates by 3.9% on average. Physical sales increased by 8.5%, reaching 10,718 GWh, explained by the more intensive use of pumping devices in rural areas, linked to the drought that affected the country during the period. The company added 162,035 new customers, reaching a total of more than 3.5 million customers.

In Colombia, revenues from our subsidiary Codensa remained flat, increasing by 0.1% in 2013, mainly due to the exchange rate effect that offset the increase of revenues due to a 2.9% increase in physical sales. Electricity sales reached 13,342 GWh to and the number of customers increased by 99,071, to more than 2.6 million customers. Electricity demand remained stable, growing 1.0% in our concession area during the period.

In Peru, revenues from Edelnor increased by 7.5% in 2013, mainly due to higher physical sales of 2.7% and revenues linked to other services. The number of customers grew by 51,577, to more than 1.2 million, and electricity sales reached 7,045 GWh. Electricity demand grew by 2.7% in our concession area during the period. The rest of the country showed a higher demand, primarily linked to the mining sector, based in central and northern Peru.

Operating Costs

Operating costs consist primarily of electricity purchases from third parties, fuel purchases, depreciation, amortization and impairment losses, maintenance costs, tolls paid to transmission companies, and employee salaries. Operating costs also include administrative and selling expenses. The following table shows the breakdown of our operating costs, as a percentage of total operating costs, for the years ended December 31, 2013 and 2012. Our cost structure remained substantially the same in 2013 and 2012.

	Year ended December 31,		
	2013	2012	
Operating Costs as a Percentage of Total Operating Costs	(in %)	
Electricity purchases	40.2	36.8	
Fuel purchases	8.5	15.2	
Other variable cost	10.8	12.1	
Other fixed costs	11.5	9.8	
Depreciation, amortization and impairment losses	11.3	9.5	
Transmission tolls	8.8	9.4	
Staff benefit costs	8.9	7.2	
Total	100	100	

The table below sets forth the breakdown of operating costs by company for the years ended December 31, 2013 and 2012:

	Year ended December 31,			
	2013	2012	Change	Change
	(in	millions of Ch\$	<u>)</u>	(in %)
Generation and Transmission Business				
Endesa and subsidiaries (Chile)	690,421	939,246	(248,825)	(26.5)
Costanera (Argentina)	73,744	317,228	(243,484)	(76.8)

Total	4,523,308	5,025,190	(501,882)	(10.0)

Generation and Transmission Business: Operating Costs

In Chile, Endesa Chile's operating costs decreased by Ch\$ 248.8 billion, or 26.5%, in 2013, primarily because of lower fuel costs of Ch\$ 173.7 billion, lower energy purchase costs of Ch\$ 94.9 billion as a result of reduced energy sales needs, lower average price of purchased energy in the spot market, reduced transportation expenses of Ch\$ 3.8 billion, and a reduction in depreciation and impairment losses of Ch\$ 3.1 billion. These cost reductions were partly offset by higher other variable procurements and services of Ch\$ 13.4 billion, higher personnel expenses of Ch\$ 9.9 billion and higher other fixed costs of Ch\$ 8.3 billion.

In Argentina, Costanera's operating costs decreased by Ch\$ 243.5 billion, or 76.8%, in 2013, mainly due to the reclassification of revenues and costs resulting from the application of Resolution 95/13, which associates revenues and costs to fuel costs with a one-time adjustment of Ch\$ 207 billion as of December 31, 2013, also recorded as operating revenues, with no effect on operating income. In addition, a Ch\$ 3.0 billion transportation cost decrease, a Ch\$ 1.5 billion decrease in other fixed expenses and reduced charges for depreciation and impairment of Ch\$ 1.5 billion were registered. All of these were partly offset by higher personnel expenses of Ch\$ 3.3 billion and higher energy purchases of Ch\$ 3.1 billion. Operating costs of El Chocón decreased 7.7% due to a Ch\$ 1.9 billion decrease in procurement and services costs, and reduced energy purchases of Ch\$ 0.9 billion. This was partially offset by higher transportation expenses of Ch\$ 1.0 billion. Operating costs of Dock Sud and Cemsa contributed to consolidated operating costs Ch\$ 43.7 billion and Ch\$ 2.0 billion, respectively. Both companies have been consolidated by Enersis since April 2013, following the 2013 capital increase.

In Brazil, Cachoeira Dourada's operating costs declined 28.8%, or Ch\$ 14.4 billion, to Ch\$ 35.6 billion in 2013, mainly due to reductions in transportation expenses of Ch\$ 5.6 billion, other variable procurement and service costs of Ch\$ 4.7 billion and lower energy purchases of Ch\$ 4.5 billion. Fortaleza's operating costs increased by Ch\$ 22.5 billion in 2013, mainly due to greater fuel consumption of Ch\$19.8 billion, increased energy purchases and transportation expenses of Ch\$ 4.3 billion, and higher other variable costs of Ch\$ 1 billion. These increases were partially offset by reduced fixed costs of Ch\$ 2.4 billion. CIEN's operating costs decreased 1.2%, totaling Ch\$ 35.2 billion, in 2013. This is mainly explained by reduced sales revenues of Ch\$ 4.8 billion and reduced operating expenses of Ch\$ 424 million. Both variations are due to the effect of converting Brazilian reais to Chilean pesos.

In Colombia, Emgesa's operating costs increased Ch\$ 33.0 billion, or 13.6%, in 2013. This was explained by a Ch\$ 38.5 billion increase in energy purchases due to a higher purchase price in the spot market related to the worsening of hydrological conditions in the first quarter of 2013, coupled with higher physical energy purchases due to the lower hydro generation. Also, transportation expenses increased by Ch\$ 2.4 billion and personnel expenses increased by Ch\$ 1.5 billion. These increases were partially offset by reductions of Ch\$ 6.2 billion in variable procurement expenses, Ch\$ 1.4 billion in fuel costs, Ch\$ 0.9 billion in other fixed expenses and Ch\$ 0.9 billion in depreciation and impairment charges.

In Peru, Edegel's operating costs decreased by Ch\$ 9.6 billion, or 5.3%, in 2013 because of the 684 GWh decrease in physical sales that were reflected in reduced energy purchases of Ch\$ 18.7 billion and reduced fuel consumption of Ch\$ 3.3 billion. These reductions were partially compensated by higher depreciation and impairment costs of Ch\$ 6.2 billion and higher variable procurements and service costs of Ch\$ 5.8 billion. Energy generation fell by 2.1% to 8,391.1 GWh in 2013, partially related to the TG-7 turbine damage at the Santa Rosa plant. Operating costs of EEPSA contributed to the consolidated operating costs Ch\$ 26.5 billion. EEPSA has been consolidated by Enersis only since April 2013, following the 2013 capital increase.

Distribution Business: Operating Costs

Chilectra's operating costs decreased Ch\$ 15.2 billion, or 1.8%, in 2013. This is due to Ch\$ 14.4 billion reduced energy purchase expenses, Ch\$ 1.7 billion lower transportation expenses, and lower other fixed costs of Ch\$ 2.0 billion. This was offset by Ch\$ 1.5 billion higher depreciation and impairment costs, Ch\$ 0.9 billion higher personnel expenses, and Ch\$ 0.6 billion higher other expenses. Energy losses declined by 0.1 percentage points to 5.3% in 2013.

Edesur's operating costs increased Ch\$ 31.3 billion, or 8.3%, in 2013, due to an increase in personnel expenses of Ch\$ 19.2 billion and an Ch\$ 18.6 billion increase in other fixed expenses for supplies and contracted services, which have had general price increases. These were partially offset by Ch\$ 6.2 billion in lower energy purchase costs. Energy losses rose by 0.2 percentage points to 10.8%.

In Brazil, Ampla's operating costs decreased by Ch\$ 127.6 billion, or 14.2%, in 2013. This is mainly due to Ch\$ 99.7 billion lower other variable procurement costs and Ch\$ 43.7 billion in reduced transportation costs. This was offset by Ch\$ 9.5 billion higher energy purchase costs, explained by the drought affecting Brazil, together with the application of MP579 during 2013, as distributors were more exposed to the spot market. These extra costs could not be immediately compensated through a regulatory mechanism and are expected to be recovered in the future, according to Brazilian regulation. Depreciation and impairment cost increased by Ch\$ 7.3 billion, while personnel expenses declined by Ch\$ 2.6 billion. Energy losses increased by 0.2 percentage points from 19.6% to 19.8%. Coelce's operating costs decreased by Ch\$ 47.9 billion, or 7.1%, in 2013. This was explained by a Ch\$ 53.4 billion reduction in procurement and service costs, including a Ch\$ 20.5 billion reduction in transportation costs and a Ch\$ 8.2 billion increase in energy purchase costs, explained by the drought and the application of MP579. Depreciation and impairment cost increased by Ch\$ 13.3 billion, fixed costs declined by Ch\$ 4.4 billion, and personnel expenses decreased by Ch\$ 3.3 billion. Energy losses declined by 0.1 percentage points to 12.5%. Codensa's operating costs decreased 0.2%, in 2013. Energy losses dropped significantly 0.3 percentage points to 7.0%, due to efforts undertaken by the company to mitigate this effect.

Edelnor's operating costs increased by Ch\$ 14.9 billion, or 4.7%, in 2013, mainly due to a Ch\$13.4 billion increase in energy purchase costs and a Ch\$ 1.1 billion increase in other variable costs. There were also higher personnel expenses of Ch\$ 1.5 billion and lower fixed costs of Ch\$ 1.1 billion. Energy losses were lower by 0.2 percentage points to 8.0% in 2013.

Operating Income

The following table summarizes operating income by company for the years ended December 31, 2013 and 2012.

	Year ended December 31,			
	2013	2012	Change	Change
	(in	millions of Ch\$)	(in %)
Generation and Transmission Business				
Endesa Chile and subsidiaries (Chile)	265,281	165,530	99,751	60.3

Total	819,488	692,834	126,654	18.3
Less: consolidation adjustments and non-core activities	(22,845)	(12,863)	(9,982)	77.7
Total	1,741,138	1,470,763	270,375	18.4

Non-Operating Results

The following table shows the non-operating results for the years ended December 31, 2013 and 2012.

	Year ended December 31,			
	2013	2012	Change	Change
	(in	millions of Ch\$)		(in %)
Financial result				
Financial income	260,127	232,130	27,997	12.1
Financial costs	(388,368)	(419,889)	31,521	7.5
Gain (loss) for indexed assets and liabilities	(9,415)	(12,757)	3,342	26.2
Net foreign currency exchange differences	(30,373)	(16,126)	(14,247)	(88.3)
Total	(168,029)	(216,642)	48,613	22.4
Other non-operating results				
Total gain (loss) on sale of non-current assets not held for sale	19,170	15,186	3,984	26.2
Share of the profit (loss) of associates accounted for using the equity				
method	25,289	30,382	(5,093)	(16.8)
Total	44,459	45,568	(1,109)	(2.4)
Non-operating results	(123,570)	(171,074)	47,504	27.8

Financial Result

The net financial result was a loss of Ch\$ 168.0 billion, an improvement of Ch\$ 48.6 billion, or 22.4%, with respect to 2012.

We recorded higher financial income of Ch\$ 28.0 billion, mainly due to (i) Ch\$ 37.6 billion higher investment income from the proceeds of our 2013 capital increase, (ii) Ch\$ 27.9 billion higher Edesur income due to the effects of the implementation of Resolution 250/2013 and (iii) Ch\$ 17.7 billion higher income in Ampla due to a correction of recoverable taxes. These effects were partially offset by a (i) lower valuation of the future concession termination value for Ampla and Coelce, which resulted in lower income from financing agreements due 2026 of Ch\$ 50.5 billion and due 2028 of Ch\$ 2.7 billion, respectively and (ii) a Ch\$ 2.0 billion decrease in other income.

We recorded lower financial costs of Ch\$ 31.5 billion, mainly the result of a Ch\$ 25.7 billion decrease in financial costs of bank loans and bonds and a Ch\$ 6.1 billion decrease on the interest of the contingencies.

We recorded a lower loss for indexed assets and liabilities of Ch\$ 3.3 billion due to the effect produced by variations in the value of the UF with respect to UF denominated debt of Chilean companies. This is because the UF increased in value by 2.1% in 2013 compared with the 2.5% increase in 2012.

We recorded a higher charge for net foreign currency exchange differences of Ch\$ 14.3 billion, mainly due to gains derived from variations in exchange rates, on cash and cash equivalents of Ch\$ 2.5 billion, accounts receivable, financial assets, and other receivables in U.S. dollars of Ch\$ 43.2 billion and losses on U.S. dollar liabilities of Ch\$ 59.9 billion.

Result of Asset Sales

Gains from non-current assets not held for sale increased Ch\$ 4.0 billion, due to profits obtained from transmission line sales of Ch\$ 2.5 billion, sale of land of Ch\$ 0.6 billion and other sales of Ch\$ 0.8 billion.

Corporate Income Tax

Corporate income tax increased Ch\$ 97.5 billion, mainly due to Ch\$ 74.3 billion of higher taxes in Enersis, Ch\$ 51.4 billion in Endesa Chile, Ch\$ 13.6 billion in Edesur, Ch\$ 8.9 billion in Emgesa, Ch\$ 7.1 billion in Inversiones Sudamérica, Ch\$ 6.6 billion in Chilectra, Ch\$ 5.5 billion in Codensa, Ch\$ 5.0 billion in Celta, Ch\$ 1.6 billion in Dock Sud, and Ch\$1.1 billion in EEPSA. This was partially compensated by a Ch\$ 43.4 million reduction in taxes in Pehuenche and a Ch\$ 33.7 billion reduction in Coelce. For further detail please see Note 33 to our consolidated financial statements.

Net Income

The following table sets forth our consolidated net income before tax, income tax, and net income for the periods indicated.

	Year ended December 31,				
	2013	2012	Change	Change	
	(ir	n millions of Ch\$)	(in %)	
Operating income	1,741,138	1,470,763	270,375	18.4	
Non-operating results	(123,570)	(171,074)	47,504	(27.8)	
Net income before taxes	1,617,568	1,299,689	317,879	24.5	
Income tax	(504,167)	(406,676)	(97,491)	24.0	
Net income	1,113,401	893,013	220,388	24.7	
Net income attributable to: shareholders of Enersis	658,514	377,351	281,163	74.5	
Net income attributable to: Non-controlling interests	454,887	515,662	(60,775)	(11.8)	

For a breakdown of the net income by country, see Note 33.2 of the Notes to our consolidated financial statements.

B. Liquidity and Capital Resources.

We are a company with no significant assets other than the stock of our subsidiaries. The following discussion of cash sources and uses reflects the key drivers of our cash flow.

We, on a stand-alone basis, receive cash inflows from our subsidiaries, as well as from related companies in Chile and abroad. Foreign subsidiaries and associates' cash flows may not be available to satisfy our own liquidity needs, mainly because they are not wholly-owned, and because there is a time lag before we have effective access to those funds through dividends or capital reductions. However, we believe that cash flow generated from our business operations, as well as cash balances, borrowings from commercial banks, and ample access to both Chilean and foreign capital markets will be sufficient to satisfy all our needs for working capital, debt service, dividends and routine capital expenditures in the foreseeable future.

In March 2013, we completed a Ch\$ 2,846 billion (US\$ 6.0 billion) capital increase, pursuant to which our minority shareholders contributed approximately Ch\$ 1,121billion (US\$ 2.4 billion) in cash and Endesa Spain contributed in-kind with assets worth Ch\$ 1,700 billion (US\$ 3.6 billion) (see "Item 4 — A. History and development of the company").

Set forth below is a summary of our consolidated cash flow information for the years ended December 31, 2014, 2013 and 2012.

	Year ended December 31,		
	2014	2013	2012
	(in bi	ll <mark>ions of C</mark> h	\$)
Net cash flows from (used in) operating activities	1,698	1,701	1,543
Net cash flows from (used in) investing activities	(300)	(1,224)	(842)
Net cash flows from (used in) financing activities	(1,283)	337	(1,012)
Net increase (decrease) in cash and cash equivalents before effect of exchange rates changes	115	814	(311)
Effects of exchange rate changes on cash and cash equivalents	(17)	(24)	(61)
Cash and cash equivalents at beginning of period	1,606	816	1,188
Cash and cash equivalents at end of period	1,705	1,606	816

For the year ended December 31, 2014, net cash flow from operating activities was Ch\$ 1,698 billion, a decrease of Ch\$ 3 billion, or 0.2%, compared to 2013, primarily as a consequence of an increase in payments to suppliers for goods and services of Ch\$ 705 billion, an increase in other payments for operating activities of Ch\$ 242 billion, a decrease in collections from insurance policies and services, annual payments, and other benefits from policies held of Ch\$ 54 billion mainly in Chile, an increase in income tax payments of Ch\$ 47 billion, mainly in Chile, Brazil and Peru, a decrease in collections from royalties, payments, commissions, and other income from operating activities of Ch\$ 39 billion, mainly in Colombia, an increase in payments to and on behalf of employees of Ch\$ 34 billion, mainly in Chile, Brazil and Colombia, all of which were partially offset by the increase in collections from the sale of goods and services of Ch\$ 840 billion mainly in Chile, Peru and Colombia, and the increase in other collections from operating activities of Ch\$ 290 billion.

For the year ended December 31, 2013, net cash flow from operating activities was Ch\$ 1,701 billion, an increase of Ch\$ 158 billion, or 10.2%, compared to 2012, primarily as a consequence of a decrease in payments to suppliers for goods and services of Ch\$ 208 billion, a decrease in other payments for operating activities of Ch\$ 175 billion, an increase in other collections from operating activities of Ch\$ 125 billion, a Ch\$ 71 billion decrease in income tax payments, mainly in Chile and Brazil, and an increase in collections from premiums and services, annual payments, and other benefits from policies held of Ch\$ 68 billion, all of which were partially offset by the decrease in collections from the sale of goods and services of Ch\$ 476 billion, mainly in Chile and Brazil and a Ch\$ 48 billion increase in payments to and on behalf of employees, mainly in Chile and Argentina.

For the year ended December 31, 2014, net cash used in investing activities was Ch\$ 300 billion, mostly explained by investments in time deposits with a maturity greater than 90 days for Ch\$ 646 billion, the acquisition of fixed assets totaling Ch\$ 826 billion (see "Item 4. Information of the Company — A. History and Development of the Company — Investment, Capital Expenditures and Divestitures"), incorporation of intangible assets (under IFRIC 12) for Ch\$ 261 billion, the consolidation of GasAtacama, after the purchase of an additional 50% participation, for Ch\$ 38 billion, all of which was partially offset by interest received of Ch\$ 93 billion, loss of control of subsidiaries for Ch\$ 41 billion, due to the sale of all the shareholding in Maitenes and Aguas Santiago Poniente, and other inflows for Ch\$ 44 billion.

For the year ended December 31, 2013, net cash used in investing activities was Ch\$ 1,224 billion, mostly explained by investments in time deposits with a maturity greater than 90 days for Ch\$ 562 billion, mainly at Enersis on a stand-alone basis, the acquisition of fixed assets totaling Ch\$ 603 billion, and the incorporation of intangible assets (under IFRIC 12) for Ch\$ 169 billion, all of which was partially offset by interest received of Ch\$ 92 billion, other cash inflows of Ch\$ 14 billion and dividends received classified as investment cash flow of Ch\$ 9 billion.

For the year ended on December 31, 2014, net cash used in financing activities was Ch\$ 1,283 billion. The main drivers of this change are described below.

The aggregate cash inflows from financings were primarily due to:

- Ch\$ 222 billion in bond issuances carried out by Endesa Chile.
- Ch\$ 165 billion in bond issuances by Emgesa.
- Ch\$ 118 billion in loans by Coelce.
- Ch\$ 77 billion in bond issuances by Edelnor.
- Ch\$ 75 billion in bond issuances by Ampla.
- Ch\$ 53 billion in bond issuances by Codensa.
- Ch\$ 28 billion in loans by Edegel.
- Ch\$ 9 billion in capital increase by Dock Sud.

The aggregate cash outflows were primarily due to:

- Ch\$ 633 billion in dividend payments (including Ch\$ 332 billion from Enersis on a stand-alone basis, Ch\$ 108 billion from
 Emgesa, excluding dividends paid to us, and Ch\$ 71 billion from Endesa Chile on a stand-alone basis, excluding dividends
 paid to us, among others).
- Ch\$ 385 billion in purchases of minority shareholdings (Coelce for Ch\$134 billion and Edegel for Ch\$251 billion).
- Ch\$ 247 billion of interest expense (including Ch\$ 63 billion in Endesa Chile on a stand-alone basis, Ch\$ 66 billion in Emgesa among others).
- Ch\$ 210 billion on payments of loans, bonds and other financial instruments from Endesa Chile on a consolidated basis.
- Ch\$ 187 billion on payments of loans and bonds in Enersis on a stand-alone basis.
- Ch\$ 100 billion on payments of loans and bonds in Enel Brasil on a consolidated basis.
- Ch\$ 87 billion on payments of loans and bonds by Codensa.
- Ch\$ 34 billion on payments of loans, bonds and other financial instruments in Edelnor.

For the year ended on December 31, 2013, net cash generated from financing activities was Ch\$ 337 billion. The main drivers of this change are described below.

The aggregate cash inflows were primarily due to:

- Ch\$ 120 billion in loans by Ampla.
- Ch\$ 46 billion in loans by Coelce.
- Ch\$ 149 billion in bond issuances by Emgesa.
- Ch\$ 99 billion in bond issuances by Codensa.
- Ch\$ 62 billion in bond issuances and Ch\$ 13 billion in loans by Edelnor.
- Ch\$ 11 billion in capital increases by Costanera.
- Ch\$ 20 billion in loans by El Chocón.
- Ch\$ 1,121 billion in capital increase by Enersis (cash portion only).

The aggregate cash outflows were primarily due to:

- Ch\$ 482 billion in dividend payments (including Ch\$ 188 billion from Enersis and Ch\$ 47 billion from Endesa Chile on a stand-alone basis, among others).
- Ch\$ 231 billion of interest expense (including Ch\$ 71 billion in Endesa Chile on a stand-alone basis and Ch\$ 51 billion in Emgesa among others).
- Ch\$ 152 billion on payments of loans and bonds in Enel Brasil on a consolidated basis.
- Ch\$ 258 billion on payments of loans, bonds and other and other financial instruments from Endesa Chile on a consolidated basis.

For a description of liquidity risks resulting from the inability of our subsidiaries to transfer funds, please see "Item 3. Key Information — D. Risk Factors — We depend in part on payments from our subsidiaries, jointly-controlled entities and associates to meet our payment obligations."

We coordinate the overall financing strategy of our controlled subsidiaries. Our operating subsidiaries independently develop their capital expenditure plans and finance their capital expansion programs through internally generated funds or direct financings. We have no legal obligations or other commitments to financially support our subsidiaries. In addition, and as disclosed later in this section, none of our debt agreements nor Endesa Chile's debt agreements include cross default provisions that could be triggered by Argentine or any other foreign subsidiary defaults. Only defaults by certain Chilean subsidiaries could trigger a cross default for us. Chilean subsidiaries are financed by us through intercompany loans. For information regarding our commitments for capital expenditures, see "Item 4. Information on the Company — A. History and Development of the Company — Investments, Capital Expenditures and Divestitures" and our contractual obligations table set forth below.

Having stated our corporate policy in connection with the financial autonomy that we expect from our subsidiaries, we have in the recent past, and to a very limited extent, provided financial support in Argentina in the form of intercompany loans and capital contributions in which debt was capitalized. We have also guaranteed a loan with a third party for an immaterial amount. Most of the loans have been provided by our investment vehicle, Endesa Argentina S.A., using local funds such as dividends from other Argentine subsidiaries.

Additionally, information about Endesa Chile's participation in Costanera's 2013 capital increase can be found later in this section, and information on structured loans from Endesa Chile to Costanera can be found in "Item 7—Major Shareholders and Related Party Transactions — B. Related Party Transactions."

We believe that the level of such financial support is insignificant in the context of our consolidated financial statements taken as a whole. The fundamental drivers of such limited support are recent regulatory changes implemented by Argentine authorities and our expectation that our Argentine long-lived assets will eventually be appropriately recovered by free cash flows arising from new and more favorable electricity sector regulations.

To the extent there may be positive market signals regarding regulatory improvements which allow us to forecast favorable effects on our Argentine subsidiaries' operating results, we may continue to evaluate additional, temporary and exceptional financial support (primarily in the form of intercompany loans) on a case by case basis, as described in this context.

We have accessed the international equity capital markets (including several SEC-registered ADS issuances) in 1993, 1996, 2000, 2003 and 2013, and in 1994 for Endesa Chile. We have also issued bonds in the United States ("Yankee Bonds") for both Enersis and Endesa Chile. Since 1996, we, Endesa Chile and its subsidiary Pehuenche have issued a total of US\$ 3,920 million in Yankee Bonds.

The following table lists the Yankee Bonds issued by us and Endesa Chile outstanding as of December 31, 2014. The weighted average annual coupon interest rate for such bonds is 6.6%, without giving effect to each bond's duration, or put options.

			Aggregate Principal Amount

Total			1,591

(1) Many of the coupon rates are variable rates based on local indexes, such as inflation. The table reflects the coupon rate taking into account each local index as of December 31, 2014.

We frequently participate in the international commercial bank markets governed by the laws of the State of New York through syndicated senior unsecured loans. As of December 31, 2014, the amount outstanding or available for this bank loans is listed below:

Borrower	Type	Maturity	Facility Amount	Amount Drawn
			(in millions of	(in millions of
			US\$)	US\$)
Endesa Chile	Syndicated revolving loan	July 2019	200	

The Endesa Chile revolving credit facility due July 2019 does not contain a condition precedent requirement regarding the non-occurrence of a "Material Adverse Effect" (or MAE, as defined contractually) prior to a disbursement, allowing us full flexibility to draw on up to US\$ 200 million in the aggregate from such committed revolving facilities under any circumstances, including situations involving a MAE.

We and Endesa Chile also borrow from banks in Chile under fully committed facilities in which a potential MAE would not be an impediment to this source of liquidity. In early 2013, both companies entered into 3-year bilateral revolving loans for an aggregate of UF 4.8 million (Ch\$ 118 billion as of December 31, 2014) as described below.

Borrower	Туре	Maturity	Facility Amount	Amount Drawn
_			(in millions of UF\$)	(in billions of UF\$)
Enersis	Bilateral revolving loan	April 2016	2.4	_
Endesa Chile	Bilateral revolving loan	February 2016	2.4	
Total			4.8	_

Our subsidiaries also have access to fully committed credit lines in the local markets, as detailed below.

Type	Last Maturity	Facility Amount	Amount Drawn
		(in billions of Ch\$)	(in billions of Ch\$)
Bilateral revolving loans	May 2016	50	_
Bilateral revolving loans	September 2016	43	_
Bilateral revolving loans	January 2015	91	_
Bilateral revolving loans	July 2016	46	_
Bilateral revolving loans	November 2016	21	_
		251	_
	Bilateral revolving loans Bilateral revolving loans Bilateral revolving loans Bilateral revolving loans	Bilateral revolving loans January 2015 Bilateral revolving loans July 2016	Bilateral revolving loans May 2016 50 Bilateral revolving loans September 2016 43 Bilateral revolving loans January 2015 91 Bilateral revolving loans July 2016 46 Bilateral revolving loans November 2016 21

As a result of the foregoing, we have access to fully committed undrawn revolving loans, both international and domestic, for up to approximately Ch\$ 491 million in the aggregate as of December 31, 2014 (including one minor credit line in Brazil).

We and Endesa Chile also borrow routinely from uncommitted Chilean bank facilities with approved lines of credit for approximately Ch\$ 183 billion in the aggregate, none of which we currently draw upon. Unlike the committed lines described above, which are not subject to material adverse event condition precedents prior to disbursements, these facilities are not guaranteed under all circumstances. Our subsidiaries also have access to uncommitted local bank facilities, for a total amount of Ch\$ 295 billion, none of which we currently draw upon.

Both we and Endesa Chile may also access the Chilean commercial paper market under programs that have been registered with the Chilean SVS for a maximum of US\$ 200 million for each borrower. In addition, we have a local bond program registered with the SVS for UF 12.5 million (Ch\$ 308 billion as of December 31, 2014), which has not been drawn upon yet. Finally, our foreign subsidiaries also have access to other types of financing, including governmental facilities, supplier credit and leasing, among others.

Except for the SEC-registered Yankee Bonds, which are not subject to financial covenants, our and Endesa Chile's outstanding debt facilities include financial covenants. The types of financial covenants, and their respective limits, vary from one type of debt to another. As of December 31, 2014, the most restrictive financial covenant affecting us was the Indebtedness to EBITDA Ratio covenant, as defined contractually, corresponding to the syndicated bilateral loan facility that matures in April 2016. For Endesa Chile, the most restrictive financial covenant was the Leverage Ratio in connection with the bilateral revolving loan facility that matures in February 2016. Under such covenants, the maximum additional debt that could be incurred without a breach of the most restrictive covenant is Ch\$ 4,165 billion and Ch\$ 2,792 billion for us and Endesa Chile, respectively. As of December 31, 2014 and as of the date of this Report, we and our subsidiaries are in compliance with the financial covenants contained in our debt instruments with the exception of our Argentine subsidiary, El Chocón.

As of December 31, 2014 and March 31, 2015, El Chocón did not meet an interest coverage ratio test (EBITDA to interest expense) pursuant to a covenant requirement under a loan agreement with Standard Bank, Deutsche Bank and Itaú that matures in February 2016. El Chocón has experienced difficulties in meeting this requirement several times in the past and has obtained waivers of compliance from its lenders. As of the date of this Report, we are in discussions with the lenders and El Chocón has not received any waivers or acceleration notices for its most recent failure to comply with the ratio. If the lenders decide to declare an event of default and accelerate the loan, US\$ 15 million of principal and interest would become immediately due and payable under this facility. Because of cross-acceleration provisions of El Chocón's other loans, an additional Ch\$ 21 billion would also be accelerated and El Chocón would be required to enter into bankruptcy.

As is customary for certain credit and capital market debt facilities, a significant portion of our and Endesa Chile's financial indebtedness is subject to cross default provisions. Each of the revolving credit facilities described above, as well as all of our and Endesa Chile's Yankee Bonds, have cross default provisions with different definitions, criteria, materiality thresholds, and applicability as to the subsidiaries that could give rise to a cross default.

The cross default provision for the Endesa Chile revolving credit facilities due in July 2019, governed by the laws of the State of New York, refers to defaults of the borrower, without reference to any subsidiary. Under such credit facilities, only matured defaults exceeding US\$ 50 million qualify for a potential cross default when the principal exceeds US\$ 50 million, or its equivalent in other currencies. In the case of a matured default above the materiality threshold, the revolving credit facility's lenders would have the option to accelerate if lenders representing more than 50% of the aggregate debt of a particular outstanding facility choose to do so. Neither of our local facilities due in April 2016 nor the Endesa Chile local facilities due in February 2016 has cross default provisions to debt other than the respective borrower's own indebtedness.

Cross default provisions of our and Endesa Chile Yankee Bonds may be triggered only by our or Chilean subsidiaries' debt. A matured default of either Enersis, Endesa Chile or one of their respective Chilean subsidiaries could result in a cross default to our and Endesa Chile's Yankee Bonds if such matured default, on an individual basis, has a principal exceeding US\$ 30 million, or its equivalent in other currencies, and in the specific case of the Endesa Chile's Yankee Bond issued in April 2014, maturing in 2024, the threshold is US\$ 50 million, or its equivalent in other currencies. In the case of a matured default above the materiality threshold, Yankee bondholders would have the option to accelerate if either the trustee or bondholders representing no less than 25% of the aggregate debt of a particular series then outstanding choose to do so. A payment default or a bankruptcy/insolvency default outside of Chile has no contractual effect on our Yankee Bond indentures, no matter how material. Likewise, neither our nor Endesa Chile's local bonds have subsidiary cross default provisions.

All of our and Endesa Chile's Yankee Bonds, including those registered with the United States Securities and Exchange Commission, are unsecured and not subject to any guarantees by any of our subsidiaries or parent company.

Our Argentine subsidiary, Costanera, did not make any installment payments due in 2012, 2013 and 2014 under the terms of a 1996 supplier credit agreement with Mitsubishi Corporation ("MC") for a total amount of US\$ 107 million in payments, including principal and interest. After a negotiation process which ended on October 27, 2014, Costanera and MC agreed to refinance the debt under the following summary terms:

- forgiveness of accrued interest under the agreement for US\$ 66 million as of September 30, 2014;
- the rescheduling of US\$ 120.6 million in capital maturities for a period of 18 years, with a grace period of 12 months;
- the debt must be completely paid by December 15, 2032;
- an annual amortization of capital of at least US\$ 3 million, in quarterly installments;
- a 0.25% annual interest rate;
- maintenance of the lien on the combined-cycle power plant at Costanera in favor of MC;
- restrictions to dividend payment; and
- the condition precedent for the rescheduling agreement effectiveness was the payment of US\$ 5 million of capital, carried out on November 14, 2014.

As explained elsewhere in this section, payment defaults and bankruptcy proceedings of non Chilean subsidiaries have no financial effect on our debt obligations.

In addition, Costanera carried out a capital increase in November 2013 that improved its working capital. Its weak financial situation is attributable to its inability to obtain tariff adjustments that reflect its actual generation costs.

With the exception of our Argentine subsidiaries, our companies have access to existing credit lines sufficient to satisfy all of their present working capital needs. Access to the capital markets on the part of our Argentine subsidiaries has been very limited due to the difficult financial situation still prevailing in Argentina (particularly in the utilities sector) since 2002, the poor capital markets environment due to the shortage of off-shore financing, the nationalization of the pension fund system and, in general, higher risk associated with lending to Argentine utilities as a consequence of the regulatory framework. Notwithstanding these unusual circumstances, these subsidiaries were still able to refinance debt maturing in 2014.

Payment of dividends and distributions by our subsidiaries and affiliates represent an important source of funds for us. The payment of dividends and distributions by certain subsidiaries and affiliates are subject to legal restrictions, such as legal reserve requirements, and capital and retained earnings criteria, and other contractual restrictions. Legal counsels in the countries where our subsidiaries and affiliates operate have informed us of the current legal restrictions regarding the payment of dividends or distributions to us in the jurisdictions where such subsidiaries or affiliates are incorporated. We are currently in compliance with the legal

restrictions, and therefore, they currently do not affect the payment of dividends or distributions to us. Certain credit facilities and investment agreements of our subsidiaries restrict the payment of dividends or distributions in certain special circumstances. For instance, one of Endesa Chile's UF-denominated Chilean bonds restricts the amount of intercompany loans that Endesa Chile and its consolidated subsidiaries are allowed to lend to us. The threshold for such restriction of intercompany loans is US\$ 100 million equal to Ch\$ 61 billion. For a description of liquidity risks resulting from our company status, please see "Item 3. Key Information — D. Risk factors —We depend in part on payments from our subsidiaries, jointly-controlled entities and associates to meet our payment obligations."

Our estimated capital expenditures for 2015 through 2019 amount to Ch\$ 5,854 billion, of which Ch\$ 4,855 billion are considered non-discretionary investments. We include maintenance capital expenditures as non-discretionary because it is important for us to maintain the quality and operation standards required for our facilities, but we do have some flexibility regarding the timing for these investments. We consider the investment in expansion projects under execution as non-discretionary expenditures. We consider the remaining Ch\$ 999 billion as discretionary capital expenditures. The latter includes expansion projects that are still under evaluation, in which case we would undertake them only if deemed profitable.

Other than in Argentina, we do not currently anticipate liquidity shortfalls affecting our ability to satisfy the material obligations described in this Report. We expect to be able to refinance our indebtedness as it becomes due, fund our purchase obligations outlined previously with internally generated cash and fund capital expenditures with a mixture of internally generated cash and borrowings.

Transactions that most significantly affected our foreign subsidiaries' liquidity in 2014 included:

- Emgesa: local bond issuance for Ch\$ 165 billion to finance the El Quimbo project.
- Codensa: local bond issuance for Ch\$ 53 billion to refinance short term maturities.
- Edelnor: local bond issuance for Ch\$ 77 billion to refinance short term maturities.
- Coelce: bank loan for a total amount of Ch\$ 118 billion to refinance short term maturities and CAPEX.
- Ampla: local bond issuance for a total amount of Ch\$ 75 billion to refinance short term maturities.
- Endesa Chile: Yankee bond issuance for a total amount of Ch\$ 222 billion to refinance short term maturities.

Transactions that most significantly affected our foreign subsidiaries' liquidity in 2013 included:

- Costanera: capital increase for Ch\$ 11 billion, of which 77% was subscribed by Endesa Chile, to support the capital structure of the company.
- Emgesa: local bond issuance for Ch\$ 149 billion to finance El Quimbo investment needs.
- Edelnor: local bond issuance and bank loan totaling Ch\$ 75 billion to refinance short term maturities.
- Ampla: bank loan credits for a total amount of Ch\$ 120 billion to refinance short term maturities.
- El Chocón: syndicated loan with local banks for Ch\$ 14 billion to refinance short term debt.

C. Research and Development, Patents and Licenses, etc.

None.

D. Trend Information.

Our subsidiaries are engaged in the generation, transmission, and distribution of electricity in Chile, Argentina, Brazil, Colombia, and Peru. Therefore, our businesses are subject to a wide range of conditions that may result in variability in our earnings and cash flows from year to year. In general, our net income is a result of our operating income from our generation and distribution businesses and other factors such as income from unconsolidated related companies, foreign currency exchange rate effects, and tax expense.

In our generation business, our operating income for the year ended December 31, 2014 increased by 10.7 % as compared to 2013. This percent change in the generation segment's operating income in 2014 varies in each of the five countries where we operate and is due to numerous factors, including hydrological conditions, the price of fuel used to generate thermal electricity, and the prevailing regulated and spot market prices for electricity.

We expect our reasonably good operating performance to continue during the coming years, given the favorable macroeconomic perspective for all of the countries in which we operate, except for Argentina. Despite current uncertainties concerning the global economy, there are favorable expectations for this region's growth during the next five years, including an expected 3.6% growth in gross domestic product in 2015, based on World Economic Outlook published by the IMF in October 2014 and a stable electricity demand growth.

On the other hand, development of new generation facilities in South America has always lagged behind demand growth. We anticipate that this tendency will continue for the foreseeable future. Also, due to growing environmental restrictions, transmission line saturation, obstacles for fuel transportation, and scarcity of places where to locate plants; these new projects involve higher development costs than in the past.

We expect that average electricity prices will adjust to recognize these increased costs. This could increase the value of our assets, especially in the case of hydroelectric power plants, which have lower production costs, and thus have greater profitability in scenarios of increasing prices to end users. Furthermore, an important part of the new installed capacity under development in the five countries in which we operate corresponds to thermal power plants, with coal and natural gas as their principal fuels. Thus, we expect this situation will also impact long term spot prices positively. Long term contracts awarded to our subsidiaries in different bids have already incorporated these expected price levels. Currently, 44% of our expected annual generation is sold under contracts with terms of at least ten years and an additional 53% under contracts with terms of at least five years.

However, spot prices are subject to great volatility, affecting our forecasted income. In order to address this risk in the generation business, we have implemented commercial policies to control relevant variables and provide stability to the profit margins. Our commercial policy seeks to establish a global framework to conduct energy trading operations, setting responsibilities, guidelines and acceptable risk limits aligned with our objectives. Therefore, we define contractual volumes that minimize the risk of supply in adverse hydrological conditions and include risk mitigation clauses, where necessary, with some unregulated customers.

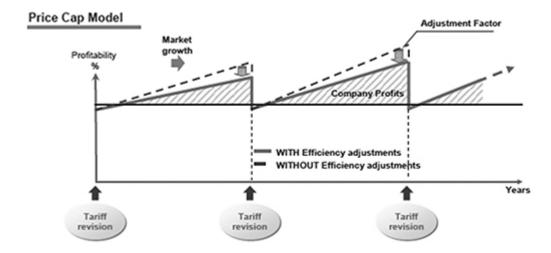

In order to mitigate the risk of increasing fuel costs, we have entered into supply contracts to cover part of the fuel needed to operate the thermal generation units, which operate with coal, natural gas, diesel, and fuel oil. In Chile, through an equity interest in GNL Quintero and GNL Chile, and a Long Term Gas Supply Agreement with GNL Chile, we are the only electricity company in Chile with direct access to the LNG terminal at Quintero Bay (the only facility of its kind in the SIC market). This enhances our position to manage fuel supply risks, especially when facing increasing fuel costs scenarios. This is becoming more important as there is an increasing trend to penalize fuel intensive technologies, such as coal and diesel, which have a greater environmental impact.

In July 2013, Endesa Chile successfully renegotiated a LNG sale and purchase agreement with British Gas. This renegotiation modified some conditions of the original contract, allowing Endesa Chile to secure its long-term LNG supply at competitive prices, with significant flexibility and at capacities sufficient for its current and future needs.

Endesa Chile also exercised a priority option to purchase additional regasification capacity as part of an expansion at the Quintero LNG Terminal. This allows us to increase our regasification capacity from 3.2 million cubic meters per day to 5.4 million cubic meters per day, as of the first quarter of 2015. This expansion will allow our San Isidro and Quintero power plants to generate additional thermal electricity and also allow Endesa Chile to secure the LNG supply necessary for potential new power plants.

With respect to our distribution business segment, our operating income for the year ended December 31, 2014 decreased by 7.8% as compared to 2013. This decrease is mainly a result of less extraordinary revenues recognized in Argentina due to regulations that recognized accumulated costs not incorporated in tariffs in comparison to 2013. We expect that the South American countries in which we operate will continue to experience high growth rates, positively impacting our distribution business performance. In particular, we expect growth rates in the electricity sector to continue, mainly due to the gap in the per capita electricity consumption that these countries have with respect to more developed countries. We estimate that electricity demand will grow approximately 4% annually, on average, over the next ten years, in the five countries in which we operate.

In connection with the distribution segment tariffs, and taking into account the future periodic review process in each country in which we operate, we expect that the regulators will continue to recognize investments, encourage efficiency, and establish prices that will allow for an appropriate return on our investment. We also anticipate that our distribution companies will increase their profitability during the period between periodic tariff setting processes, according to price cap tariff model, due to growth and economies of scale. After tariffs have been set, the companies have the opportunity to increase their efficiency, and obtain extra profits associated with such efficiencies, during the period subsequent to each new tariff setting. For a better understanding of the cycles in the process, please refer to the figure below, where we conceptually describe the effect of the application of the price cap model used by regulators in most of the countries where we operate.

Although the price at which a distribution company purchases electricity has a substantial impact on the price at which it is sold to end users, it does not have an impact on our profitability. The cost of electricity purchased is passed through to end users. However, distribution companies usually enter into long-term contracts in order to decrease exposure to electricity price volatility. This is a common practice in most of the countries in which we operate distribution companies.

Although having operations in the five countries allows us to somewhat offset and counterbalance variations with respect to the main factors that can affect our operating results, we cannot claim that our portfolio of assets is fully hedged. Furthermore, there can be no assurance that past performance will be indicative of future performance with respect to our businesses. Any significant change with respect to hydrological conditions, fuel or electricity prices, among other factors, could affect our operating income in the generation business. More broadly, any significant change with respect to economic or population growth, as well as changes in the regulatory regimes in the countries in which we operate, among other factors, could affect our operating income. Variability in our earnings and cash flows can also arise from non-operating factors as well, such as foreign currency exchange rates. For further information regarding our 2014 results compared with those recorded in previous periods, please see "— A. Operating Results — Results of Operations for the Years ended December 31, 2014 and December 31, 2013" and "— A. Operating Results — Results of Operations for the Years ended December 31, 2013 and December 31, 2012." Investors should not look at our past performance as indicative of future performance.

We do not expect that our current debt agreements, which impose certain restrictions, would have a negative impact on our capital expenditure plan and we have many sources of proven liquidity in the international and domestic capital markets. As of December 31, 2014, we are able to incur up to Ch\$ 4,165 billion in incremental debt, including Endesa Chile's incremental debt capacity of Ch\$ 2,792 billion, without entering into a breach of the debt covenants, beyond current levels of consolidated indebtedness. We believe that we will continue to have similar comfortable levels of leverage capacity for the foreseeable future. (See "Item 5. Operating and Financial Review and Prospects — B. Liquidity and Capital Resources").

We expect that we will continue generating substantial operating cash, which can be used to finance a significant part of our capital expenditure plan. If needed, our shareholders can also decrease the dividend payout ratio, subject to certain minimum legal restrictions, in order to finance our investment plan and future growth.

In order to be more responsive to the wishes of the residents living in the a surrounding areas of prospective new sites, we have shifted our focus to constructing smaller, less invasive power plants. These plants are constructed faster, allow greater flexibility to activate or deactivate according to system needs, and are generally more acceptable to residents. The local population will be involved in the planning stages of any future projects.

E. Off-balance Sheet Arrangements.

We are not a party to any off-balance sheet arrangements.

F. Tabular Disclosure of Contractual Obligations.

The table below sets forth the Company's cash payment obligations as of December 31, 2014:

Ch\$ billion	Total	2015	2016-2017	2018-2019	After 2019
Bank debt	287	40	103	102	41
Local bonds ⁽¹⁾	1,952	128	431	440	953
Yankee bonds ⁽¹⁾	977	121	233	_	622
Other debt ⁽²⁾	315	44	124	96	51
Interest expense ⁽³⁾	1,794	291	463	311	729
Pension and post-retirement obligations ⁽⁴⁾	331	62	90	78	101
Purchase obligations ⁽⁵⁾	39,320	2,343	4,323	4,305	28,349
Financial leases	115	20	50	28	17
Total contractual obligations	45,091	3,049	5,817	5,360	30,863

⁽¹⁾ Net value, hedging instruments included substantially modify the principal amount of debt.

(5) Includes generation and distribution business purchase obligations which are comprised mainly of energy purchases, operating and maintenance contracts, and other services. Of the total contractual obligations of Ch\$ 39,320 billion, 83% corresponds to energy purchased for distribution, 12% corresponds primarily to fuel supply, maintenance of medium and low voltage lines, supplies of cable and utility poles, and energy purchased for generation. The remaining 5% corresponds to miscellaneous services, such as LNG regasification, fuel transport and coal handling.

G. Safe Harbor.

The information contained in the Items 5.E and 5.F contains statements that may constitute forward-looking statements. See "Forward-Looking Statements" in the "Introduction" of this Report, for safe harbor provisions.

Item 6. Directors, Senior Management and Employees

A. Directors and Senior Management.

Our Board of Directors consists of seven members who are elected for a three-year term at an Ordinary Shareholders' Meeting ("OSM"). If a vacancy occurs in the interim, the Board of Directors elects a temporary director to fill the vacancy until the next OSM, at which time the entire Board of Directors will be elected. Our Executive Officers are appointed by the Board of Directors and hold office at the discretion of the Board.

⁽²⁾ Other debt includes governmental loan facilities, supplier credits and short-term commercial paper among others.

⁽³⁾ Interest expenses are the interest payments for all outstanding financial obligations, calculated as principal multiplied by the interest rate, presented according to when the interest payment comes due.

⁽⁴⁾ We have funded and unfunded pension and post-retirement benefit plans. Our funded plans have contractual annual commitments for contributions, which do not change based on funding status. Cash flow estimates in the table are based on such annual contractual commitments including certain estimable variable factors such as interest. Cash flow estimates in the table relating to our unfunded plans are based on future discounted payments necessary to meet all of our pension and post-retirement obligations.

Set forth below are the members of our Board of Directors as of December 31, 2014.

Directors	Position	Held Since
Jorge Rosenblut ⁽¹⁾	Chairman	2014
Borja Prado E.	Vice Chairman	2013
Andrea Brentan	Director	2009
Alberto De Paoli ⁽¹⁾	Director	2014
Rafael Fernández M.	Director	2010
Carolina Schmidt Z. (1)	Director	2014
Hernán Somerville S.	Director	1999

(1) Appointed to the Board of Directors in November 2014

At the OSM held on April 28, 2015, a new Board of Directors was elected for a period of three years starting from the date of the meeting. The members of our new Board of Directors are:

- Jorge Rosenblut
- Francesco Starace
- Francesca Di Carlo
- Alberto De Paoli
- Hernán Somervielle S.
- Carolina Schmidt Z.
- Rafael Fernández M.

At the Board of Directors meeting held on April 28, 2015, our new Board of Directors agreed to appoint Mr. Jorge Rosenblut as Chairman of the Board of Directors, and Mr. Francesco Starace as the Vice Chairman. At the same meeting, it was agreed to appoint Mr. Hernán Somervielle S., Ms. Carolina Schmidt Z. and Mr. Rafael Fernández M. as members of the Directors' Committee. Additionally, Mr. Hernán Somervielle S. was appointed as the Directors' Committee's Financial Expert.

Set forth below are brief biographical descriptions of our directors, three of whom reside in Chile, two in Spain, one in Italy and one in the United States, as of December 31, 2014.

Jorge Rosenblut Chairman of the Board of Directors

Mr. Rosenblut was appointed Chairman of the Board of Directors in November 2014. Before assuming his current position, he served as Chairman of Endesa Chile's Board of Directors since December 2009 and Chairman of Chilectra for the ten previous years. Mr. Rosenblut is an advisor to Ripley, a Chilean retailer and financial services business. He is currently a board member of the Institute of Americas of La Jolla, California. He is also involved in various educational organizations and business advisory committees in Chile and in the United States, and is a frequent writer on Latin American energy policy and the Pacific Partnership in various media, such as *El País*, *El Mercurio* and the *Financial Times*. He has been a representative of Sun Life Financial (Canada), a financial services company, and Director of AFP Cuprum, a Chilean pension fund. Between 1990 and 1996, he held positions in the government of Chile, including that of Undersecretary of Telecommunications from 1994 to 1995, and Undersecretary of the Presidency of Chile from 1995 to 1996. Mr. Rosenblut received the "Entrepreneur of the Year" award from the U.S.- Chile Chamber of Commerce in 2007 and in 2013. That same year, he was named one of the "Top 100 Businessmen in Latin America" by the Latin Business Chronicle. Mr. Rosenblut holds a degree in industrial engineering from the Universidad de Chile (Santiago, Chile), with a master's degree in public administration from Harvard University's Kennedy School of Government (Massachusetts, USA).

Borja Prado E. Vice Chairman of the Board of Directors

Mr. Prado was elected Vice Chairman of Enersis in April 2013. Mr. Prado is Chairman of Endesa Spain and Chairman of Global Coverage of Mediobanca, an Italian investment bank, and he was the Chairman of Mediobanca for Spain and Latin America between 2007 and 2014. He currently serves as Director on the boards of Enel Iberoamérica and Mediaset, an Italian mass media company, and he is a member of the Spanish Group of the Trilateral Commission, a private international organization, established in 1973 to foster greater cooperation between the United States, Europe and Japan. His professional career began in 1980 in Fomento de Comercio Exterior (Focoex), a Spanish state owned company that manages contracts for the supply of goods and services abroad. Between 1989 and 1994, he served as Vice Chairman of UBS, a Swiss bank, in Spain. In 1995, he became Director of Rothschild, a bank, in Spain, where he worked for four years. Between 1999 and 2007, he worked for Lazard, a financial advisory and asset management firm, as Vice Chairman of the Spanish branch. From 2007 to 2009, he served as a Director on the Board of Endesa Spain and Endesa Chile. Mr. Prado studied law at the Universidad Autónoma de Madrid (Madrid, Spain). He continued his studies in

international relations and foreign trade at New York University (New York, USA).

Andrea Brentan Director

Mr. Brentan has been a Director since 2009 and he served as Vice Chairman from 2009 to April 2013. Mr. Brentan also was the CEO of Endesa Spain between July 2009 and October 2014. He was a research assistant at New York University from 1975 to 1977 and then held various positions at GIE, an Italian power plant contractor with worldwide operations, until the beginning of 1991. From 1991 to 1999, he successively held the positions of CFO and CEO at Sae Sadelmi, a Milan-based company belonging to the ABB Group, engaged in power plant engineering, procurement, and construction, as well as electrical generation equipment manufacturing and service. From 2000 to 2002, he was the Head of the Worldwide Steam Power Plant at Alstom, a French power company, based in Paris. He joined Enel in November 2002, where he held several positions in the company, including Head of Business Development and the M&A unit of the International Division, Chairman of Viesgo S.A., a Spanish generation company, Chairman of Enel North America, Enel Latin America and Slovenske Elektrárne, an Enel subsidiary in the Slovak Republic, and Director and CEO of Enel

Iberoamérica. He currently holds the position of Director of Enel Green Power, and he was Director of Enel Investment Holding, Enel Capital and of Enel Unión Fenosa Renovables. Until June 2009, he served as Director of the Iberian Peninsula and Latin American Division of Enel and Vice Chairman of the Board of Endesa Spain. Mr. Brentan received a degree in mechanical engineering from Politecnico di Milano (Milan, Italy) and holds a M.Sc. in Applied Science from New York University (New York, USA).

Alberto De Paoli Director

Mr. De Paoli was elected a Director in November 2014. He was appointed CFO of Enel in November 2014. Between 1993 and 2008, Mr. De Paoli worked in the telecommunications sector, first at Telecom Italia, then Wind Telecomunicazioni and finally Tiscali, where his roles included Head of Planning and Control, CFO, Head of Strategy, M&A and Business Development, as well as Executive Assistant to the CEO. From April 2008 to April 2012, he was CFO of Enel Green Power, where he led the listing of the company on the Milan and Spanish stock exchanges. Between May 2012 and November 2014, he was Head of Group Strategy for Enel. He holds a degree in economics from the University of Rome La Sapienza (Rome, Italy).

Rafael Fernández M. Director, Member of the Directors' Committee

Mr. Fernández was elected a Director of Enersis in April 2010. From 1997 to 2006, Mr. Fernández served as Chairman of the Board and Director of various Argentine electricity companies in generation, transmission, distribution, and trading, as well as in natural gas production and transport companies. Before that, he was CEO of several power generation companies. He also founded and was a member of the Academic Committee in the Masters Program in Electricity Business at ITBA, an Argentine university, until 2006, and from 2006 until 2010, was a member of the Advisory Committee of the Development Department of Universidad Alberto Hurtado, a Chilean university. Between 2002 and 2006, he was the Executive Director of the Gas and Energy Business Division and member of the Board of Directors of Petrobras Energía, a Brazilian state-owned oil and gas company, in Argentina. Between 2006 and January 2010, he served as CEO and Director of Petrobras Chile Petrolera Ltda. Since October 2011, he has been a member of the Board of Directors of Australis Seafood S.A., a Chilean salmon company, and Chairman of Australis Seafood's Director's Committee. From June 2010 to December 2013, he was CEO of Corporación de Capacitación y Empleo, a subsidiary of Sociedad de Fomento Fabril (SOFOFA), a non-profit trade association representing the views and interests of Chilean businessmen.

Mr. Fernández received a degree in civil industrial engineering from Pontificia Universidad Católica de Chile (Santiago, Chile). He also carried out graduate studies at E.S.A.E. in the same university in 1988-1989, and the Advanced Management Program at Duke University (North Carolina, USA) in 2004.

Carolina Schmidt Z. Director, Member of the Directors' Committee

Ms. Schmidt was elected a Director in November 2014. Between March 2010 and April 2013, she was Minister of SERNAM, the Chilean National Service for Women, and from April 2013 to March 2014 she was Minister of Education, both under former President Sebastián Piñera's administration. Ms. Schmidt is a member of the Women Corporate Directors Group and has participated as Council Member of Comunidad Mujer, a private nonprofit corporation that promotes policies to achieve greater participation of women in the public sphere. She was an advisor to CEMM, the Women's Business Studies Center at Universidad del Desarrollo (Chile) and was an independent member of the Childhood Policies Advisor Council, created by President Michelle Bachelet in her first term in office. In the private sector, Ms. Schmidt was CEO of Capital, a business magazine, Compañía de Alimentos CCU S.A. a firm in the food industry, a Director of Viña Tabalí S.A., a vineyard, and Distribuidora Digraf, an advertising graphics input supplier. Ms. Schmidt holds a business administration degree from Pontificia Universidad Católica de Chile (Santiago, Chile).

Hernán Somerville S. Director, Chairman of the Directors' Committee

Mr. Somerville has been a Director since 1999 and the Committee's Financial Expert since April 2013. From 1983 to 1988, he was Director of the Central Bank of Chile, serving as Chief Debt Negotiator for Chilean public and private commercial bank debt. Mr. Somerville was the Chairman of CPC, the Chilean Confederation of Production & Commerce. Since 1989, he has been the Managing Director and Partner of Fintec, a Chilean investment, advisory and management company. He was the Chairman of the Chilean Association of Banks and Financial Institutions, and also was Chairman of the Latin American Federation of Banks. He was the former Chairman of Transbank S.A., which manages credit and debit cards in Chile. He was also a Board Member of INACAP, a Chilean vocational school, and the former Chairman of the Chilean Pacific Foundation, a Chilean foundation with links to Pacific Ocean countries. Mr. Somerville earned a law degree from Universidad de Chile (Santiago, Chile) and studied Comparative Law at New York University Law School (New York, USA).

Executive Officers

Set forth below are our Executive Officers as of December 31, 2014, except as otherwise noted below.

Executive Officers	Position	Current Position Held Since
Luca D'Agnese ⁽¹⁾	Chief Executive Officer	2015
Daniel Fernández K.	Deputy Chief Executive Officer	2014
Marco Fadda	Planning and Control Officer	2013
Javier Galán A.	Chief Financial Officer	2014
Eduardo López M. ⁽²⁾	Procurement Officer	2010
José Miranda M.	Communications Officer	2014
Alain Rosolino	Internal Audit Officer	2012
Domingo Valdés P.	General Counsel	1999
Paola Visintini V.	Human Resources Officer	2014

⁽¹⁾ Appointed Enersis' CEO by the Board of Directors on January 29, 2015.

Set forth below are brief biographical descriptions of our Executive Officers, all of whom reside in Chile.

Luca D'Agnese was appointed CEO of Enersis in January 2015. He started his career at Hewlett-Packard, an information technology firm. In 1988, he started working for McKinsey & Company, a management consulting company, where he became partner. From 2003 to 2005, Mr. D'Agnese was the CEO of the Italian company, Gestore della Rete di Transmissione Nazionale (GRTN), which later merged with Terna, and manages the Italian electricity transmission network. In Terna, he was Operations Director and was in charge of planning and implementation of investments, as well as network operations and maintenance. Between 2007 and 2010, he was the CEO of Ergycapital, an Italian investment company listed on the Milan Stock Exchange specializing in renewable energy.

Mr. D'Agnese joined Enel in 2011 as Romanian country manager. In 2014, he became Director of the Eastern European Division, as well as Chairman of the Board of Directors and CEO of Slovenské Elektrárne, an Enel subsidiary in the Slovak Republic. Mr. D'Agnese holds a degree in physics from Scuola Normale Superiore di Pisa (Pisa, Italy) and holds an M.B.A. from the INSEAD business school (Fontainebleau, France).

Daniel Fernández K. became Deputy Chief Executive Officer in November 2014. He was previously Vice Chairman of HidroAysén. Mr. Fernández has vast experience in the oil & gas sectors, urban infrastructure, concessions, ports, drinking water, housing, mining logistics, media, energy and public policy in public and private companies. Mr. Fernández was Chairman of the Board of Directors of Metro S.A., the Santiago subway system, Ferronor S.A., a Chilean railway transport company, and Chairman of the Latin-Iberoamerican Association of Subway and Underground (ALAMYS, in its Spanish acronym). He was member of the Board of Directors of Esval, a Chilean water utility, EFE, a state-owned Chilean railway company and of the Corporación para la Promoción del Financiamiento de la Vivienda, a corporation which promotes housing finance. He was CEO of ENAP, a Chilean state-owned petroleum company and of the Complejo Portuario Mejillones S.A. a Codelco subsidiary created to promote port development in the Bay of Mejillones, Chile. Mr. Fernández was advisor to the Minister of Transportation and Telecommunications in Urban Transportation Planning and was Executive Secretary of the Investment Planning Commission in Transportation Infrastructure (SECTRA). Additionally, Mr. Fernández taught Transportation Planning and Traffic Management Models at Universidad de Chile's Transportation Engineering Program and, recently, has been professor of Social Environments Complexity in the M.B.A. program of Universidad Adolfo Ibañez (Santiago, Chile). Mr. Fernández holds a degree in civil engineering from Universidad de Chile (Santiago, Chile). He is certified in Spiral Dynamics (an analysis and cultural change tool) by the National Values Center of California (California, USA).

Marco Fadda was appointed Planning and Control Officer of Enersis in April 2013. In 1998, he joined Enel, and in 1999 he was promoted to head of Management Control at Enel Trade S.p.A. in the Administration, Finance and Control Department, where he spent four years. He later joined the Department of Planning and Control of Generation & Energy Management (GEM Division), and in 2009 was promoted to Manager of Planning and Control of the GEM Division. He has been a member and team coordinator on significant international projects. Mr. Fadda holds a degree in economics from the Università degli Studi di Genova (Geneva, Italy) and received a masters in network business administration at the Polytecnicodi Milano (Milan, Italy).

Javier Galán A. was appointed the CFO of Enersis in December 2014. He joined Endesa Spain in 1992 as International Operations Officer. In 1993, he became CFO of Endesa Desarrollo, a subsidiary of Endesa Spain, where he initiated the international expansion of Endesa Spain's operations, mainly in Latin America. Since then, he has held various managerial positions within the group with responsibilities in Finance, Management Control, Strategy, and M&A, as well as serving on several Boards of Directors. In 2006, he was appointed Endesa Spain's CFO and in 2013 CFO of an Enel division in Italy. Before joining Endesa Spain, Mr. Galán

⁽²⁾ In January 2015, Mr. Antonio Barreda replaced Mr. López as the Procurement Officer.

worked at the Chase Manhattan Bank, N.A., in London, as the Vice Chairman of Corporate Finance and in Madrid as Senior Analyst in the Corporate Finance and Treasury Program, as Treasurer of Red Eléctrica de España S.A., the operator of the Spanish electricity system. Mr. Galán holds an economics degree from Universidad Complutense de Madrid (Madrid, Spain) and an M.B.A. from the Instituto de Empresas de Madrid (Madrid, Spain), and a graduate degree in Senior Management from the IESE Business School (Madrid, Spain).

Eduardo López M. served as Procurement Officer from June 2008 to January 2015. He joined the group in 1981 and served in several positions in the finance department at Chilectra until 1992. Between 1992 and 1995, he worked at Edesur where he served as Sales Director. He was also CEO of Diprel S.A., our former subsidiary, between 1996 and 2001. In 2002, he was appointed as Enersis' Procurement Director and from 2004 until 2008 he held the same position at CAM. Mr. López received a degree in commercial engineering from Pontificia Universidad Católica de Valparaíso (Valparaíso, Chile).

José Miranda M. was appointed Communications Officer in December 2014. Mr. Miranda worked 11 years in Televisión Nacional de Chile (TVN), a Chilean TV channel, as producer of many shows and covering events such as presidential elections in Peru, Venezuela and the rescue of 33 underground miners in Chile. From 2008 to 2010, he worked as General Producer of the Chilean news channel "Canal 24 Horas de Noticias," another TVN channel. In 2011, Mr. Miranda joined TVN again, as General Producer of the Entertainment Area and later as Executive Producer of Children's Content and Executive Producer of Purchasing International and National Contents. Mr. Miranda is an Audiovisual Communicator with a degree from DUOC UC (Santiago, Chile), holds a graduate degree in Management Skills from Universidad de Chile (Santiago, Chile) and he participated in the program "Corporate Entrepreneur and Open Innovation" from Berkeley University-Fundación Chile.

Alain Rosolino was appointed Internal Audit Officer in December 2012. He joined Enel in 2003, having held several positions in the audit area at Enel, Enel Romania, Enel Green Power, Enel Latin America, and from 2011 to 2012, at Enel EGP IBAL (Iberian Peninsula and Latin America). Mr. Rosolino holds a business administration degree from Libera Università Internazionale degli Studi Sociali Guido Carli (Rome, Italy).

Domingo Valdés P. has been General Counsel since May 1999 and is in charge of our Legal Counsel and Corporate Governance Department. He joined Chilectra in 1993 and Enersis in 1997. Mr. Valdés worked as an intern at the New York City law firms of Milbank, Tweed, Hadley & McCloy and Chadbourne & Parke LLP. Before joining Chilectra, Mr. Valdés was a lawyer at Chase Manhattan Bank, N.A., Corporate Department (Chile) and an associate at Carey & Cía., a Santiago based law firm. Mr. Valdés is also Secretary of the Enersis Board of Directors and a Professor of Economic and Antitrust Law at Universidad de Chile Law School. Mr. Valdés holds a law degree from Universidad de Chile (Santiago, Chile), a Master of Law Degree from University of Chicago (Illinois, USA) and he attended a Management Program for Lawyers at the Yale University School of Management (Connecticut, USA).

Paola Visintini V. was appointed Enersis' Human Resources Officer in December 2014. She joined us in 2005 as Commercial Development Assistant Officer of Chilectra. After six years, she became Enersis' Communications Officer. In 2013, she was appointed Head of the Communications Agency of the Latin American Division of Enersis. Before joining us, Ms. Visintini worked as the Advertising and Market Research Assistant Manager in Bellsouth Chile S.A., a telecommunications company, as the Head of the IT Department at Banco Santander, as Studies Director at Search Marketing S.A. and as a clinical psychologist in the Consultorio El Roble CIDECO. Ms. Visintini holds a degree in psychology from Universidad de Chile (Santiago, Chile) with postgraduate studies in leadership and coaching, and trained as an Ontological Coach by Newfield (Santiago, Chile).

B. Compensation.

At the OSM held on April 16, 2013, our shareholders approved the current compensation policy for the Board of Directors. Directors are paid an annual variable fee equivalent to 0.1% of our net earnings for the current year based on the statutory consolidated financial statements filed with the SVS (for further details about the differences between IFRS financial statements and statutory financial statements, see Item 3. Key Information. – A. Selected Financial Data). In addition, they receive a monthly fee payable in advance, depending on their attendance at Board meetings and their participation as Director of any of our subsidiaries. These monthly advances consist of a fixed compensation of UF 101 per month and a fee of UF 66 depending on attendance to Board meetings. Both fees are considered as an advance on the annual variable fee. Once our net earnings are approved at the OSM of the following year, we pay the difference between the accrued annual fee and the total monthly fees paid in advance, but only if the resulting amount is positive. The Chairman of the Board is entitled to double the compensation compared to other directors under this policy, while the Vice Chairman will receive fixed compensation of UF 151.5 per month and a fee of UF 99 depending on attendance to Board meetings. The members of the Directors' Committee are paid a variable annual fee, equivalent to 0.011765% of our net earnings of the current year. In 2014, the total compensation paid to each of our directors was as follows:

	Year ended December 31, 2014			
Director	Fixed Compensation	Variable Compensation ⁽¹⁾	Directors' Committee	Total
	(in thousands of Ch\$)			
Jorge Rosenblut ⁽²⁾	9,275	16,140		25,414
Borja Prado E.	43,661	68,364		112,025
Andrea Brentan ⁽³⁾	6,872	12,866		19,738
Alberto De Paoli ⁽⁴⁾	_	_	_	_
Rafael Fernández M.	29,108	65,315	18,731	113,154
Luigi Ferraris ⁽⁵⁾	_	_	_	_
Rafael Miranda R. ⁽⁶⁾	_	7,028	_	7,028
Carolina Schmidt Z. ⁽⁷⁾	4,968	8,070	3,192	16,230
Hernán Somerville S.	29,108	66,924	18,731	114,762
Eugenio Tironi B.(6)	_	7,028	_	7,028
Leonidas Vial E. ⁽⁸⁾	24,140	57,263	14,236	95,639
Pablo Yrarrázaval V. ⁽⁸⁾	48,279	98,608		146,887
Total	195,409	407,604	54,891	657,905

- (1) Includes the monthly variable fee paid in advance and any positive balance against the annual variable fee.
- (2) Mr. Rosenblut was appointed director in November 2014.
- (3) Mr. Brentan waived compensation for his positions as director until October 2014.
- (4) Mr. De Paoli was appointed director in November 2014 and waived compensation for his position as director.
- (5) Mr. Ferraris ceased to be a director in November 2014, and had waived compensation prior to that.
- (6) Messrs. Miranda and Tironi ceased to be directors in April 2013; however, they received payments in 2014 due to differences between the annual variable fee accrued in 2013 and the monthly fee paid in advance for that year.
- (7) Ms. Schmidt was appointed director in November 2014.
- (8) Messrs. Vial and Yrarrázaval ceased to be directors in October 2014.

We do not disclose, to our shareholders or otherwise, any information about an individual Executive Officer's compensation. For the year ended December 31, 2014, the aggregate gross compensation, paid or accrued, for all our Executive Officers, attributable to fiscal year 2014, was Ch\$ 3,028 million in fixed compensation and Ch\$ 1,392 million in variable compensation. Our Executive Officers are eligible for variable compensation under a bonus plan for meeting company—wide objectives and for their individual contribution to our results and objectives. The annual bonus plan provides for a range of bonus amounts according to seniority level. The bonuses paid to executive consist of a certain multiple of gross monthly salaries. The amount we accrued in 2014 to provide for pensions, retirement or similar benefits to our Executive Officers totaled Ch\$ 116.3 million.

All of our Executive Officers have severance indemnity agreements with us in the event of voluntary resignation, termination by mutual agreement among the parties, or death. They do not have a right to severance indemnity if their relationship with us is terminated due to willful misconduct, prohibited negotiations, unjustified absences, abandonment of duties, among other causes, as defined in Article 160 of the Chilean Labor Code. All of our employees are entitled to legal severance pay if terminated due to our needs, as defined in Article 161 of the Chilean Labor Code.

The funds accrued to provide severance indemnity to our Executive Officers was Ch\$ 336.5 million, of which Ch\$ 101.1 million was accrued during 2014. There are no other amounts set aside or accrued to provide for pension, retirement or similar benefits for our Executive Officers.

C. Board Practices.

Our Board of Directors was elected at the OSM held on April 16, 2013, for a three year period which ends in April 2016. However, given that several members of the elected Board of Directors resigned from their positions during 2014, our Board exercising the power under article 32 of the Companies Act, replaced the directors until the April 28, 2015 OSM, in which a new Board of Directors will be elected for a new three year period. For information about each of the directors and the year that they began their service on the Board of Directors, see "— A. Directors and Senior Management" above. Members of the Board of Directors do not have service contracts with us or with any of our subsidiaries that provide them benefits upon termination of their service.

Corporate Governance

We are managed by our Board of Directors, which, in accordance with our bylaws, consists of seven directors who are elected by our shareholders at an OSM. Each director serves for a three-year term, at the end of which each of the seven directors will be reelected or replaced. Directors can be reelected indefinitely. Staggered terms are not permitted under Chilean law. If a vacancy occurs on the board during the three-year term, the Board of Directors may appoint a temporary director to fill the vacancy. Any vacancy triggers an election for every seat on the Board of Directors at the next OSM.

Chilean corporate law provides that a company's board of directors is responsible for the management, administration and representation of a company in all matters concerning its corporate purpose, subject to the provisions of the company's bylaws and the stockholders' resolutions. In addition to the bylaws, our Board of Directors has adopted regulations and policies that guide our corporate governance principles.

The Charter Governing Executives, approved by our Board on May 28, 2003, and the Employee Code of Conduct, explain our principles and ethical values, establish the rules governing our contact with customers and suppliers, and establish the principles that should be followed by employees, including ethical conduct, professionalism and confidentiality. They also impose limitations on the activities that our executives and other employees may undertake outside the scope of their employment with us.

In order to ensure compliance with Securities Market Law 18,045 and SVS regulations, our Board of Directors, at its meeting held on May 28, 2008, approved the "Manual for the Management of Information of Interest to the Market" (the "Manual"). This document addresses applicable standards regarding the information in connection with transactions of our securities and those of our affiliates, entered into by directors, management, principal executives, employees and other related parties; the existence of blackout periods for such transactions undertaken by directors, principal executives and other related parties, existence of mechanisms for the continuous disclosure of information that is of interest to the market and mechanisms that provide protection for confidential information. The Manual was released to the market in 2008, and is posted on our website at www.enersis.cl. In 2010, the Manual was modified in order to comply with the provisions of Law 20,382 (Corporate Governance Improvement Law). The provisions of this Manual shall be applied to the members of our Board, as well as our executives and employees who have access to confidential information, and especially those who work in areas related to the securities markets.

In order to supplement the aforementioned corporate governance regulations, at its meeting held on June 24, 2010, our Board approved a Code of Ethics and a Zero Tolerance Anti-Corruption Plan ("ZTAC Plan"). The Code of Ethics is structured on the basis of general principles such as impartiality, honesty, integrity and other ethical standards of similar importance, all of which are expected from our employees. The ZTAC Plan reinforces the principles included in the Code of Ethics, but with special emphasis on avoiding corruption in the form of bribes, preferential treatment, and other similar matters.

At its meeting held on March 29, 2011, our Board approved the Penal Risk Prevention Model required by Law 20,393 of December 2, 2009, which imposes criminal responsibility on legal entities for the crimes of asset laundering, financing of terrorism and bribing of public officials. The law encourages companies to adopt this model, whose implementation involves compliance with managerial and supervision duties. The adoption of this model therefore mitigates, and in some cases relieves, the effects of criminal responsibility even when a crime is committed. One of the elements of this model is the Penal Risk Prevention Officer, who was appointed by the Board at its meeting held on October 27, 2010. As of December 31, 2014, our Penal Risk Prevention Officer was Alain Rosolino. Internal Audit Officer.

On October 27, 2010, our Board approved "Guidelines 231: Guidelines applicable to non-Italian subsidiaries in accordance with Legislative Decree 231 of June 8, 2001. Application to Endesa Spain and its Group." Given that our parent company, Enel, has to comply with Italian Legislative Decree 231, which establishes management responsibility for Italian companies as a consequence of certain crimes committed in Italy or abroad, in the name of or for the benefit of such entities, including those crimes described in Chilean Law 20,393, this document, approved by the Board, sets a group of measures, with standards of behavior expected from all employees, advisers, auditors, officials, directors as well as consultants, contractors, commercial partners, agents and suppliers. Legislative Decree 231 includes various activities of a preventive nature that are coherent with and integral to the requirements and compliance with Chilean Law 20,393, which deals with the criminal responsibility of legal entities. These guidelines are supplementary to the standards included in the Code of Ethics and the ZTAC Plan.

On November 29, 2012, the SVS issued General Regulation No. 341 which established regulations for the disclosure of information with respect to the standards of corporate governance compliance adopted by publicly held limited liability corporations and set the procedures, mechanisms, and policies that are indicated in the Appendix to the regulation. The objective of this regulation is to provide credible information to investors with respect to good corporate governance policies and practices adopted by publicly

held limited liability corporations, which include us, and permit entities like stock exchanges to produce their own analyses to help the various market participants to understand and evaluate the commitment of companies. The Appendix is divided into the following five sections with respect to which companies must report the corporate practices that have been adopted: (i) the functioning of the board, (ii) relations between the company, shareholders, and the general public, (iii) the replacement and compensation of senior executives, (iv) the definition, implementation, and supervision of the company's internal control, risk management policies, and procedures, and (v) other practices adopted by the company that do not refer to the above matters. Publicly held limited liability corporations should send the information with respect to corporate governance practices to the SVS no later than March 31 of each year, using the contents of the Appendix to this regulation as criteria. If none of them is adopted, the company must explain its reasons to the SVS. The information should refer to December 31 of the calendar year prior to its dispatch. At the same time, such information should be at the public's disposal on the company's website, and must be sent to the stock exchanges.

Compliance with the New York Stock Exchange Listing Standards on Corporate Governance

The following is a summary of the significant differences between our corporate governance practices and those applicable to U.S. domestic issuers under the corporate governance rules of the New York Stock Exchange ("NYSE").

Independence and Functions of the Directors' Committee (Audit Committee)

Under the NYSE corporate governance rules, all members of the Audit Committee must be independent. We have been subject to this requirement since July 31, 2005. On April 22, 2010, at an Extraordinary Shareholders' Meeting ("ESM"), our bylaws were amended and the Audit Committee was merged with the Directors' Committee. According to our bylaws, all members of this Committee must satisfy the requirements of independence as stipulated by the NYSE. Also, Chilean law requires that at least two thirds of the Directors' Committee be independent directors. According to Chilean law, a member would not be considered independent if, at any time, within the last 18 months he (i) maintained any relationship of a relevant nature and amount with the company, with other companies of the same group, with its controlling shareholder or with the principal officers of any of them or has been a director, manager, administrator or officer of any of them; (ii) maintained a family relationship with any of the members described in (i) above; (iii) has been a director, manager, administrator or principal officer of a non-profit organization that has received contributions from (i) above; (iv) has been a partner or a shareholder that has controlled, directly or indirectly, 10% or more of the capital stock or has been a director, manager, administrator or principal officer of an entity that has provided consulting or legal services for a relevant consideration or external audit services to the persons listed in (i) above; and (v) has been a partner or a shareholder that has controlled, directly or indirectly, 10% or more of the capital stock or has been a director, manager, administrator or principal officer of the principal competitors, suppliers or customers. In case there are not sufficient independent directors on the Board to serve on the Directors' Committee, Chilean law determines that the independent director nominates the rest of the members of the Directors' Committee among the remaining Board members that do not meet the Chilean law independence requirements. Chilean law also requires that all publicly held limited liability stock corporations that have a market capitalization of at least UF 1,500,000 (Ch\$ 36.9 billion as of December 31, 2014) and at least 12.5% of its voting shares are held by shareholders that individually control or own less than 10% of such shares, must have at least one independent director and a Directors' Committee.

Under the NYSE corporate governance rules, the audit committee of a U.S. company must perform the functions detailed in, and otherwise comply with the requirements of NYSE Listed Company Manual Rules 303A.06 and 303A.07. As of July 31, 2005, Non-U.S. companies have been required to comply with Rule 303A.06, but are not required to comply with Rule 303A.07. Since July 31, 2005, we have complied with the independence and the functional requirements of Rule 303A.06. As required by the Sarbanes-Oxley Act ("SOX") and the NYSE corporate governance rules, on June 29, 2005, our Board of Directors created an Audit Committee, composed of three directors who were also members of the Board. As previously mentioned, this Audit Committee was merged into the Directors' Committee in April 2010. As required by our bylaws, the members of the Directors' Committee, composed of three members of the Board, should comply with Chilean law, as well as with the criteria and requirements of independence prescribed by SOX, the SEC and the NYSE. As of December 31, 2014, our Directors' Committee was composed of three independent directors, all of whom met the independence criteria of Chilean law, SOX, the SEC and the NYSE.

Our Directors' Committee performs the following functions:

- review of financial statements and the reports of the external auditors prior to their submission for shareholders' approval;
- formulate the proposal to the Board of Directors, which will make its own proposals to shareholders' meetings, for the selection of external auditors and private rating agencies;
- review of information related to transactions of the Company with related parties and reports the opinion of the Directors' Committee to the Board of Directors;

- the examination of the compensation framework and plans for managers, executive officers and employees;
- the preparation of an Annual Management Report, including its main recommendations to shareholders;
- provide information to the Board of Directors about the convenience of recruiting external auditors to provide non-auditing services, when such services are not prohibited by law, depending on whether such services might affect the external auditors' independence;
- oversee the work of external auditors;
- review and approval of the annual auditing plan by the external auditors;
- evaluate the qualifications, independence and quality of the auditing services;
- elaborate on policies regarding employment of former members of the external auditing firm;
- review and discuss problems or disagreements between management and external auditors regarding the auditing process;
- establish procedures for receiving and dealing with complaints regarding accounting, internal control and auditing matters;
- any other function mandated to the committee by the bylaws, our Board of Directors or our shareholders.

As of December 31, 2014, Messrs. Fernández and Somerville (Chairman), as well as Ms. Schmidt, were members of the Audit Committee, all of whom complied with the independence requirements of the SEC, SOX, the NYSE and Chilean law.

Corporate Governance Guidelines

The NYSE's corporate governance rules require U.S.-listed companies to adopt and disclose corporate governance guidelines. Although Chilean law does not provide for this practice (except for the Manual), we have adopted the codes of conduct described above, and at our ESM held in March 2006, we approved the inclusion of articles in our bylaws that govern the creation, composition, attributions, functions and compensation of the Directors' Committee and the Audit Committee.

In order to comply with the new requirements of Law No. 20,382, which amended the Chilean Companies Act, at the ESM held on April 22, 2010, our shareholders approved amendments to our bylaws, including amendments providing for the merger of the Directors' and Audit Committees. The Directors' Committee is currently composed of three members that comply with the SOX independence requirements and the NYSE corporate governance rules. The Directors' Committee includes among its functions the duties previously performed by the Audit Committee.

D. Employees.

The following table provides the total number of personnel (both permanent and temporary) and the number of personnel (both permanent and temporary) of each of our consolidated subsidiaries as of December 31, 2014, 2013, 2012.

Company	2014	2013	2012

⁽¹⁾ As a result of the 2013 capital increase, Enersis began accounting for Cemsa, Dock Sud, EEPSA and Generalima on a consolidated basis as of April 1, 2013.

⁽²⁾ As a result of Endesa Chile's purchase of an additional 50% interest in GasAtacama Holding, we began accounting for GasAtacama Holding and its subsidiaries on a consolidated basis since May 2014.

⁽³⁾ Includes En-Brasil Comercio e Serviços S.A.

⁽⁴⁾ Includes employees of Ingendesa's subsidiary in Brazil. During 2011, Ingendesa employees were transferred to Endesa Chile.

⁽⁵⁾ This company was sold by Endesa Chile in January 2015.

⁶⁾ Includes Luz Andes S.A. and Empresa Eléctrica de Colina S.A.

⁽⁷⁾ In November 2014, IMV was merged with ICT, which changed its name to Servicios Informáticos e Inmobiliarios Ltda. 2013 and 2012 include ICT, IMV, Maitenes and Aguas Santiago Poniente. The 2014 data only includes ICT and IMV, since the other two companies were sold in December 2014.

Chile

All Chilean employees who are dismissed for reasons other than misconduct are entitled by law to a severance payment. According to Chilean law, permanent employees are entitled to a basic payment of one-month's salary for each year (or a six-month portion thereof) worked, subject to a limit of a total payment of no more than 11 months' pay for employees hired after August 14, 1981. Severance payments to employees hired prior to that date consist of one-month's salary for each full year worked, not subject to any limitation on the total amount payable. Under our collective bargaining agreements, we are obligated to make severance payments to all covered employees in cases of voluntary resignation or death in specified amounts that increase according to seniority and may exceed the amounts required under Chilean law.

Enersis has two collective bargaining agreements, both signed during 2011, which will be in force until July and December 2015. Chilectra has five collective bargaining agreements, all of them signed in 2012, which expire in December 2016. Empresa Eléctrica de Colina has one collective bargaining agreement, signed in 2011, which expires in October 2015. SIEI has one agreement which expires in December 2015. Endesa Chile has four collective bargaining agreements in Chile, which will expire between 2015 and 2017.

Argentina

Edesur has two collective bargaining agreements which both expired in 2014 and are still in the renegotiation process. El Chocón has two collective bargaining agreements, of which one expires in December 2016, and the other already expired and is still in the renegotiation process. Costanera has two collective bargaining agreements, which both expired in 2014. Under Argentine law, collective bargaining agreements are automatically renewed until a new agreement is reached, which it is expected to occur in 2015.

The result of collective bargaining agreements is subject to the result of the negotiations between the government and trade union federations, with regards to wage increases and the incorporation of contracted workers into the workforce of the companies.

Brazil

Ampla has five collective bargaining agreements, of which four will expire in 2015 and one expired in 2014 and is currently being renegotiated. Coelce has two collective bargaining agreements which will be in force until October 2015. CIEN has two collective bargaining agreements which will expire in 2015. Cachoeira Dourada has two collective bargaining agreements, of which one will expire in April 2015 and the other in September 2015. Fortaleza has two collective bargaining agreements that will expire in 2015.

Under Brazilian law, collective bargaining agreements cannot last for more than two years.

Colombia

Codensa and Emgesa have two collective bargaining agreements with two different unions, which expired in October and December 2014 and are currently being renegotiated. Under Colombian labor law, collective bargaining agreements are automatically renewed until a new agreement is in force.

Peru

Edelnor has four collective bargaining agreements, which expired in December 2014 and are in the renegotiation process. Edegel has one collective bargaining agreement signed in 2009, which expired in December 2014 and is currently in the process of renegotiation. EEPSA has one collective bargaining agreement, which expires in December 2017.

Our management believes that it has a good relationship with its labor unions.

E. Share Ownership.

To the best of our knowledge, none of our directors or officers own more than 0.1% of our shares. None of our directors and officers has any stock options. It is not possible to confirm whether any of our directors or officers has a beneficial, rather than direct, interest in our shares. To the best of our knowledge, any share ownership by all of our directors and officers, in the aggregate, amounts to significantly less than 10% of our outstanding shares.

Item 7. Major Shareholders and Related Party Transactions

A. Major Shareholders.

We have only one class of capital stock and Enel S.p.A., our ultimate controlling shareholder, has no different voting rights than our other shareholders. As of April 28, 2015, our 49,092,772,762 shares of common stock outstanding were held by 6,940 stockholders of record. There were five record holders of our ADSs as of such date.

It is not practicable for us to determine the number of ADSs or common shares beneficially owned in the United States, as the depositary only has knowledge of the record holders, including the Depositary Trust Company and its nominees. As such, we are not able to ascertain the domicile of the final beneficial holders represented by the seven ADS record holders. Likewise, we cannot readily determine the domicile of any of our foreign stockholders who hold our common stock, either directly or indirectly.

On October 23, 2014, Endesa Spain sold its direct and indirect ownership interest in shares of Enersis to a wholly-owned Spanish subsidiary of Enel. As a result, Enel now owns 60.6% of us through Enel Latinoamérica (40.3%) and Enel Iberoamérica (20.3%), as described further below.

As of April 28, 2015, Enel beneficially owned 60.6% of our shares. Chilean private pension funds (AFPs), owned 12.2% in the aggregate. Chilean stockbrokers, mutual funds, insurance companies, foreign equity funds, and other Chilean institutional investors collectively held 14.9% of our equity. ADS holders owned 10.7%, and the remaining 1.7% was held by 6,755 minority shareholders.

The following table sets forth certain information concerning ownership of the common stock as of April 28, 2015, with respect to each stockholder known by us to own more than 5% of the outstanding shares of common stock:

	Number of Shares	Percentage of Shares
	Owned	Outstanding
Enel Latinoamérica ⁽¹⁾	19,794,583,473	40.3%
Enel Iberoamérica	9,967,630,058	20.3%

⁽¹⁾ Enel Latinoamérica is wholly-owned by Enel Iberoamérica, which in turn is wholly-owned by Enel.

Enel, an Italian generation and distribution company which is publicly traded on the Milan Stock Exchange, is primarily engaged in the energy sector, with a presence in 32 countries worldwide, and approximately 95 GW of net installed capacity. It provides service to more than 61 million customers through its electricity and gas businesses.

B. Related Party Transactions.

Article 146 of Law 18,046 (the "Chilean Companies Act") defines related-party transactions as all transactions involving a company and any entity belonging to the corporate group, its parent companies, controlling companies, subsidiaries or related companies, board members, managers, administrators, senior officers or company liquidators, including their spouses, some of their relatives and all entities controlled by them, in addition to individuals who may appoint at least one member of the company's board of directors or who control 10% or more of voting capital, or companies in which a board member, manager, administrator, senior officer or company liquidator has been serving in the same position within the last 18 months. The law establishes that in the event that these persons fulfill the requirements established by Article 146, such persons must immediately inform the Board of Directors of their related-party nature or such other group as the Board may appoint for that purpose. As required by law, "related-party transactions" must comply with corporate interests, as well as prices, terms and conditions prevailing in the market at the time of their approval. They must also meet all legal requirements, including acknowledgement and approval of the transaction by the board (excluding the affected directors), by the ESM (in some cases, with requisite majority approval) and by any applicable regulatory procedures.

The aforementioned law, which also applies to our affiliates, also provides for some exceptions, stating that in certain cases, Board approval would suffice for "related-party transactions," pursuant to certain related-party transaction thresholds and when such transactions are conducted in compliance with the related-party policies defined by the company's board. At its meetings held on December 17, 2009 and April 23, 2010, our Board of Directors approved a related-party transaction policy (*política de habitualidad*) effective as of January 1, 2010. This policy is available on our website.

If a transaction is not in compliance with Article 146, this would not affect the transaction's validity, but we or our shareholders may demand compensation from the individual associated with the infringement as provided under law, and reparation for damages. We believe that we have complied with the requirements of Article 146 in all transactions with related parties.

It is our policy that all cash inflows and outflows of our Chilean subsidiaries be managed through our centralized cash management policy. It is a common practice in Chile to transfer surplus funds from one company to another affiliate that has a cash deficit. These transfers are carried out through either short-term loans or through structured inter-company loans. Under Chilean laws and regulations, such transactions must be carried out on an arm's-length basis. Our centralized cash management is more efficient for both financial and tax reasons. All of these transactions are subject to the supervision of our Directors' Committee. As of December 31, 2014, these transactions were priced at TIP (a Chilean variable interest rate) plus 0.05% per month.

In other countries in which we do business, these inter-company transactions are permitted, but they have adverse tax consequences. Accordingly, we do not similarly manage the cash flows of our non-Chilean subsidiaries.

Our subsidiary, Endesa Chile, has received structured loans from us and its related parties in Chile, primarily to satisfy working capital needs. As of December 31, 2014, the outstanding net balance for such loans was Ch\$ 173 billion (of which Ch\$ 132 billion or US\$ 218 million was denominated in US\$), at a weighted average interest rate of 1.4% annually. The largest amounts outstanding during 2014 and 2013 were Ch\$ 280 billion and Ch\$ 329 billion, respectively.

During the three-year period ended December 31, 2014, Endesa Chile has granted only one loan to a foreign subsidiary, Costanera, at a spread of 6.0% over LIBOR. This loan ended in November 2013, because it was contributed to Costanera in connection with its capital increase.

Our ESM, held on November 25, 2014 approved the purchase of US\$ 102 million (Ch\$ 61 billion using the U.S. dollar Observed Exchange Rate of Ch\$ 597.89 per US\$ 1.00 on the date of the transaction) of debt held by Enel Latinoamérica against Dock Sud for US\$ 29 million (Ch\$ 17.3 billion, using the aforementioned conversion rate) and its subsequent conversion to Chilean pesos. On December 1, 2014, Ch\$ 6.1 billion of this debt was repaid to us by Dock Sud and the remaining principal was converted to equity, and forgave all accrued and unpaid interest. The other shareholders of Dock Sud (YPF and Pan American Energy) also converted principal of the debts they had with Dock Sud into equity and forgave the accrued and unpaid interest.

During 2014, we made two structured loans to Endesa Chile, primarily to finance projects. As of December 31, 2014, the outstanding net balance for such loans was Ch\$ 61 billion, composed of a Ch\$ 29 billion loan with a fixed interest rate of 4.97% and a second loan for Ch\$ 32 billion at a fixed interest rate of 0.95%.

As of the date of this Report, the abovementioned transactions have not experienced material changes. For more information regarding transactions with related parties, refer to Note 10 of the Notes to our consolidated financial statements.

C. Interests of Experts and Counsel.

Not applicable.

Item 8. Financial Information

A. Consolidated Statements and Other Financial Information.

See "Item 18. Financial Statements."

Legal Proceedings

We and our subsidiaries are parties to legal proceedings arising in the ordinary course of business. We believe it is unlikely that any loss associated with pending lawsuits will significantly affect the normal development of our business.

For detailed information as of December 31, 2014 on the status of the material pending lawsuits that have been filed against us and our subsidiaries, please refer to Note 36.3 of the Notes to our consolidated financial statements. In relation to the legal proceedings reported in the Notes to our consolidated financial statements, we use the criteria of disclosing lawsuits above a minimum threshold of US\$ 30 million of potential impact to us, and, in some cases, qualitative criteria according to the materiality of the impact in the conduct of our business. The lawsuit status includes a general description, the process status and the estimate of the amount involved in each lawsuit.

Dividend Policy

The Board generally establishes a definitive dividend payable each year, accrued in the prior year, which cannot be less than the legal minimum of 30% of annual net income before negative goodwill amortization. In the meeting held on April 23, 2014, the OSM agreed to distribute a definitive dividend of Ch\$ 329,257,075,000 equivalent to Ch\$ 6.70683 per share accrued in fiscal year 2013. This corresponds to a payout ratio of 50%, based on annual net income before negative goodwill amortization. On January 31, 2014, an interim dividend of Ch\$ 1.42964 per share was paid as part of the definitive dividend, with the remainder of Ch\$ 259,071,983,050 equivalent to Ch\$ 5.27719 per share paid on May 16, 2014. As agreed at a meeting held on February 26, 2015, the Board of Directors will propose the payment of a definitive dividend of Ch\$ 6.21433 per share, accrued in fiscal year 2014, equal to a payout ratio of 50%, based on annual net income before negative goodwill amortization at the April 28, 2015 OSM. On November 25, 2014, the Board of Directors agreed to distribute an interim dividend of Ch\$ 0.83148 per share on January 30, 2015, accrued in fiscal year 2014. The aforementioned interim dividend will be deducted from the definitive dividend to be paid on May 25, 2015. The payment of dividends for fiscal year 2014 is based on the net income filed with the SVS. For further details, see "Item 3. Key Information — A. Selected Financial Data."

In accordance with our current dividend policy, the interim dividend corresponds to 15% of liquid net income as of September 30, 2014. The Board of Directors will propose a definitive dividend payout equal to 50% of the annual net income for fiscal year 2015. Actual dividend payments will be subject to net profits obtained in each period, as well as to expectations of future profit levels and other conditions that may exist at the time of such dividend declaration. The fulfillment of the aforementioned dividend policy will depend on actual 2015 net income. The proposed dividend policy is subject to the Board of Director's prerogative to change the amount and timing of the dividends under the circumstances at the time of the payment.

The payment of dividend is subject to legal restrictions, such as legal reserve requirements, capital and retained earnings criteria, and other contractual restrictions such as the non-default on credit agreements. For example, Costanera, El Chocón and Piura may not pay dividends unless they comply with certain financial covenants. However, these legal restrictions are not currently affecting our ability or any of our subsidiaries to pay dividends. (See "Item 5. Operating and Financial Review and Prospects — B. Liquidity and capital resources" for further detail on our debt instruments).

Stockholders set dividend policies at each subsidiary and affiliate. There are currently no material currency controls which prohibit us from repatriating the dividend payments from its non-Chilean principal subsidiaries and affiliates.

We pay dividends to shareholders of record as of midnight of the fifth business day prior to the payment date. Holders of ADS on the applicable record dates will be entitled to participate in dividends.

Dividends

The table below sets forth, for each of the years indicated, the per share dividend amounts distributed by us in Chilean pesos and the amount of dividends distributed per ADS (one ADS = 50 shares of common stock) in U.S. dollars. See "Item 10. Additional Information — D. Exchange Controls".

Year	Nominal Ch\$ ⁽¹⁾	US\$ per ADS ⁽²⁾
2014	6.71	0.55
2013	4.25	0.41
2012	5.75	0.60
2011	7.45	0.72
2010	4.64	0.50

⁽¹⁾ This chart details dividends actually paid in any given year, and not the dividends accrued in that year. These dividends may have been accrued during the prior year or the same year in which they were paid. These amounts do not reflect reduction for any applicable Chilean withholding tax.

For a discussion of Chilean withholding taxes and access to the formal currency market in Chile in connection with the payment of dividends and sales of ADSs and the underlying common stock, see "Item 10. Additional Information — E. Taxation" and "Item 10. Additional Information — D. Exchange Controls."

B. Significant Changes.

None.

⁽²⁾ The U.S. dollar per ADS amount has been calculated by applying the exchange rate as of December 31 of each year. One ADS = 50 shares of common stock.

Item 9. The Offer and Listing

A. Offer and Listing Details.

Market Price Information

The shares of our common stock currently trade on United States, Chilean and Spanish exchanges.

The table below shows, for the periods indicated, high and low prices in Chilean pesos on the Santiago Stock Exchange, and high and low closing prices of the ADSs in U.S. dollars as reported by the NYSE.

	Exchange	Santiago Stock Exchange ⁽¹⁾ Ch\$ per share		k ;(2)
	Ch\$ per sh			DS
	High	Low	High	Low

⁽¹⁾ Source: Santiago Stock Exchange.

On the last trading day in 2014, our common stock closed at Ch\$ 198.76 per share on the Santiago Stock Exchange and our ADS closed at US\$ 16.03 on the NYSE.

On March 31, 2015, our common stock closed at Ch\$ 204.32 per share on the Santiago Stock Exchange and our ADS closed at US\$ 16.26 on the NYSE.

⁽²⁾ Source: NYSENET. Our ADS composite figures include transactions in all U.S. stock exchanges. One ADS = 50 shares of common stock.

C. Markets.

Shares of our common stock have traded in the United States, our primary market, in the form of ADSs on the NYSE and Over the Counter ("OTC") markets since October 1993, under the ticker symbol "ENI". Each ADS represents 50 shares of common stock, with the ADSs in turn evidenced by American Depositary Receipts ("ADRs"). The ADRs are outstanding under the Third Amended and Restated Deposit Agreement dated as of March 28, 2013 among us, Citibank, N.A. as Depositary, and the holders and beneficial owners from time to time of ADRs issued thereunder. Only persons in whose names ADRs are registered on the books of the Depositary are treated by the Depositary as owners of ADRs.

As of March 31, 2015, ADRs evidencing 103,192,813ADSs (equivalent to 5,159,640,650 shares of common stock) were outstanding, representing 10.45 % of the total number of outstanding shares. It is not practicable for us to determine the proportion of ADSs beneficially owned by U.S. final beneficial holders. Trading volume of our shares on the NYSE and other exchanges during 2014 amounted to approximately 149 million ADSs, which in turn was equivalent to US\$ 2,338 million.

The NYSE is open for trading Monday through Friday from 9:30 am to 4:00 pm, with the exception of holidays declared by the NYSE in advance. On the trading floor, the NYSE trades in a continuous auction format, where traders can execute stock transactions on behalf of investors. Specialist brokers act as auctioneers in an open outcry auction market to bring buyers and sellers together and to manage the actual auction. Customers can also send orders for immediate electronic execution or route orders to the floor for trade in the auction market. The NYSE works with U.S. regulators like the Securities and Exchange Commission ("SEC") and the Commodity Futures Trading Commission ("CFTC") to coordinate risk management measures in the electronic trading environment through the implementation of mechanisms like circuit breakers and liquidity replenishment points.

In Chile, our common stock is traded on three stock exchanges: the Santiago Stock Exchange, the Electronic Stock Exchange and the Valparaíso Stock Exchange. The largest exchange in the country, the Santiago Stock Exchange, was established in 1893 as a private company. Its equity consists of 48 shares as of the date of this Report. As of December 31, 2014, 230 companies had shares listed on the Santiago Stock Exchange. For the year ended 2014, the Santiago Stock Exchange accounted for 91.03% of our total equity traded in Chile and amounted to 6,155,046,622 shares. In addition, approximately 8.97% of our equity trading was conducted on the Electronic Stock Exchange, an electronic trading market that was created by banks and non-member brokerage houses, and 0.001% was traded on the Valparaíso Stock Exchange.

Equities, closed-end funds, fixed-income securities, short-term and money market securities, gold and U.S. dollars are traded on the Santiago Stock Exchange. The Santiago Stock Exchange also trades U.S. dollar futures and stock index futures. Securities are traded primarily through an open voice auction system; a firm offers system or the daily auction. Trading through the open voice system occurs on each business day from 9:30 a.m. to 4:00 p.m., during local standard time, and from 9:30 a.m. to 5:00 p.m. during daylight savings time (usually from November to March), which differs from New York City time by up to two hours, depending on the season. The Santiago Stock Exchange has an electronic trading system called *Telepregón*, which operates continuously from 9:30 a.m. to 4:00 p.m. during local standard time, and from 9:00 a.m. to 5:00 p.m. during daylight savings time, on each business day. During local standard time, electronic auctions may be conducted four times a day, at 10:30 a.m., 11:30 a.m., 1:30 p.m., and 3:30 p.m. During daylight savings time there is an additional electronic auction at 4:30 p.m. More than 99% of the auctions and transactions take place electronically.

There are two share price indexes on the Santiago Stock Exchange, the General Shares Price Index, or IGPA, and the Selected Shares Price Index, or IPSA. The IGPA is calculated using the prices of shares that are traded at least 5% of the trading days of a year, with a total annual transactions exceeding UF 10,000 (Ch\$ 246 million as of December 31, 2014, equivalent to US\$ 0.41 million) and a free float representing at least 5% of the capital. The IPSA is calculated using the prices of the 40 shares with highest amounts traded, on a quarterly basis, and with a market capitalization above US\$ 200 million. The shares included in the IPSA and IGPA are weighted according to the weighted value of the shares traded. We have been included in the IPSA since 1988, while Endesa Chile has been included since its privatization process in 1987.

Our shares were first listed and began trading on the *Bolsa de Valores Latinoaméricanos de la Bolsa de Madrid* ("Latibex"), as of December 2001, under the ticker symbol "XENI". Until April 2011, the trading unit represented 50 shares of common stock (the same unit conversion of 50:1 as an ADS), but since May 2011 the equivalence changed to a 1:1 ratio. Santander Investment S.A. acts as the liaison entity, and Banco Santander-Chile as the Depositary Bank in Chile. Trading volume of our shares on the Latibex during 2014 amounted to approximately 11.2 million units, which in turn was equivalent to € 2.6 million. The stock closed at € 0.23 on the last 2014 trading day.

The following table contains information regarding the amount of total traded shares of common stock and the corresponding percentage traded per market during 2014:

	Number of shares of	
	common stock traded	Percentage
Market		
United States (One ADS = 50 shares of common stock) ⁽¹⁾	7,446,917,800	52.4%
Chile ⁽²⁾	6,761,320,331	47.5%
Spain ⁽³⁾	11,169,495	0.1%
Total	14,219,407,626	100%

- (1) Includes the New York Stock Exchange and over-the-counter trading.
- (2) Includes Santiago Stock Exchange, Electronic Stock Exchange and Valparaíso Stock Exchange.
- (3) Latibex.

B. Memorandum and Articles of Association.

Description of Share Capital

Set forth below is certain information concerning our share capital and a brief summary of certain significant provisions of Chilean law and our bylaws.

General

Shareholders' rights in Chilean companies are governed by the company's bylaws (*Estatutos*), which have the same purpose as the articles or the certificate of incorporation and the bylaws of a company incorporated in the United States, and by Law 18,046 (the Chilean Companies Act). In addition, D.L. 3500, or the Pension Funds' System Law, which permits the investment by Chilean pension funds in stock of qualified companies, indirectly affects corporate governance and prescribes certain rights of shareholders. In accordance with the Chilean Companies Act, legal actions by shareholders to enforce their rights as shareholders of the company must be brought in Chile in arbitration proceedings or, at the option of the plaintiff, before Chilean courts. Members of the Board of Directors, managers, officers and principal executives of the company, or shareholders that individually own shares with a book value or stock value higher that UF 5,000 (Ch\$ 123 million as of December 31, 2014) do not have the option to bring the procedure to the courts.

The Chilean securities markets are principally regulated by the Superintendency of Securities and Insurance (SVS) under Securities Market Law No18,045 and the Chilean Companies Act. These two laws state the disclosure requirements, restrictions on insider trading and price manipulation, and provide protection to minority shareholders. The Securities Market Law sets forth

requirements for public offerings, stock exchanges and brokers, and outlines disclosure requirements for companies that issue publicly offered securities. The Chilean Companies Act and the Securities Market Law, both as amended, state rules regarding takeovers, tender offers, transactions with related parties, qualified majorities, share repurchases, directors' committee, independent directors, stock options and derivative actions.

Public Register

We are a publicly held stock corporation incorporated under the laws of Chile. We were constituted by public deed issued on June 19, 1981 by the Santiago Notary Public, Mr. Patricio Zaldívar M. Our existence was approved by SVS Resolution 409-S of July 17, 1981 and we were registered on July 21, 1981 in the Commercial Registrar (*Registro de Comercio del Conservador de Bienes Raíces y Comercio de Santiago*), on pages 13099 No. 7269. We are registered with the SVS under the entry number 0175. We are also registered with the United States Securities and Exchange Commission under the commission file number 001-12440.

Reporting Requirements Regarding Acquisition or Sale of Shares

Under Article 12 of the Securities Market Law and General Rule 269 of the SVS, certain information regarding transactions in shares of a publicly held stock corporation or in contracts or securities whose price or results depend on, or are conditioned in whole or in part on the price of such shares, must be reported to the SVS and the Chilean stock exchanges. Since ADSs are deemed to represent the shares of common stock underlying the ADRs, transactions in ADRs will be subject to these reporting requirements and those established in Circular 1375 of the SVS. Shareholders of publicly held stock corporations are required to report to the SVS and the Chilean stock exchanges:

- any direct or indirect acquisition or sale of shares made by a holder who owns, directly or indirectly, at least 10% of a publicly held stock corporation's subscribed capital;
- any direct or indirect acquisition or sale of contracts or securities whose price or results depend on or are conditioned in whole
 or in part on the price of shares made by a holder who owns, directly or indirectly, at least 10% of a publicly held stock
 corporation's subscribed capital;
- any direct or indirect acquisition or sale of shares made by a holder who, due to an acquisition of shares of such publicly held stock company, results in the holder acquiring, directly or indirectly, at least 10% of a publicly held stock company's subscribed capital; and
- any direct or indirect acquisition or sale of shares in any amount, made by a director, receiver, principal executive, general
 manager or manager of a publicly held stock company.

In addition, majority shareholders of a publicly held stock corporation must inform the SVS and the Chilean stock exchanges if such transactions are entered into with the intention of acquiring control of the company or if they are making a passive financial investment instead.

Under Article 54 of the Securities Market Law and General Rule 104 enacted by the SVS, any person who directly or indirectly intends to take control of a publicly held stock corporation must disclose this intent to the market at least ten business days in advance of the proposed change of control and, in any event, as soon as the negotiations for the change of control have taken place or reserved information of the publicly held stock corporation has been provided.

Corporate Objectives and Purposes

Article 4 of our bylaws states that our corporate objectives and purposes are, among other things, to conduct the exploration, development, operation, generation, distribution, transmission, transformation, or sale of energy in any form, directly or through other companies, as well as to provide engineering-consultancy services related to these objectives, in Chile and abroad and to participate in the telecommunications business.

Board of Directors

Our Board of Directors consists of seven members who are appointed by shareholders at the OSM and are elected for a three year term, at the end of which they will be re-elected or replaced.

The seven directors elected at the OSM are the seven individual nominees who receive the highest majority of the votes. Each shareholder may vote his shares in favor of one nominee or may apportion his shares among any number of nominees.

The effect of these voting provisions is to ensure that a shareholder owning more than 12.5% of our shares is able to elect a member of the Board.

The compensation of the directors is set annually at the OSM. See "Item 6. Directors, Senior Management and Employees — B. Compensation."

Agreements entered into by us with related parties can only be executed when such agreements serve our interest, and their price, terms and conditions are consistent with prevailing market conditions at the time of their approval and comply with all the requirements and procedures indicated in Article 147 of the Chilean Companies Act.

Certain Powers of the Board of Directors

Our bylaws provide that every agreement or contract that we enter into with our controlling shareholder, our directors or executives, or with our related parties, must be previously approved by two thirds of the Board of Directors and be included in the Board meetings, and must comply with the provisions of the Chilean Companies Act.

Our bylaws do not contain provisions relating to:

- the directors' power, in the absence of an independent quorum, to vote on compensation for themselves or any members of their body;
- borrowing powers exercisable by the directors and how such borrowing powers can be varied;
- · retirement or non-retirement of directors under an age limit requirement; or
- number of shares, if any, required for directors' qualification.

Certain Provisions Regarding Shareholder Rights

As of the date of the filing of this Report, our capital is comprised of only one class of shares, all of which are ordinary shares and have the same rights.

Our bylaws do not contain any provisions relating to:

- redemption provisions;
- sinking funds; or
- liability for capital calls by us.

Under Chilean law, the rights of our stockholders may only be modified by an amendment to the bylaws that complies with the requirements explained below under "Item 10. Additional Information — B. Memorandum and Articles of Association. — Shareholders' Meetings and Voting Rights."

Capitalization

Under Chilean law, only the shareholders of a company acting at an ESM have the power to authorize a capital increase. When an investor subscribes for shares, these are officially issued and registered under his name, and the subscriber is treated as a shareholder for all purposes, except receipt of dividends and for return of capital in the event that the shares have been subscribed but not paid for. The subscriber becomes eligible to receive dividends only for the shares that he has actually paid for or, if the subscriber has paid for only a portion of such shares, the pro rata portion of the dividends declared with respect to such shares unless the company's bylaws provide otherwise. If a subscriber does not fully pay for shares for which the subscriber has subscribed on or prior to the date agreed upon for payment, notwithstanding the actions intended by the company to collect payment, the company is entitled to auction the shares on the stock exchange where such shares are traded, for the account and risk of the debtor, the number of shares held by the debtor necessary for the company to pay the outstanding balances and disposal expenses. However, until such shares are sold at auction, the subscriber continues to hold all the rights of a shareholder, except the right to receive dividends and return of capital. The chief executive officer or the person replacing him will reduce in the shareholders' register the number of shares in the name of the debtor shareholder to the number of shares that remain, deducting the shares sold by the company and settling the debt in the amount necessary to cover the result of such disposal after the corresponding expenses. When there are authorized and issued

shares for which full payment has not been made within the period fixed by shareholders at the same ESM at which the subscription was authorized (which in no case may exceed three years from the date of such meeting), these shall be reduced in the non-subscribed amount until that date. With respect to the shares subscribed and not paid following the term mentioned above, the Board must proceed to collect payment, unless the shareholders' meeting authorizes (by two thirds of the voting shares) a reduction of the company's capital to the amount effectively collected, in which case the capital shall be reduced by force of law to the amount effectively paid. Once collection actions have been exhausted, the Board should propose to the shareholders' meeting the approval by simple majority of the write-off of the outstanding balance and the reduction of capital to the amount effectively recovered.

As of December 31, 2014, our subscribed and fully paid capital totaled Ch\$ 5,804 billion and consisted of 49,092,772,762 shares.

Preemptive Rights and Increases of Share Capital

The Chilean Companies Act requires Chilean companies to grant shareholders preemptive rights to purchase a sufficient number of shares to maintain their existing ownership percentage of such company whenever such company issues new shares.

Under Chilean law, preemptive rights are exercisable or freely transferable by shareholders during a 30-day period following the day the capital increase is made public. The options to subscribe for shares in capital increases of the company or of any other securities convertible into shares or that confer future rights over these shares, should be offered, at least once, to the shareholders pro rata to the shares held registered in their name at midnight on the fifth business day prior to the date of the start of the preemptive rights period. The preemptive rights offering and the start of the 30-day period for exercising them shall be communicated through the publication of a prominent notice, at least once, in the newspaper that should be used for notifications of shareholders' meetings. During such 30-day period, and for an additional period of up to 30-days immediately following the initial 30-day period, publicly held stock corporations are not permitted to offer any unsubscribed shares to third parties on terms which are more favorable than those offered to their shareholders. At the end of the second 30-day period, a Chilean publicly held stock corporation is authorized to sell non-subscribed shares to third parties on any terms, provided they are sold on one of the Chilean stock exchanges.

Shareholders' Meetings and Voting Rights

An OSM must be held within the first four months following the end of our fiscal year. The last OSM was held on April 23, 2014. An ESM may be called by the Board of Directors when deemed appropriate, or when requested by shareholders representing at least 10% of the issued shares with voting rights, or by the SVS. To convene an OSM or an ESM, notice must be given three times in a newspaper located in our corporate domicile. The newspaper designated by our shareholders is El Mercurio de Santiago. The first notice must be published not less than 15-days and no more than 20-days in advance of the scheduled meeting. Notice must also be mailed to each shareholder, to the SVS and to the Chilean stock exchanges.

The OSM shall be held on the day stated in the notice and should remain in session until having exhausted all the matters stated in the notice. However, once constituted, upon the proposal of the chairman or shareholders representing at least 10% of the shares with voting rights, the majority of the shareholders present may agree to suspend it and to continue it within the same day and place, with no new constitution of the meeting or qualification of powers being necessary, recorded in one set of minutes. Only those shareholders who were present or represented may attend the recommencement of the meeting with voting rights.

Under Chilean law, a quorum for a shareholders' meeting is established by the presence, in person or by proxy, of shareholders representing at least a majority of the issued shares with voting rights of a company. If a quorum is not present at the first meeting, a reconvened meeting can take place at which the shareholders present are deemed to constitute a quorum regardless of the percentage of the shares represented. The second meeting must take place within 45-days following the scheduled date for the first meeting. Shareholders' meetings adopt resolutions by the affirmative vote of a majority of those shares present or represented at the meeting. An ESM must be called to take the following actions:

- a transformation of the company into a form other than a publicly held stock corporation under the Chilean Companies Act, a merger or split-up of the company;
- an amendment to the term of duration or early dissolution of the company;
- a change in the company's domicile;
- a decrease of corporate capital;
- an approval of capital contributions in kind and non-monetary assessments;

- a modification of the authority reserved to shareholders or limitations on the Board of Directors;
- a reduction in the number of members of the Board of Directors;
- a disposition of 50% or more of the assets of the company, whether it includes disposition of liabilities or not, as well as the approval or the amendment of the business plan which contemplates the disposition of assets in an amount greater that such percentage;
- the disposition of 50% or more of the assets of a subsidiary, as long as such subsidiary represents at least 20% of the assets of the corporation, as well as any disposition of its shares that results in the parent company losing its position as controller;
- the form of distributing corporate benefits;
- issue of guarantees for third-party liabilities which exceed 50% of the assets, except when the third party is a subsidiary of the company, in which case approval of the Board of Directors is deemed sufficient;
- the purchase of the company's own shares;
- other actions established by the bylaws or the laws;
- certain remedies for the nullification of the company's bylaws;
- inclusion in the bylaws of the right to purchase shares from minority shareholders, when the controlling shareholders reaches 95% of the company's shares by means of a tender offer for all of the company's shares, where at least 15% of the shares have been acquired from unrelated shareholders; and
- approval or ratification of acts or contracts with related parties.

Regardless of the quorum present, the vote required for any of the actions above is at least two-thirds of the outstanding shares with voting rights.

Bylaw amendments for the creation of a new class of shares, or an amendment to or an elimination of those classes of shares that already exist, must be approved by at least two-thirds of the outstanding shares of the affected series.

Chilean law does not require a publicly held stock corporation to provide its shareholders the same level and type of information required by the securities laws regarding the solicitation of proxies. However, shareholders are entitled to examine the financial statements of a publicly held stock corporation within the 15-day period before its scheduled OSM. Under Chilean law, a notice of a shareholders meeting listing matters to be addressed at the meeting must be mailed at least 15 days prior to the date of such meeting, and, an indication of the way complete copies of the documents that support the matters submitted for voting can be obtained, which must also be made available to shareholders on our website. In the case of an OSM, our annual report of activities, which includes audited financial statements, must also be made available to shareholders and published on our website at: www.enersis.cl.

The Chilean Companies Act provides that, upon the request by the Directors' Committee or by shareholders representing at least 10% of the issued shares with voting rights, a Chilean company's annual report must include, in addition to the materials provided by the Board of Directors to shareholders, such shareholders' comments and proposals in relation to the company's affairs. In accordance with Article 136 of the Chilean Companies Regulation ("Reglamento de Sociedades Anónimas"), the shareholder(s) holding or representing 10% or more of the shares issued with voting rights, may:

- make comments and proposals relating to the progress of the corporate businesses in the corresponding year, no shareholder being able to make individually or jointly more than one presentation. These observations should be presented in writing to the company concisely, responsibly and respectfully, and the respective shareholder(s) should state their willingness for these to be included as an appendix to the annual report. The board shall include in an appendix to the annual report of the year a faithful summary of the pertinent comments and proposals the interested parties had made, provided they are presented during the year or within 30-days after its ending; or
- make comments and proposals on matters that the board submits for the knowledge or voting of the shareholders. The board shall
 include a faithful summary of those comments and proposals in all information it sends to shareholders, provided the
 shareholders' proposal is received at the offices of the company at least 10-days prior to the date of dispatch

of the information by the company. The shareholders should present their comments and proposals to the company, expressing their willingness for these to be included in the appendix to the respective annual report or in information sent to shareholders, as the case may be. The observations referred to in this Article may be made separately by each shareholder holding 10% or more of the shares issued with voting rights or shareholders who together hold that percentage, who should act as one.

Similarly, the Chilean Companies Act provides that whenever the Board of Directors of a publicly held stock corporation convenes an OSM and solicits proxies for the meeting, or circulates information supporting its decisions or other similar material, it is obligated to include the pertinent comments and proposals that may have been made by the Directors' Committee or by shareholders owning 10% or more of the shares with voting rights who request that such comments and proposals be so included.

Only shareholders registered as such with us, as of 11:59 p.m. on the fifth business day prior to the date of a meeting, are entitled to attend and vote their shares. A shareholder may appoint another individual, who does not need to be a shareholder, as his proxy to attend the meeting and vote on his behalf. Proxies for such representation shall be given for all the shares held by the owner. The proxy may contain specific instructions to approve, reject, or abstain with respect to any of the matters submitted for voting at the meeting and which were included in the notice. Every shareholder entitled to attend and vote at a shareholders' meeting shall have one vote for every share subscribed.

There are no limitations imposed by Chilean law or our bylaws on the right of nonresidents or foreigners to hold or vote shares of common stock. However, the registered holder of the shares of common stock represented by ADSs, and evidenced by outstanding ADSs, is the custodian of the Depositary, currently Banco Santander-Chile, or any successor thereto. Accordingly, holders of ADSs are not entitled to receive notice of meetings of shareholders directly or to vote the underlying shares of common stock represented by ADS directly. The Deposit Agreement contains provisions pursuant to which the Depositary has agreed to solicit instructions from registered holders of ADSs as to the exercise of the voting rights pertaining to the shares of common stock represented by the ADSs. Subject to compliance with the requirements of the Deposit Agreement and receipt of such instructions, the Depositary has agreed to endeavor, insofar as practicable and permitted under Chilean law and the provisions of the bylaws, to vote or cause to be voted (or grant a discretionary proxy to the Chairman of the Board of Directors or to a person designated by the Chairman of the Board of Directors to vote) the shares of common stock represented by the ADSs in accordance with any such instruction. The Depositary shall not itself exercise any voting discretion over any shares of common stock underlying ADSs. If no voting instructions are received by the Depositary from a holder of ADSs with respect to the shares of common stock represented by the ADSs, on or before the date established by the Depositary for such purpose, the shares of common stock represented by the ADS, may be voted in the manner directed by the Chairman of the Board, or by a person designated by the Chairman of the Board, subject to limitations set forth in the Deposit Agreement.

Dividends and Liquidation Rights

According to the Chilean Companies Act, unless otherwise decided by unanimous vote of its issued shares eligible to vote, all companies must distribute a cash dividend in an amount equal to at least 30% of their consolidated net income, before amortization and negative goodwill for each year (calculated according to the local accounting rules applicable to us when preparing financial statements to be submitted to the SVS), unless and except to the extent we have carried forward losses. The law provides that the Board of Directors must agree to the dividend policy and inform such policy to the shareholders at the OSM.

Any dividend in excess of 30% of net income may be paid, at the election of the shareholder, in cash, or in our shares, or in shares of publicly held corporations owned by us. Shareholders who do not expressly elect to receive a dividend other than in cash are legally presumed to have decided to receive the dividend in cash.

Dividends which are declared but not paid within the appropriate time period set forth in the Chilean Companies Act (as to minimum dividends, 30-days after declaration; as to additional dividends, the date set for payment at the time of declaration) are adjusted to reflect the change in the value of UF, from the date set for payment to the date such dividends are actually paid. Such dividends also accrue interest at the then-prevailing rate for UF-denominated deposits during such period. The right to receive a dividend lapses if it is not claimed within five years from the date such dividend is payable. Payments not collected in such period are transferred to the volunteer Fire Department.

In the event of our liquidation, the shareholders would participate in the assets available in proportion to the number of paid-in shares held by them, after payment to all creditors.

Approval of Financial Statements

The Board of Directors is required to submit our consolidated financial statements to the shareholders annually for their approval. If the shareholders by a vote of a majority of shares present (in person or by proxy) at the shareholders' meeting reject the financial statements, the Board of Directors must submit new financial statements no later than 60-days from the date of such meeting. If the shareholders reject the new financial statements, the entire Board of Directors is deemed removed from office and a new board is elected at the same meeting. Directors who individually approved such financial statements are disqualified for reelection for the following period. Our shareholders have never rejected the financial statements presented by the Board of Directors.

Change of Control

The Capital Markets Law establishes a comprehensive regulation related to tender offers. The law defines a tender offer as the offer to purchase shares of companies which publicly offer their shares or securities convertibles into shares and which offer is made to shareholders to purchase their shares under conditions which allow the bidder to reach a certain percentage of ownership of the company within a fixed period of time. These provisions apply to both voluntary and hostile tender offers.

Acquisition of Shares

There are no provisions in our bylaws that discriminate against any existing or prospective holder of shares as a result of such shareholder owning a substantial number of shares. However, no person may directly or indirectly own more than 65% of the outstanding shares of our stock. The foregoing restriction does not apply to the depositary as record owner of shares represented by ADRs, but it does apply to each beneficial ADS holder. Additionally, our bylaws prohibit any shareholder from exercising voting power with respect to more than 65% of the common stock owned by such shareholder or on behalf of others representing more than 65% of the outstanding issued shares with voting rights.

Right of Dissenting Shareholders to Tender Their Shares

The Chilean Companies Act provides that upon the adoption of any of the resolutions enumerated below at a meeting of shareholders, dissenting shareholders acquire the right to withdraw from the company and to compel the company to repurchase their shares, subject to the fulfillment of certain terms and conditions. In order to exercise such withdrawal rights, holders of ADRs must first withdraw the shares represented by their ADRs pursuant to the terms of the deposit agreement.

"Dissenting" shareholders are defined as those who at a shareholders' meeting vote against a resolution that results in the withdrawal right, or who if absent from such meeting, state in writing their opposition to the respective resolution, within the 30-days following the shareholders' meeting. Shareholders present or represented at the meeting and who abstain in exercising their voting rights shall not be considered as dissenting. The right to withdraw should be exercised for all the shares that the dissenting shareholder had registered in their name on the date on which the right is determined to participate in the meeting at which the resolution is adopted that motivates the withdrawal and which remains on the date on which their intention to withdraw is communicated to the company. The price paid to a dissenting shareholder of a publicly held stock corporation whose shares are quoted and actively traded on one of the Chilean stock exchanges, is the greater of (i) the weighted average of the sales prices for the shares as reported on the Chilean stock exchanges on which the shares are quoted for the two-month period between the ninetieth and the thirtieth day before the shareholders' meeting giving rise to the withdrawal right, and (ii) the market price resulting from the average price of transactions on such day. If, because of the volume, frequency, number and diversity of the buyers and sellers, the SVS determines that the shares are not actively traded on a stock exchange, the price paid to the dissenting shareholder shall be the book value. Book value for this purpose shall equal paid capital plus reserves and profits, less losses, divided by the total number of subscribed shares, whether entirely or partially paid. For the purpose of making this calculation, the last consolidated statements of financial position is used, as adjusted to reflect inflation up to the date of the shareholders' meeting which gave rise to the withdrawal right.

Article 126 of the Chilean Companies Regulation establishes that in cases where the right to withdraw arises, the company shall be obliged to inform the shareholders of this situation, the value per share that will be paid to shareholders exercising their right to withdraw and the term for exercising it. Such information should be given to shareholders at the same meeting at which the resolutions are adopted giving rise to the right of withdrawal, prior to its voting. A special communication should be given to the shareholders with rights, within two days following the date on which the rights to withdraw are born. In the case of publicly held companies, such information shall be communicated by a prominent notice in a newspaper with a wide national circulation and on its web site, plus a written communication addressed to the shareholders with rights at the address they have registered with the company. The notice of the shareholders meeting that should pronounce on a matter that could originate withdrawal rights should mention this circumstance.

The resolutions that result in a shareholder's right to withdraw include, among others, the following:

- the transformation of the company into an entity which is not a publicly held stock corporation governed by Chilean Companies Act;
- the merger of the company with another company;
- disposition of 50% or more of the assets of the company, whether it includes disposition of liabilities or not, as well as the approval or the amendment of the business plan which contemplates the disposition of assets in an amount greater than such percentage;
- the disposition of 50% or more of the assets of a subsidiary, as long as such subsidiary represents at least 20% of the assets of the company, as well as any disposition of its shares that results in the parent company losing its position of controller;
- issue of guarantees for third parties' liabilities which exceed 50% of the assets (if the third party is a subsidiary of the company, the approval of the Board of Directors is sufficient);
- the creation of preferential rights for a class of shares or an amendment to the existing ones. In this case the right to withdraw only accrues to the dissenting shareholders of the class or classes of shares adversely affected;
- · certain remedies for the nullification of the corporate bylaws; and
- such other causes as may be established by the law or by the company's bylaws.

Investments by AFPs

The Pension Funds' System Law permits AFPs to invest their funds in companies that are subject to Title XII and, subject to greater restrictions than other companies. The determination of which stocks may be purchased by AFPs is made by the Risk Classification Committee. The Risk Classification Committee establishes investment guidelines and is empowered to approve or disapprove those companies that are eligible for AFP investments. Except for the period from March 2003 to March 2004, we have been a Title XII Company since 1985 and we are approved by the Risk Classification Committee.

Title XII companies are required to have bylaws that: limit the ownership of any shareholder to a specified maximum percentage, require that certain actions be taken only at a meeting of the shareholders, and give the shareholders the right to approve certain investment and financing policies.

Registrations and Transfers

Shares issued by us are registered with an administrative agent named *DCV Registros S.A*. This entity is also responsible for our shareholders registry. In case of jointly-owned shares, an attorney-in-fact must be appointed to represent the joint owners in dealing with us.

C. Material Contracts.

None.

D. Exchange Controls.

The Central Bank of Chile is responsible for, among other things, monetary policies and exchange controls in Chile. Currently applicable foreign exchange regulations are set forth in the Compendium of Foreign Exchange Regulations (the "Compendium") approved by the Central Bank of Chile in 2002. Appropriate registration of a foreign investment in Chile permits the investor access to the Formal Exchange Market. Foreign investments can be registered with the Foreign Investment Committee under D.L. 600 of 1974 or can be registered with the Central Bank of Chile under the Central Bank Act, Law 18840 of October 1989.

a) Foreign Investments Contracts and Chapter XXVI

In connection with our initial public offering of ADS in 1993, we entered into a foreign investment contract (the "Foreign Investment Contract") with the Central Bank of Chile and the Depositary, pursuant to Article 47 of the Central Bank Act and Chapter XXVI of the former Compendium of Foreign Exchange Regulations ("Chapter XXVI"), which governed the issuance of ADS by a Chilean company. Pursuant to the Foreign Investment Contract, the foreign exchange for payments and distributions with respect to the ADS, could be purchased in either the Formal Exchange Market or the Informal Exchange Market, but such payments needed to be remitted through the Formal Exchange Market.

As of April 19, 2001, Chapter XXVI was eliminated and new investments in ADSs by non-residents of Chile are now governed instead by Chapter XIV of the Compendium. This change was made with the purpose of simplifying and facilitating the flow of capital to and from Chile. As a result of the elimination of Chapter XXVI, access to the Formal Exchange Market is no longer assured. However, because our Foreign Investment Contract was entered into pursuant to Chapter XXVI, the principles of Chapter XXVI were still applied until the most recent 2013 capital increase was carried out.

Currently, and since the issuance of new shares in connection with the 2013 capital increase, all existing shareholders (and ADS holders) lost the benefits of the Foreign Investment Contracts and Chapter XXVI, including guaranteed access to the Formal Exchange Market. The newly issued securities and the current common stock held by non-Chilean residents or domiciles are subject to Chapter XIV of the Central Bank of Chile's Compendium. By mutual agreement, the Central Bank of Chile is no longer a party to the Third Amended and Restated Deposit Agreement that we signed with Citibank, N.A on March 28, 2013. In addition, we ended the exchange agreements signed with the Central Bank of Chile and Citibank N.A by public deed issued on June 3, 2013.

The following is a summary of certain provisions of Chapter XIV that are applicable to all existing shareholders (and ADS holders). This summary does not purport to be complete and is qualified in its entirety by reference to Chapter XIV. Chapter XIV regulates the following type of investments: credits, deposits, investments and equity contributions. A Chapter XIV investor may at any time repatriate an investment made in us upon sale of our shares, and the profits derived therefrom, with no monetary ceiling, subject to the then effective regulations, which must be reported to the Central Bank of Chile.

Except for compliance with tax regulations and some reporting requirements, currently there are no rules in Chile affecting repatriation rights, except that the remittance of foreign currency must be made through a Formal Exchange Market entity. However, the Central Bank of Chile has the authority to change such rules and impose exchange controls.

The Compendium and International Bond Issuances

Chilean issuers may offer bonds issued by the Central Bank of Chile internationally under Chapter XIV, as amended, of the Compendium.

E. Taxation.

Chilean Tax Considerations

The following discussion summarizes material Chilean income and withholding tax consequences to foreign holders arising from the ownership and disposition of shares and ADSs and, to the extent any are issued, rights and ADS rights. The summary that follows does not purport to be a comprehensive description of all of the tax considerations that may be relevant to a decision to purchase, own or dispose of shares or ADSs and rights or ADS rights, if any, and does not purport to deal with the tax consequences applicable to all categories of investors, some of which may be subject to special rules. Holders of shares and ADSs are advised to consult their own tax advisors concerning the Chilean and other tax consequences of the ownership of shares or ADSs.

The summary that follows is based on Chilean law, in effect on the date hereof, and is subject to any changes in these or other laws occurring after such date, possibly with retroactive effect. Under Chilean law, provisions contained in statutes such as tax rates applicable to foreign investors, the computation of taxable income for Chilean purposes and the manner in which Chilean taxes are imposed and collected may be amended only by another law. In addition, the Chilean tax authorities enact rulings and regulations of either general or specific application and interpret the provisions of the Chilean Income Tax Law. Chilean tax may not be assessed retroactively against taxpayers who act in good faith relying on such rulings, regulations and interpretations, but Chilean tax authorities may change their rulings, regulations and interpretations in the future. The discussion that follows is also based, in part, on representations of the depositary, and assumes that each obligation in the Deposit Agreement and any related agreements will be performed in accordance with its terms. As of this date, there is currently no applicable income tax treaty in effect between the United States and Chile. However, in 2010 the United States and Chile signed an income tax treaty that will enter into force once the treaty is ratified by both countries. There can be no assurance that the treaty will be ratified by either country. The following summary assumes that there is no applicable income tax treaty in effect between the United States and Chile.

As used in this Report, the term "foreign holder" means either:

- in the case of an individual holder, a person who is not a resident of Chile; for purposes of Chilean taxation, an individual is resident of Chile if he or she has resided in Chile for more than six months in one calendar year, or a total of more than six months in two consecutive fiscal years; or
- in the case of a legal entity holder, an entity that is not organized under the laws of Chile, unless the shares or ADSs are assigned to a branch, agent, representative or permanent establishment of such entity in Chile.

Taxation of Shares and ADSs

Taxation of Cash Dividends and Property Distributions

General Rule: The following taxation of cash dividends and property distributions applies until 2016. Cash dividends paid with respect to the shares or ADSs held by a foreign holder will be subject to Chilean withholding tax, which is withheld and paid by the company. As described in the example below, the amount of the Chilean withholding tax is determined by applying a 35% rate to a "grossed-up" distribution amount (such amount equal to the sum of the actual distribution amount and the correlative Chilean corporate income tax paid by the issuer), and then subtracting as a credit such correlative Chilean corporate income tax paid by the issuer. For years 2004 through 2010, the Chilean corporate income tax rate was 17%; for 2011 and until 2014 the rate was 20%. In September 2014, a tax reform was enacted (Law 20,780), which, among other topics, progressively increased the corporate income tax ("CIT"). The CIT rate will be adjusted as follows: in 2014 it increased from 20% to 21%; in 2015 it increases to 22.5%; in 2016 it increases to 24%; in 2017, depending on which of the two new alternative systems enacted as part of the 2014 tax reform (discussed below) is chosen, the rate increases to 25% for companies electing the accrued income basis and 25.5% for companies electing the cash basis for shareholders and in 2018 and after it increases to 25% for companies electing the accrued income basis and 27% for companies electing the cash basis for shareholders.

The example below illustrates the effective Chilean withholding tax burden on a cash dividend received by a foreign holder, assuming a Chilean withholding tax base rate of 35%, an effective Chilean corporate income tax rate of 21% and a distribution of 50% of the net income of the company distributable after payment of the Chilean corporate income tax:

Line	Concept and calculation assumptions	Amount
1	Company taxable income (based on Line $1 = 100$)	100.0
2	Chilean corporate income tax : 21% x Line 1	21.0
3	Net distributable income: Line 1 — Line 2	79.0
4	Dividend distributed (50% of net distributable income): 50% of Line 3	39.5
5	Withholding tax: (35% of (the sum of Line 4 and 50% of Line 2)	(17.5)
6	Credit for 50% of Chilean corporate income tax: 50% of Line 2	10.5
7	Net withholding tax: Line 5 + Line 6	(7.0)
8	Net dividend received: Line 4 - Line 7	32.5
9	Effective dividend withholding rate: Line 7 / Line 4	18%

In general, the effective Chilean dividend withholding tax rate, after giving effect to the credit for the Chilean corporate income tax paid by the company, can be computed using the following formula:

Effective Dividend = (Withholding tax rate) - (Chilean corporate income tax rate)
Withholding Tax Rate 1 - (Chilean corporate income tax rate)

Using the rates prevailing until 2014, the Effective Dividend Withholding Rate is

(35%-21%) / (100%-21%) = 18.0%

Dividends are generally assumed to have been paid out of our oldest retained profits for purposes of determining the level of Chilean corporate income tax that was paid by us. For information as to our retained earnings for tax purposes and the tax credit available on the distribution of such retained earnings, see Note 19 of the Notes to our consolidated financial statements.

Under Chilean Income Tax Law, dividend distributions made in property are subject to the same Chilean tax rules as cash dividends. Stock dividends that represent free shares distributed to foreign shareholders as a consequence of a capitalization made on the same corporation are not subject to Chilean taxation.

Exceptions: Despite the aforementioned general rule, there are special circumstances under which a different tax treatment would apply depending on the source of the income or due to special circumstances existing at the date of the dividend distribution. The most common special cases are briefly described below:

- 1) Circumstances where there is no CIT credit against the Chilean withholding tax: These cases are when: (i) profits paid as dividends (following the seniority rule indicated above) exceed a company's taxable income (such dividend distributions in excess of a company's taxable income determined as of December 31 of the distribution's year will be subject to the Chilean withholding tax rate of 35%, without the CIT credit; in relation to the provisional withholding rule applicable on the date of the dividend payment, please see number 3 below); or (ii) the income was not subject to CIT due to an exemption of the Chilean corporate income tax, in which case the foreign holder will be also subject to the Chilean withholding tax rate of 35% without the CIT credit.
- 2) Circumstances where dividends have been imputed to income exempted from all the Chilean income taxes: In these cases, dividends distributed by a company to the foreign holder will not be subject to Chilean withholding tax. Income exempted from Chilean income tax is expressly listed in the Chilean Income Tax Law.
- 3) Circumstances where dividends are subject to a provisional withholding tax: In the event that on the date of the dividend distribution there are no earnings on which income tax has been paid and there are no tax-exempt earnings, a 35% Chilean withholding tax with a provisional 21% Chilean CIT credit is applicable. This provisional 21% Chilean corporate income tax credit granted must be confirmed with the information of a company's taxable income as of December 31 of the year in which the dividend was paid. A company can agree with the foreign holders to withhold a higher amount in order to avoid under withholding of the Chilean withholding tax.
- 4) Circumstances when it is possible to use certain credits in Chile against income taxes paid abroad, or "foreign tax credit": This occurs when dividends distributed by the Chilean company have income generated by companies domiciled in third countries as their source. If that income was subject to withholding tax or corporate income tax in those third countries, such income will have a credit or "foreign tax credit" against corresponding Chilean taxes, which can be proportionally transferred to the shareholders of a Chilean company.

New System in effect starting in 2017

The tax reform released in September 2014 created two alternative mechanisms of shareholder-level income taxation beginning on January 1, 2017: a) accrued income basis (known as attributed-income system in Chile) shareholder taxation and b) cash basis (known as partially-integrated in Chile) shareholder taxation. These two alternative mechanisms must be chosen by companies in an ESM with a minimum 2/3 of shares votes. The selection should be made before the end of 2016. Once the election is made, it will remain in effect for five years. If no regime is selected by the taxpayer, the law states that the default mechanism for foreign shareholders will be the cash basis mechanism (the most similar to the current system).

a) Accrued income basis

Shareholders would be taxed in Chile on income attributed to them as of the end of the tax year in which the income is generated, eliminating the taxable profits fund ledger ("FUT" in its Spanish acronym). These profits would be taxed at the shareholder level whether or not they are distributed. The underlying CIT paid at the entity level may be used by shareholders as a credit to reduce the Chilean shareholder tax. Therefore, the combined total company and shareholder Chilean income tax burden remains at 35%. Future distributions are not subject to taxation.

Taxpayers will be taxed on the income of companies in which they have an interest in the year such income is recognized, regardless of whether actual distributions are made, with the corresponding credit.

Taxation in two stages

• Company: 25% of accrued profits (using the maximum CIT applicable as of 2018)

• Shareholder: 35% of accrued profits (whether or not distributions are received, with 100% credit of the CIT paid, resulting

in an effective tax rate to the shareholder of 10%).

Total Tax Burden: 35%

Progressive CIT tax rate increase: 21% in 2014, 22.5% in 2015, 24% in 2016 and 25% as of 2017.

Advantages:

• CIT Rate of 25% vs. 27% for the cash basis.

• Shareholders are granted 100% credit of taxes paid by a company.

Disadvantages:

• Shareholders are taxed on undistributed profits.

- Shareholders of record must pay tax by December 31st (regardless of having received dividends).
- Complex management for companies.

b) Cash basis

A company pays CIT on its annual result. Foreign and local individual shareholders will only pay in Chile the relevant tax on effective profit distributions and will be allowed to use the tax paid by the distributing company as credit, with certain limitations. Only 65% of the CIT is creditable against and reduces the 35% shareholder-level tax (as opposed to 100% under the current FUT regime and under the accrued income basis). However, if there is a tax treaty in effect with Chile, the CIT is fully creditable against and reduces the 35% shareholder tax.

Taxation in two stages

• Company: 27% of accrued profits (using the maximum CIT applicable from 2018 and forward).

• Shareholder: 35% of cash disbursement (65% of CIT tax is creditable against the shareholder level tax, resulting in an

effective tax rate to the shareholder of 17.5%. However, if the shareholder is a resident of a country with a tax treaty in effect with Chile, CIT tax is fully creditable, resulting in an effective tax rate to the shareholder

of 8%).

Total Tax Burden: 44.45% (35% for residents of countries with tax treaties)

Advantages:

- Shareholders are only taxed on actual distributions.
- Shareholders must pay taxes only if they hold the share on the dividend distribution date.

Disadvantages:

- CIT Rate of 27% vs. 25% for the accrued income basis.
- Only shareholders residing in countries with a tax treaty are granted full CIT credit (others 65%).

Taxation on sale or exchange of ADSs, outside of Chile

Gains obtained by a foreign holder from the sale or exchange of ADSs outside Chile will not be subject to Chilean taxation.

Taxation on sale or exchange of Shares

The Chilean Income Tax Law includes a tax exemption on capital gains arising from the sale of shares of listed companies traded in the stock markets. Although there are certain restrictions, in general terms, the amendment provides that in order to qualify for the capital gain exemption: (i) the shares must be of a publicly held stock corporation with a certain minimum level of trading on a stock exchange; (ii) the sale must be carried out in a Chilean stock exchange, or in a tender offer subject to Chapter XXV of the Chilean Securities Market Law; (iii) the shares which are being sold must have been acquired on a Chilean stock exchange, or in a tender offer subject to Chapter XXV of the Chilean Securities Market Law, or in an initial public offering (due to the creation of a company or to a capital increase), or due to the exchange of convertible bonds; and (iv) the shares must have been acquired after April 19, 2001.

If the shares do not qualify for the above exemption, capital gains on their sale or exchange of shares (as distinguished from sales or exchanges of ADSs representing such shares of common stock) could be subject to two alternative tax regimes: (a) the general tax regime, with a 21% Chilean corporate income tax and a 35% Chilean withholding tax, the former being creditable against the latter; or (b) a 21% Chilean corporate income tax as sole tax regime, when all the following circumstances are met: (i) the sale is made between unrelated parties, (ii) the sale of shares is not a recurrent or habitual activity for the seller and (iii) at least one year has elapsed between the acquisition and the sale of the shares.

The date of acquisition of the ADSs is considered to be the date of acquisition of the shares for which the ADSs are exchanged.

Taxation of Rights and ADS Rights

For Chilean tax purposes and to the extent we issue any rights or ADS rights, the receipt of rights or ADS rights by a foreign holder of shares or ADSs pursuant to a rights offering is a nontaxable event. In addition, there are no Chilean income tax consequences to foreign holders upon the exercise or the lapse of the rights or the ADS rights.

Any gain on the sale, exchange or transfer of any ADS rights by a foreign holder is not subject to taxes in Chile.

Any gain on the sale, exchange or transfer of the rights by a foreign holder is subject to a 35% Chilean withholding tax.

Currently, there are no rights that are outstanding.

Other Chilean Taxes

There is no gift, inheritance or succession tax applicable to the ownership, transfer or disposition of ADSs by foreign holders, but such taxes will generally apply to the transfer at death or by gift of the shares by a foreign holder. There is no Chilean stamp, issue, registration or similar taxes or duties payable by holders of shares or ADSs.

Material U.S. Income Tax Considerations

This discussion is based on the Internal Revenue Code of 1986, as amended (the "Code"), administrative pronouncements, judicial decisions and final, temporary and proposed Treasury regulations, all as of the date hereof. These authorities are subject to change, possibly with retroactive effect. This discussion assumes that the depositary's activities are clearly and appropriately defined so as to ensure that the tax treatment of ADSs will be identical to the tax treatment of the underlying shares.

The following are the material U.S. federal income tax consequences to U.S. Holders (as defined herein) of receiving, owning, and disposing of shares or ADSs, but it does not purport to be a comprehensive description of all of the tax considerations that may be relevant to a particular person's decision to hold such securities and is based on the assumption stated above under "Chilean Tax Considerations" that there is no applicable income tax treaty in effect between the United States and Chile. The discussion applies only if the beneficial owner holds shares or ADSs as capital assets for U.S. federal income tax purposes and it does not describe all of the tax consequences that may be relevant in light of the beneficial owner's particular circumstances. For instance, it does not describe all the tax consequences that may be relevant to:

- · certain financial institutions;
- insurance companies;
- dealers and traders in securities who use a mark-to-market method of tax accounting;

- persons holding shares or ADSs as part of a "straddle" integrated transaction or similar transaction;
- persons whose functional currency for U.S. federal income tax purposes is not the U.S. dollar;
- partnerships or other entities classified as partnerships for U.S. federal income tax purposes;
- persons liable for the alternative minimum tax;
- tax-exempt organizations;
- persons holding shares or ADSs that own or are deemed to own ten percent or more of our stock; or
- persons holding shares or ADSs in connection with a trade or business conducted outside of the United States.

If an entity classified as a partnership for U.S. federal income tax purposes holds shares or ADSs, the U.S. federal income tax treatment of a partner will generally depend on the status of the partner and upon the activities of the partnership. Partnerships holding shares or ADSs and partners in such partnerships should consult their tax advisors as to the particular U.S. federal income tax consequences of holding and disposing of the shares or ADSs.

You are a "U.S. Holder" for purposes of this discussion if you are a beneficial owner of our shares or ADSs and if you are, for U.S. federal income tax purposes:

- a citizen or individual resident of the United States; or
- a corporation, or other entity taxable as a corporation, created or organized in or under the laws of the United States or any political subdivision thereof; or
- an estate, the income of which is subject to U.S. federal income taxation regardless of its source; or
- a trust (i) that validly elects to be treated as a U.S. person for U.S. federal income tax purposes or (ii) if (A) a court within the United States is able to exercise primary supervision over the administration of the trust and (B) one or more U.S. persons have the authority to control all substantial decisions of the trust.

In general, if a beneficial owner owns ADSs, such owner will be treated as the owner of the shares represented by those ADSs for U.S. federal income tax purposes. Accordingly, no gain or loss will be recognized if a beneficial owner exchanges ADSs for the underlying shares represented by those ADSs.

The U.S. Treasury has expressed concerns that parties to whom ADSs are released before shares are delivered to the depositary (prerelease) or intermediaries in the chain of ownership between beneficial owners and the issuer of the security underlying the ADSs may be taking actions that are inconsistent with the claiming of foreign tax credits for beneficial owners of depositary shares. Such actions would also be inconsistent with the claiming of the reduced tax rate, described below, applicable to dividends received by certain non-corporate beneficial owners. Accordingly, the analysis of the creditability of Chilean taxes, and the availability of the reduced tax rate for dividends received by certain non-corporate holders, each described below, could be affected by actions taken by such parties or intermediaries.

This discussion assumes, and we believe, that we are not, and we will not become, a passive foreign investment company, as described below.

Beneficial owners should consult their tax advisors with respect to their particular tax consequences of owning or disposing of shares or ADSs, including the applicability and effect of state, local, non-U.S. and other tax laws and the possibility of changes in tax laws.

Taxation of Distributions

The following discussion is based on the current regime for taxation of cash dividends and distributions applicable in Chile until 2016. For 2017 and later, the U.S. federal income tax treatment will depend on which of the two regimes we elect to adopt. See "— Chilean Tax Considerations — Taxation of shares and ADSs — Taxation of Cash Dividends and Property Distributions" above.

Distributions paid on shares or ADSs other than certain pro rata distributions of shares of common stock will be treated as dividends taxable as ordinary income to the extent paid out of our current or accumulated earnings and profits (as determined under U.S. federal income tax principles). Because we do not maintain calculations of our earnings and profits under U.S. federal income tax principles, it is expected that distributions generally will be reported as dividends.

If a beneficial owner is a U.S. Holder, subject to applicable limitations and the discussion above regarding concerns expressed by the U.S. Treasury, dividends paid by qualified foreign corporations to the beneficial owner that is not a corporation are taxable at a maximum rate of 20%. A foreign company is treated as a qualified foreign corporation with respect to dividends paid on stock that is readily tradable on an established securities market in the United States, such as the New York Stock Exchange where our ADSs are traded. Beneficial owners should consult their tax advisors to determine whether the favorable rate will apply to dividends they receive and whether they are subject to any special rules that limit their ability to be taxed at this favorable rate.

The amount of a dividend will include the net amount withheld by us in respect of Chilean withholding taxes on the distribution. The amount of the dividend will be treated as foreign-source dividend income to a beneficial owner and will not be eligible for the dividends-received deduction generally allowed to U.S. corporations under the Code. Dividends will be included in a beneficial owner's income on the date of the beneficial owner's, or in the case of ADSs, the Depositary's receipt of the dividend. The amount of any dividend paid in Chilean pesos will be a U.S. dollar amount calculated by reference to the exchange rate for converting Chilean pesos into U.S. dollars in effect on the date of such receipt regardless of whether the payment is in fact converted into U.S. dollars. If the dividend is converted into U.S. dollars on the date of receipt, a beneficial owner generally should not be required to recognize foreign currency gain or loss in respect of the dividend income. A beneficial owner may have foreign currency gain or loss if the dividend is converted into U.S. dollars on a date after the date of receipt.

Subject to applicable limitations that may vary depending upon a beneficial owner's circumstances and subject to the discussion above regarding concerns expressed by the U.S. Treasury, the net amount of Chilean withholding tax (after reduction for the credit for Chilean corporate income tax, as discussed above under "— Chilean Tax Considerations — Taxation of Shares and ADSs — Taxation of Cash Dividends and Property Distributions" above) withheld from dividends on shares or ADSs will be creditable against a beneficial owner's U.S. federal income tax liability. The rules governing foreign tax credits are complex and, therefore, a beneficial owner should consult the beneficial owner's tax advisor regarding the availability of foreign tax credits in the beneficial owner's particular circumstances. Instead of claiming a credit, a beneficial owner may, at the beneficial owner's election, deduct such Chilean taxes in computing the beneficial owner's taxable income, subject to generally applicable limitations under U.S. law. An election to deduct foreign taxes instead of claiming foreign tax credits applies to all taxes paid or accrued in the taxable year to foreign countries and possessions of the United States.

Sale or Other Disposition of Shares or ADSs

If a beneficial owner is a U.S. Holder, for U.S. federal income tax purposes, the gain or loss a beneficial owner realizes on the sale or other disposition of shares or ADSs will be a capital gain or loss, and will be a long-term capital gain or loss if the beneficial holder has held the shares or ADSs for more than one year. The amount of a beneficial owner's gain or loss will equal the difference between the beneficial owner's tax basis in the shares or ADSs disposed of and the amount realized on the disposition, in each case as determined in U.S. dollars. Such gain or loss will generally be U.S.-source gain or loss for foreign tax credit purposes. In addition, certain limitations exist on the deductibility of capital losses by both corporate and individual taxpayers.

In certain circumstances, Chilean taxes may be imposed upon the sale of shares. See "— Chilean Tax Considerations — Taxation of Shares and ADSs." If a Chilean tax is imposed on the sale or disposition of shares, and a beneficial owner that is a U.S. Holder does not receive significant foreign source income from other sources, such beneficial owner may not be able to credit such Chilean tax against the beneficial owner's U.S. federal income tax liability.

Passive Foreign Investment Company Rules

We believe that we were not a "passive foreign investment company" ("PFIC") for U.S. federal income tax purposes for our 2014 taxable year and do not expect to be or become one for our 2015 taxable year or for the foreseeable future. However, because PFIC status depends upon the composition of a company's income and assets and the market value of its assets from time to time, and because it is unclear whether certain types of our income constitute passive income for PFIC purposes, there can be no assurance that we will not be considered a PFIC for any taxable year. If we were to become a PFIC for any taxable year during which a beneficial owner held shares or ADSs, certain adverse consequences could apply to the beneficial owner, including the imposition of higher amounts of tax than would otherwise apply, and additional filing requirements. Beneficial owners should consult their tax advisors regarding the consequences to them if we were a PFIC, as well as the availability and advisability of making any election that might mitigate the adverse consequences of PFIC status.

Information Reporting and Backup Withholding

Payments of dividends and sales proceeds that are made within the United States or through certain U.S.-related financial intermediaries generally are subject to information reporting and to backup withholding unless (i) the beneficial owner is an exempt recipient or (ii) in the case of backup withholding, the beneficial owner provides a correct taxpayer identification number and certifies that the beneficial owner is not subject to backup withholding.

The amount of any backup withholding from a payment to a beneficial owner will be allowed as a credit against the beneficial owner's U.S. federal income tax liability and may entitle the beneficial owner to a refund, provided that the required information is furnished in a timely fashion to the Internal Revenue Service.

Medicare Contribution Tax

Legislation enacted in 2010 generally imposes a tax of 3.8% on the "net investment income" of certain individuals, trusts and estates. Among other items, net investment income generally includes gross income from dividends and net gain attributable to the disposition of certain property, like the shares or ADSs, less certain deductions. A beneficial owner should consult the beneficial owner's tax advisor regarding the possible application of this legislation in the beneficial owner's particular circumstances.

Beneficial owners should consult their tax advisors with respect to the particular consequences to them of receiving, owning or disposing of shares or ADSs.

Item 11. Quantitative and Qualitative Disclosures About Market Risk

We are exposed to risks arising from changes in commodity prices, interest rates and foreign exchange rates. Our Board of Directors approves risk management policies at all levels.

Commodity Price Risk

In our electricity generation business, we are exposed to market risks arising from the price volatility of electricity, natural gas, diesel oil, and coal. Natural gas is used in some of our power plants in South America. We seek to ensure our fuel supply by securing long-term contracts with our suppliers for periods that are expected to match the lifetime of our generation assets. These contracts generally have provisions that allow us to purchase natural gas at market prices prevailing at the time the purchase occurs. As of December 31, 2014, 2013 and 2012, we did not hold contracts classified as derivative financial instruments or financial instruments related to natural gas. However, during 2014, we entered into contracts classified as derivative commodity instruments related to natural gas (17.1 million MBTU) for the period between January and December 2014. As of December 31, 2014, we held contracts classified as a derivative commodity instruments related to natural gas (350,000 MBTU).

In the countries where we operate using coal and diesel oil, the dispatch mechanism allows the thermal power plants to cover their operational costs. However, under certain circumstances, fuel price fluctuations might affect marginal costs. We transfer commodity prices variations to the sale contract prices according to indexing formulas but only to the extent possible in our different markets. Due to the continuing drought in Chile and the price volatility of coal and petroleum, we hedged this risk with commodity instruments available in international markets. During 2014, we entered into contracts classified as derivative commodity instruments related to petroleum-based liquid fuel (3.3 million BBL), for the period between January and December 2014. As of December 31, 2014, 2013 and 2012, we did not hold any contracts classified as either derivative financial instruments or financial instruments related either to coal or petroleum-based liquid fuel. As of December 31, 2014, we held contracts classified as a derivative commodity instruments related to petroleum-based liquid fuel (266,000 BBL).

Additionally, through adequate commercial risk mitigation policies, and a hydro-thermal power plant mix, we seek to naturally protect our operating income from electricity price volatility. As of December 31, 2014, we did not hold electricity price-sensitive instruments.

We are continually analyzing ways to hedge commodity price risk, like adjusting commodity indexed price formulas for new Power Purchase Agreements ("PPAs") according to our exposure and/or analyzing ways to mitigate risk through hydrological insurance in dry years. In the future we may use price-sensitive instruments.

Interest Rate and Foreign Currency Risk

The recorded values of our debt as of December 31, 2014, are detailed below, according to maturity. Total values do not include the effect of derivatives.

⁽¹⁾ As of December 31, 2013, fair value was calculated based on the discounted value of future cash flows expected to be paid (or received), considering current discount rates that reflect the different risks involved.

Interest Rate Risk

At December 31, 2014 and 2013, 13.5% and 28%, respectively, of our outstanding net debt obligations were subject to variable interest rates.

We manage interest rate risk by maintaining a mixture of both variable and fixed rate debt, according to the policy approved by the Board of Directors. Additionally, we manage interest rate risk through the use of interest rate derivatives. The above percentages include the effect of interest rate derivatives (swaps or collars) that hedge part of our debt.

Foreign Currency Risk

We are exposed to foreign currency risk arising from debt denominated in U.S. dollars, Chilean pesos and other currencies. Some of our subsidiaries have a natural hedge between their revenues and the currency of their debt. For example, in the case of our Colombian subsidiaries, their revenues as well as their debts are linked to the Colombian peso. In some other cases, we do not have this natural hedge, and therefore, we try to manage this exposure with currency derivatives, such as U.S. dollar/UF exchange and U.S. dollar/local currency derivatives. However, this is not always possible due to market conditions. It is the case, for example, of Costanera in Argentina which its revenues are linked to the Argentine peso, and a substantial part of its debt is denominated in U.S. dollars, with no possibility of hedging this debt under reasonable conditions. Argentine debt denominated in U.S. dollars amounted to Ch\$ 43.9 billion as of December 31, 2014.

^{(2) &}quot;Other currencies" include the Euro, Brazilian real, Colombian peso, Argentine peso and Peruvian Nuevo Sol.

Our corporate currency risk policy has been in effect since 2004. This policy seeks to hedge the operating income of each country that is indexed to the U.S. dollar with liabilities in the same currency.

As of December 31, 2014, the recorded values for financial accounting purposes and the corresponding fair value of the instruments that hedge our foreign exchange risk were as follows:

Expected Maturity Date								
As of December 31,	2015	2016	2017	2018 (in millions	2019 of Ch\$) ⁽¹⁾	Thereafter	Total	Fair Value ⁽²⁾
UF to US\$	_	_	_	(III IIIIIIIII	260,451	_	260,451	(24,639)
US\$ to Ch\$/UF	_	233,262	_	_	´ —	_	233,262	(86,416)

Total	534,245	3,171	220,783				758,198	(190,526)

- (1) Calculated based on the Observed Exchange Rate as of December 31, 2013, which was Ch\$ 524.61 per US\$ 1.00.
- (2) Fair values were calculated based on the discounted value of future cash flows expected to be paid (or received), considering current discount rates that reflect the different risks involved.
- (3) "Other currencies" include the Euro, Brazilian real, Colombian peso, Argentine peso and Peruvian Nuevo Sol.
- (4) Include a Peruvian soles to US\$ hedge of Edegel (Chinango).

(d) Safe Harbor

The information in this "Item 11. Quantitative and Qualitative Disclosures About Market Risk", contains information that may constitute forward-looking statements. See "Forward-Looking Statements" in the Introduction of this Report for safe harbor provisions.

Item 12. Description of Securities Other Than Equity Securities

A. Debt Securities.

Not applicable.

B. Warrants and Rights.

Not applicable.

C. Other Securities.

Not applicable.

D. American Depositary Shares.

Depositary Fees and Charges

Our ADS program's depositary is Citibank, N.A. Under the terms of the deposit agreement, an ADS holder may have to pay the following service fees to the depositary:

Service Fees	Fees
(1) Issuance of ADS upon deposit of shares	Up to US\$ 5.00 per 100 ADS (or fraction thereof) issued
(2) Delivery of deposited securities against surrender of ADS	Up to US\$ 5.00 per 100 ADS (or fraction thereof) surrendered
$(3)\ Distribution\ of\ cash\ dividends\ or\ other\ cash\ distributions\ (i.e.,\ sale\ of\ rights\ and\ other\ entitlements)$	Up to US\$ 5.00 per 100 ADS (or fraction thereof) held
(4) Distribution of ADS pursuant to (i) stock dividends or other free stock distributions, or (ii) exercise of rights to purchase additional ADS	Up to US\$ 5.00 per 100 ADS (or fraction thereof) held
(5) Distribution of securities other than ADS or rights to purchase additional ADS (i.e., spin—off of shares)	Up to US\$ 5.00 per 100 ADS (or fraction thereof) held
(6) Depositary services	Up to US\$ 5.00 per 100 ADS (or fraction thereof) held on the applicable record date(s) established by the Depositary

Depositary Payments for Fiscal Year 2014

The depositary has agreed to reimburse certain expenses incurred by us in connection with our ADS program. In 2014, the depositary reimbursed expenses related primarily to investor relations' activities for a total amount of approximately US\$ 1.1 million (after applicable U.S. taxes).

PART II

Item 13. Defaults, Dividend Arrearages and Delinquencies

None.

Item 14. Material Modifications to the Rights of Security Holders and Use of Proceeds

None.

Item 15. Controls and Procedures

(a) Disclosure Controls and Procedures

We carried out an evaluation under the supervision and with the participation of our senior management, including the Chief Executive Officer and the Chief Financial Officer, of the effectiveness of the design and operation of our "disclosure controls and procedures" (as defined in Rules 13 (a) -15 (e) and 15 (d)-15 (e) under the Exchange Act) for the year ended December 31, 2014.

There are inherent limitations to the effectiveness of any system of disclosure controls and procedures, including the possibility of human error, and the circumvention or overriding of the controls and procedures. Accordingly, our disclosure controls and procedures are designed to provide reasonable assurance of achieving their control objectives.

Based upon our evaluation, the Chief Executive Officer and Chief Financial Officer concluded that the disclosure controls and procedures are effective in providing reasonable assurance that information required to be disclosed in the reports we file and submit under the Exchange Act is recorded, processed, summarized and reported, within the time periods specified in the applicable rules and forms, and that it is gathered and communicated to our management, including the Chief Executive Officer and Chief Financial Officer to allow timely decisions regarding required disclosure.

Our disclosure controls and procedures are designed to provide reasonable assurance of achieving their objectives, and our principal executive officer and principal financial officer have concluded that our disclosure controls and procedures are effective at that reasonable assurance level.

(b) Management's Annual Report on Internal Control Over Financial Reporting

As required by Section 404 of the Sarbanes-Oxley Act of 2002, our management is responsible for establishing and maintaining "adequate internal control over financial reporting" (as defined in Rule 13a-15(f) under the Exchange Act). Our internal control over financial reporting is designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of the financial statements for external purposes in accordance with IFRS, as issued by the IASB.

Because of its inherent limitations, internal control over financial reporting may not necessarily prevent or detect some misstatements. It can only provide reasonable assurance regarding financial statement preparation and presentation. Also, projections of any evaluation of effectiveness for future periods are subject to the risk that controls may become inadequate because of changes in conditions or because the degree of compliance with the policies or procedures may deteriorate over time.

During the first half of 2014, GasAtacama Holding and its subsidiaries, including GasAtacama, became part of our consolidated subsidiaries as a result of the acquisition made on April 22, 2014 by Endesa Chile of an additional 50% interest in GasAtacama Holding. GasAtacama Holding, on a consolidated basis, represents 2.6% of our total assets and 1.4% of our total revenues as reported in our consolidated financial statements for the year ended December 31, 2014.

Management assessed the effectiveness of its internal control over financial reporting for the year ended December 31, 2014. The assessment, which excluded the internal controls over financial reporting at GasAtacama Holding and its subsidiaries, was based on criteria established in "Internal Control – Integrated Framework (1992)" issued by the Committee of Sponsoring Organizations of the Treadway Commission ("COSO"). Based on the assessment, our management has concluded that as of December 31, 2014, our internal control over financial reporting was effective.

(c) Attestation Report

Our independent registered public accounting firm has audited the effectiveness of our internal control over financial reporting as of December 31, 2014. Their attestation report appears on page F-3

(d) Changes in internal control

During the first half of 2014, GasAtacama Holding and its subsidiaries, including GasAtacama, became part of our consolidated subsidiaries as a result of the acquisition made on April 22, 2014 by Endesa Chile of an additional 50% interest in GasAtacama Holding. GasAtacama Holding, on a consolidated basis, represents 2.6% of our total assets and 1.4% of our total revenues as reported in our consolidated financial statements for the year ended December 31, 2014.

In this acquisition, the companies Inversiones GasAtacama Holding Ltda., GasAtacama S.A., GasAtacama Chile S.A., Gasoducto TalTal S.A., Progas S.A., Gasoducto Atacama Argentina S.A., Atacama Finance Co., GNL Norte S.A. and Energex Co. became our subsidiaries. GasAtacama Holding has been included in the scope of the internal control model for financial reporting, and its processes and controls will be included and certified beginning in 2015.

There are no additional changes in our internal control over financial reporting identified in connection with the evaluation required by paragraph (d) of Rules 13a-15 or 15d-15 under the Exchange Act that occurred during 2014 that have materially affected, or are reasonably likely to materially affect, our internal control over financial reporting model.

Item 16. Reserved

Item 16A. Audit Committee Financial Expert

As of December 31, 2014, the Directors' Committee (which performs the functions of the Audit Committee) financial expert was Mr. Hernán Somerville, as determined by the Board of Directors. Mr. Somerville is an independent member of the Directors' Committee pursuant to the requirement of both Chilean law and NYSE corporate governance rules.

Item 16B. Code of Ethics

Our standards of ethical conduct are governed by means of the following five corporate rulings or policies: the Charter Governing Executives ("Estatuto del Directivo"), the Employee Code of Conduct, the Code of Ethics, the Zero Tolerance Anti-Corruption Plan (the "ZTAC Plan") and the Manual for the Management of Information of Interest to the Market (the "Manual").

The Charter Governing Executives was adopted by the Board of Directors in May 2003 and is applicable to all executives contractually related to us or our controlled subsidiaries in which we are the majority shareholder, both in Chile and abroad, including the Chief Executive Officer, the Chief Financial Officer and other senior officers of the Company. The objective of this set of rules is to establish standards for the governance of our management's actions, the behavior of management with respect to the principles governing their actions and the limitations and incompatibilities involved, all within our vision, mission and values. Likewise, the Employee Code of Conduct explains our principles and ethical values, establishes the rules governing our contact with customers and suppliers, and establishes the principles that should be followed by employees, including ethical conduct, professionalism and confidentiality. Both documents also impose limitations on the activities that our executives and other employees may undertake outside the scope of their employment with us.

The Manual, adopted by our Board of Directors in May 2008 and amended in February 2010, addresses the following issues: applicable standards and blackout periods in connection with the transactions of our securities or those of our affiliates by directors, management, principal executives, employees and other related parties; mechanisms for the continuous release of information that is of interest to the market; and mechanisms that provide protection for confidential information.

In addition to the corporate governance rules described above, our Board approved the Code of Ethics and the ZTAC Plan in its meeting held on June 24, 2010. The Code of Ethics is based on general principles such as impartiality, honesty, integrity and other values of similar importance, which are translated into detailed behavioral criteria. The ZTAC Plan reinforces the principles included in the Code of Ethics, but with a special emphasis in avoiding corruption in the form of bribery, preferential treatment, and other similar acts.

A copy of these documents is available upon request, free of charge, by writing or calling us at:

Investor Relations Department Enersis S.A. Santa Rosa 76, Piso 15 Santiago, Chile (56-2) 2353-4682

During fiscal year 2014, there have been no amendments to any provisions of the documents described above. No waivers from any provisions of the Charter Governing Executives, the Employee Code of Conduct, the Code of Ethics, the ZTAC Plan or the Manual, were expressly or implicitly granted to the Chief Executive Officer, the Chief Financial Officer or any other senior financial officer of the Company in fiscal year 2014.

Item 16C. Principal Accountant Fees and Services

The following table provides information on the aggregate fees for approved services billed by our independent registered accounting firm, as well as their other member firms and their respective affiliates, by type of services for the periods indicated.

Services	2014	2013
	(in mil	lions of Ch\$)
Audit fees(1)	1,87	2 1,645
Audit-related fees ⁽²⁾	32	1 149
Tax fees	-	_
All other fees	_	_
Total	2,19	3 1,794

- (1) The increase in audit fees during 2014 was due mainly to the following services
 - On August 31, 2014, the full statutory audits of Emgesa and Codensa in the amount of Ch\$ 158 million.
 - New consolidated statements of financial position due to the implementation of IFRS in Colombia for Codensa and Emgesa in the amount of Ch\$ 119.8 million.
 - 2013 overrun audits for Chile and Brazil companies in the amount of Ch\$ 213.6 million.
- (2) The increase in audit-related fees during 2014 was due to the following services provided:
 - Audit-related services in relation to the Yankee Bond issued by Endesa Chile totaling Ch\$ 65.3 million.
 - Audit-related services in relation to the new accounting plan enacted by ANEEL in Brazil in the amount of Ch\$ 36 million.
 - Audit-related services in relation to the sustainability reports of Endesa Chile and Chilectra in the amount of Ch\$ 58.4 million.

All of the fees disclosed under audit-related fees and all other fees were pre-approved by the Directors' Committee pre-approval policies and procedures.

The amounts included in the table above and the related footnotes have been classified in accordance with SEC guidance.

Directors' Committee Pre-Approval Policies and Procedures

Our external auditors are appointed by our shareholders at the OSM. Similarly, the shareholders of our subsidiaries, which are located in countries where applicable law and regulation so establishes, appoint their own external auditors.

The Directors' Committee (which performs the functions of the Audit Committee), acting through the CFO, manages appointment proposals, reviews engagement letters, negotiates fees, ensures quality control in respect of the services provided, reviews and controls independence issues, and other related matters.

The Directors' Committee has a pre-approval policy regarding the contracting of our external auditor, or any affiliate of the external auditor, for professional services. The professional services covered by such policy include audit and non-audit services provided to us.

Fees payable in connection with recurring audit services are pre-approved as part of our annual budget. Fees payable in connection with non-recurring audit services, once they have been analyzed by the CFO, are submitted to the Directors' Committee for approval or rejection.

The pre-approval policy established by the Directors' Committee for non-audit services and audit-related fees is as follows:

- The business unit that has requested the service and the audit firm expected to perform the service must request that the CFO review the nature of the service to be provided.
- The CFO then analyzes the request and requires the selected audit firm to issue a certificate signed by the partner responsible for the audit of our consolidated financial statements confirming such audit firm's independence.
- Finally, the proposal is submitted to the Directors' Committee for approval or denial.

The Directors' Committee has designed, approved, and implemented the necessary procedures to fulfill the new requirements described in SEC release number 34-53677, File No. PCAOB-2006-01 (Audit Committee Pre-Approval of Certain Tax Services).

Item 16D. Exemptions from the Listing Standards for Audit Committees

Not applicable.

Item 16E. Purchases of Equity Securities by the Issuer and Affiliated Purchasers

		Average Price		Maximum Number of Shares
	Total Number of Shares acquired (1)	Paid per Share (Ch\$/per Share)	Total Number of Shares acquired	that might be yet acquired
October 2014	9,967,630,058	208.66	9,967,630,058	
Total	9,967,630,058	208.66	9,967,630,058	

⁽¹⁾ Corresponds to number of Shares purchased by Enel Energy Europe S.R.L. (currently named Enel Iberoamérica S.R.L.) from Endesa Spain on October 23, 2014.

Report of Independent Registered Public Accounting Firm

The Board of Directors and Shareholders of Enersis S.A.

We have audited the accompanying consolidated statements of financial position of Enersis S.A. and subsidiaries (the "Company") as of December 31, 2014 and 2013, and the related consolidated statements of comprehensive income, changes in equity, and cash flows for each of the three years in the period ended December 31, 2014. Our audits also included the financial statement schedule of Enersis S.A.'s condensed unconsolidated financial information. These consolidated financial statements and the schedule are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements and the schedule based on our audits.

The consolidated financial statements of the Company include the consolidated financial statements of its subsidiary, Empresa Nacional de Electridad S.A ("Endesa-Chile"). The consolidated financial statements of Endesa-Chile include the financial statements of the following entities, each having been prepared in conformity with its respective local statutory accounting basis: Emgesa S.A. E.S.P ("Emgesa") and Endesa Argentina S.A. ("Endesa-Argentina") (both subsidiaries of Endesa-Chile), and of Enel Brasil S.A. ("Enel-Brasil") (a consolidated subsidiary of the Company that is also a 38.64% percent owned investee of Endesa-Chile accounted for using the equity method). Except for the amounts included in Endesa-Chile's consolidated financial statements relating to Emgesa, Endesa-Argentina and Enel-Brasil, which we subjected to our audit procedures in the context of the financial statements of Endesa-Chile, we did not audit the consolidated financial statements of Endesa-Chile. The consolidated financial statements of Endesa-Chile, exclusive of the amounts relating to Emgesa, Endesa-Argentina and Enel-Brasil, reflect total assets constituting 27% and 24% of the Company's consolidated total assets as of December 31, 2014 and 2013, respectively, and total revenues constituting 17%, 16% and 18% of the Company's consolidated total revenues for the years ended December 31, 2014, 2013 and 2012, respectively. Endesa-Chile's consolidated financial statements were audited by other auditors whose report has been furnished to us, and our opinion on the Company's consolidated financial statements, insofar as it relates to the amounts included for Endesa-Chile (but exclusive of the amounts for Emgesa, Endesa-Argentina and Enel-Brasil), is based solely on the report of the other auditors.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits and the report of other auditors provide a reasonable basis for our opinion.

In our opinion, based on our audits and the report of other auditors (see second paragraph above), the financial statements referred to above present fairly, in all material respects, the consolidated financial position of Enersis S.A. and subsidiaries at December 31, 2014 and 2013, and the consolidated results of their operations and their cash flows for each of the three years in the period ended December 31, 2014, in conformity with International Financial Reporting Standards (IFRS), as issued by the International Accounting Standards Board. Also, in our opinion, the related financial statement schedule of condensed unconsolidated financial information of Enersis S.A., when considered in relation to the basic consolidated financial statements, taken as whole, presents fairly, in all material respects, the information set forth therein.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), Enersis S.A.'s internal control over financial reporting as of December 31, 2014, based on criteria established in Internal Control-Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (1992 framework) and our report dated April 30, 2015 expressed an unqualified opinion thereon based on our audit and the report on internal controls of other auditors.

Report of Independent Registered Public Accounting Firm On Internal Control Over Financial Reporting

The Board of Directors and Shareholders of Enersis S.A.

We have audited the internal control over financial reporting of Enersis S.A. and subsidiaries (the "Company") as of December 31, 2014, based on criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (1992 framework) (the COSO criteria). The Company's management is responsible for maintaining effective internal control over financial reporting, and for its assessment of the effectiveness of internal control over financial reporting included in the accompanying Management's Annual Report on Internal Control Over Financial Reporting. Our responsibility is to express an opinion on the company's internal control over financial reporting based on our audit. We did not examine the effectiveness of internal control over financial reporting of Empresa Nacional De Electricidad S.A. (a subsidiary) and certain of its subsidiaries, associates and jointly controlled entities (hereinafter collectively referred to as "Endesa-Chile") which statements reflect total assets and total revenues constituting 42% and 27%, respectively, of the related consolidated totals. The effectiveness of Endesa-Chile's internal control over financial reporting was audited by other auditors whose report has been furnished to us, and our opinion, insofar as it relates to the effectiveness of Endesa-Chile's internal control over financial reporting, is based solely on the report of the other auditors.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, testing and evaluating the design and operating effectiveness of internal control based on the assessed risk, and performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, based on our audit and the report of other auditors, Enersis S.A. and subsidiaries maintained, in all material respects, effective internal control over financial reporting as of December 31, 2014, based on the COSO criteria.

As indicated in the accompanying "Management's Annual Report on Internal Control Over Financial Reporting", management's assessment of and conclusion on the effectiveness of internal control over financial reporting did not include the internal controls of Inversiones GasAtacama Holding Ltda. and its subsidiaries, which is included in the 2014 consolidated financial statements of Enersis S.A. and subsidiaries and constituted 2.6% of total assets, as of December 31, 2014 and 1.4% of revenues, for the year then ended. Our audit of internal control over financial reporting of Enersis S.A. and subsidiaries also did not include an evaluation of the internal control over financial reporting of GasAtacama Holding Ltda. and its subsidiaries.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated statements of financial position of Enersis S.A. and subsidiaries as of December 31, 2014 and 2013 and the related consolidated statements of comprehensive income, changes in equity, and cash flows for each of the three years in the period ended December 31, 2014 of Enersis S.A. and subsidiaries and the financial statement schedule of Enersis S.A.'s condensed unconsolidated financial information of Enersis S.A., and our report dated April 30, 2015 expressed an unqualified opinion thereon based on our audit and the report of other auditors.

Report of Independent Registered Public Accounting Firm

The Board of Directors and Shareholders of Empresa Nacional de Electricidad S.A. (Endesa—Chile):

We have audited the accompanying consolidated statements of financial position of Endesa-Chile and subsidiaries (the Company) as of December 31, 2014 and 2013, and the related consolidated statements of comprehensive income, changes in equity, and cash flows for each of the years in the three-year period ended December 31, 2014. These consolidated financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these consolidated financial statements based on our audits. We did not audit the financial statements of certain subsidiaries, which statements reflect total assets constituting 34.13 percent and 36.12 percent of the Company's consolidated total assets as of December 31, 2014 and 2013, respectively, and total revenues constituting 36.74 percent, 36.26 percent and 38.27 percent of the Company's consolidated total revenues for the years ended December 31, 2014, 2013 and 2012, respectively. In addition, we did not audit the financial statements of Enel Brasil S.A. (formerly Endesa Brasil S.A.) (a 38.64 percent owner investee company). The Company's investment in Enel Brasil S.A. (formerly Endesa Brasil S.A.) as of December 31, 2014 and 2013 was ThCh\$ 538,876,929 and ThCh\$ 543,713,349, respectively, and its equity in earnings was ThCh\$62,181,301, ThCh\$94,402,624 and ThCh\$107,503,620 for the years ended December 31, 2014, 2013 and 2012, respectively. Those consolidated financial statements prepared in accordance with the local statutory accounting basis were audited by other auditors whose reports have been furnished to us and our opinion, insofar as it relates to the amounts included for those entities on such basis of accounting, is based solely on the reports of the other auditors. Accordingly, we have audited the conversion adjustments to the financial statements of these subsidiaries and nonsubsidiary investees prepared in accordance with the local statutory accounting basis to conform them to the Company's accounting basis referred to below.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the consolidated financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the consolidated financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits and the reports of the other auditors provide a reasonable basis for our opinion.

In our opinion, based on our audits and the reports of the other auditors, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of Endesa-Chile and subsidiaries as of December 31, 2014 and 2013, and the results of their operations and their cash flows for each of the years in the three-year period ended December 31, 2014, in conformity with International Financial Reporting Standards as issued by the International Accounting Standards Board.

KPMG Auditores Consultores Ltda, a Chilean limited liability partnership and a member firm of the KPMG network of independent member firms affiliated with KPMG International Cooperative ("KPMG International"), a Swiss entity. All rights reserved.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), Endesa-Chile's internal control over financial reporting as of December 31, 2014, based on the criteria established in Internal Control — Integrated Framework (1992) issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO), and our report dated April 30, 2015, expressed an unqualified opinion on the effectiveness of the Company's internal control over financial reporting.

Report of Independent Registered Public Accounting Firm

The Board of Directors and Shareholders of Empresa Nacional de Electricidad S.A. (Endesa—Chile):

We have audited the internal control over financial reporting of Endesa-Chile as of December 31, 2014, based on criteria established in *Internal Control – Integrated Framework (1992)* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). Endesa-Chile's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in the accompanying *Management's Annual Report on Internal Control over Financial Reporting*. Our responsibility is to express an opinion on the Endesa-Chile's internal control over financial reporting based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audit also included performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, Endesa-Chile maintained, in all material respects, effective internal control over financial reporting as of December 31, 2014, based on criteria established in *Internal Control – Integrated Framework (1992)* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO).

Endesa-Chile acquired a controlling interest in Inversiones GasAtacama Holdings Limitada (GasAtacama) during 2014, and management excluded from its assessment of the effectiveness of Endesa-Chile's internal control over financial reporting as of December 31, 2014, GasAtacama's internal control over financial reporting associated with total assets of ThCh\$414,169,914 and total revenues of ThCh\$113.630.908 included in the consolidated financial statements of Endesa-Chile and subsidiaries as of and for the year ended December 31, 2014. Our audit of internal control over financial reporting of Endesa-Chile also excluded an evaluation of the internal control over financial reporting of GasAtacama.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated the statements of financial position of Endesa-Chile and subsidiaries as of December 31, 2014 and 2013, and the related consolidated statements of comprehensive income, changes in equity, and cash flows for each of the years in the three-year period ended December 31, 2014, and our report dated April 30, 2015 expressed an unqualified opinion on those consolidated financial statements.

CONSOLIDATED FINANCIAL STATEMENTS FOR THE YEAR ENDED DECEMBER 31, 2014 AND 2013 (In thousands of Chilean pesos)

1. THE GROUP'S ACTIVITIES AND FINANCIAL STATEMENTS

Enersis S.A. (hereinafter the Parent Company or the Company) and its subsidiaries comprise the Enersis Group (hereinafter Enersis or the Group).

Enersis S.A. is a publicly traded corporation with registered address and head office located at Avenida Santa Rosa, No. 76, in Santiago, Chile. The Company is registered in the securities register of the Superintendency of Securities and Insurance of Chile (Superintendencia de Valores y Seguros or SVS) under number 175. In addition, the Company is registered with the Securities and Exchange Commission of the United States of America (hereinafter U.S. SEC) and with Spain's Comisión Nacional del Mercado de Valores. The Company's shares have been listed on the New York Stock Exchange since 1993 and on the Latibex since 2001.

Enersis S.A. is a subsidiary of Enel Iberoamérica S.R.L., a company controlled by Enel S.p.A. (hereinafter Enel).

The Company was initially created in 1981 under the corporate name of Compañía Chilena Metropolitana de Distribución Eléctrica S.A. Later on, the Company changed its by-laws and its name to Enersis S.A. effective August 1, 1988. For tax purposes, the Company operates under Chilean tax identification number 94,271,000-3.

As of December 31, 2014 the Group had 12,275 employees. During the 2014 fiscal year, the Group averaged a total of 11,931 employees. See Note 37 for additional information regarding employee distribution by category and geographic location.

Enersis's corporate purpose consists of exploring for, developing, operating, generating, distributing, transmitting, transforming, and/or selling energy of any kind or form, whether in Chile or abroad, either directly or through other companies. It is also engaged in telecommunications activities, and it provides engineering consultation services in Chile and abroad. The Company's corporate purpose also includes investing in, and managing, its investments in subsidiaries and associates which generate, transmit, distribute, or sell electricity, or whose corporate purpose includes any of the following:

- (i) energy of any kind or form,
- (ii) supplying public services, or services whose main component is energy,
- (iii) telecommunications and information technology services, and
- (iv) Internet-based intermediation business.

Enersis's 2013 consolidated financial statements were approved by the Board of Directors at a meeting held on February 7, 2014. The consolidated financial statements were then submitted to the consideration of a General Shareholders' Meeting held on April 23, 2014, which gave its final approval to the consolidated financial statements.

These consolidated financial statements are presented in thousands of Chilean pesos (unless expressly stated otherwise), as the Chilean peso is the functional currency of the Company. Foreign operations are reported in accordance with the accounting policies stated in Notes 2.6 and 3.n.

2. BASIS OF PRESENTATION OF THE CONSOLIDATED FINANCIAL STATEMENTS

2.1 Accounting principles

The December 31, 2014 consolidated financial statements of Enersis have been prepared in accordance with International Financial Reporting Standards (IFRS) as issued by the International Accounting Standards Board (IASB) and approved by the Company's Board of Directors at its meeting held on April 28, 2015.

These consolidated financial statements present fairly the financial position of Enersis and its subsidiaries at December 31, 2014 and 2013, as well as the results of operations, the changes in equity, and the cash flows for the years ended December 31, 2014, 2013 and 2012.

These consolidated financial statements have been prepared using cost method accounting applied to the business in operation principle except, in accordance with IFRS, those assets and liabilities that are reported at a fair value and those non-current assets and groups that are available for sale, which are recorded at the book value or the fair value minus sales costs, whichever is lower (see Note 3).

These consolidated financial statements have been prepared from accounting records maintained by the Company and its subsidiaries. Each entity prepares its financial statements according to the accounting principles and standards in force in each country, so the necessary adjustments and reclassifications have been made in the consolidation process in order to present the consolidated financial statements in accordance with IFRS.

2.2 New accounting pronouncements

a) Accounting pronouncements effective from January 1, 2014:

Standards, Interpretations and Amendments	Mandatory Application for:
Amendment to IAS 32: Financial Instruments: Presentation	
Clarifies the requirements for offsetting financial assets and financial liabilities in order to eliminate inconsistencies from the application of the current IAS 32 offsetting criteria.	Annual periods beginning on or after January 1, 2014.
Amendments to IFRS 10 and 12, and IAS 27: Investment Entities	
Under IFRS 10 requirements, the reporting entities must consolidate all of the companies over which they have control. The amendment establishes an exception to these requirements, allowing the Investment Entities to measure their investments at fair value with changes in income as per IFRS 9 instead of consolidating them.	Annual periods beginning on or after January 1, 2014.
IFRIC 21: Levies	
This interpretation of IAS 37, "Provisions, Contingent Liabilities and Contingent Assets" outlines when an entity must recognize a government-imposed levy other than income tax as a liability in its financial statements.	Annual periods beginning on or after January 1, 2014.
Amendment to IAS 36: Impairment of Assets	
This amendment remove the unintended consequences of IFRS 13 on the disclosures required under IAS 36. In addition, the amendment require disclosure of the recoverable amounts for the assets or CGUs for which impairment loss has been recognised or reversed during the period.	Annual periods beginning on or after January 1, 2014.

Standards, Interpretations and Amendments

Mandatory Application for:

Amendment to IAS 39: Financial Instruments: Recognition and Measurement (Novation of derivatives)

Annual periods beginning on or after January 1, 2014.

This amendment incorporates into the Standard the criteria that must be met in order not to discontinue hedge accounting in circumstances when a hedging instrument is novated.

The new interpretation and amendments adopted, which went into effect on January 1, 2014, had no effect on the consolidated financial statements of Enersis and its subsidiaries.

b) Accounting pronouncements in effect from January 1, 2015 and subsequent periods:

As of the date of issue of these consolidated financial statements, the following accounting pronouncements had been issued by the IASB, but their application was not yet mandatory:

Standards, Interpretations and Amendments

Mandatory Application for:

IFRS 9: Financial Instruments

This is the final version of the standard issued in July 2014 and which completes the IASB project to replace IAS 39 "Financial Instruments: Recognition and Measurement." This project was divided into 3 phases:

Phase 1 – Classification and measurement of financial assets and financial liabilities. This introduces a logical focus for the classification of financial assets driven by cash flow characteristics and the business model. This new model also results in a single impairment model being applied to all financial instruments.

Phase 2 – Impairment methodology. The objective is a more timely recognition of expected credit losses. The standard requires entities to account for expected credit losses from the time when financial instruments are first recognized in the financial statements.

Annual periods beginning on or after January 1, 2018.

Phase 3 – Hedge accounting. This establishes a new model aimed at reflecting better alignment between hedge accounting and risk management activity. Also included are enhancements to required disclosures.

This final version of IFRS 9 replaces the previous versions of the Standard.

IFRS 14: Regulatory Deferral Accounts

The purpose of this interim standard is to reduce the barriers to adoption of the IFRS by entities that carry out business activities that are subject to price or rate regulation. This standard allows those who are first-time adopters of IFRS, and who meet the requirements, to continue to account for regulatory deferral balances in their first IFRS financial statements using their previous GAAP accounting practices regarding regulated rates. It also establishes specific requirements for presenting balances and disclosing information.

Annual periods beginning on or after January 1, 2016.

IFRS 15: Revenue from Contracts with Customers

This new standard applies to all contracts with customers except leases, financial instruments and insurance contracts. Its purpose is to make financial information more comparable, and it provides a new model for revenue recognition and more detailed requirements for contracts with multiple obligations. It also requires more itemized information. This standard will replace IAS 11 and IAS 18 as well as their interpretations (IFRIC 13, IFRIC 15, IFRIC 18 and SIC 31).

Annual periods beginning on or after January 1, 2017.

Standards, Interpretations and Amendments

Amendment to IAS 19: Employee Benefits

The purpose of this amendment is to simplify the accounting for contributions from employees or third parties that are not determined on the basis of an employee's years of service, such as employee contributions calculated according to a fixed percentage of salary.

Annual periods beginning on or after July 1, 2014.

obligatoria para:

Aplicación

Improvements to IFRS (Cycles 2010-2012 and 2011-2013)

These are a set of improvements that were necessary, but not urgent, and that amend the following standards: IFRS 2, IFRS 3, IFRS 8, IFRS 13, IAS 16, IAS 24, IAS 38 and IAS 40.

Annual periods beginning on or after July 1, 2014.

Amendment to IFRS 11: Joint Arrangements

This amendment states that the accounting standards contained in IFRS 3 and other standards that are pertinent to business combinations accounting must be applied to the accounting for acquiring an interest in a joint operation in which the activities constitutes a business.

Annual periods beginning on or after January 1, 2016.

Amendment to IAS 16 and IAS 38: Clarification of Acceptable Methods of Depreciation and Amortization

The amendment to IAS 16 explicitly forbids the use of revenue-based depreciation for property, plant and equipment. The amendment to IAS 38 introduces the rebuttable presumption that, for intangible assets, the revenue-based amortization method is inappropriate and establishes two limited exceptions.

Annual periods beginning on or after January 1, 2016.

Improvements to IFRS (Cycles 2012-2014)

These are a set of improvements that were necessary, but not urgent, and that amend the following standards IFRS 5, IFRS7, IAS19 and IAS 34.

Annual periods beginning on or after January 1, 2016.

Amendment to IFRS 10 and IAS 28: Sale or Contribution of Assets

The amendment corrects an inconsistency between IFRS 10 and IAS 28 relating to the accounting treatment of the sale or contributions of assets between an Investor and its Associate or Joint Venture.

Annual periods beginning on or after January 1, 2016.

Amendment to IAS 27: Equity Method in Separate Financial Statements

This improvement allows entities to use the equity method to account for investments in subsidiaries, joint ventures and associates in their separate financial statements. The objective of the improvement is to minimize the costs associated with complying with the IFRS, particularly for those entities applying IFRS for the first time, without reducing the information available to investors.

Annual periods beginning on or after January 1, 2016.

Amendment to IAS 1: Disclosure Initiative

The IASB has issued amendments to IAS 1 as part of its principal initiative to improve the presentation and disclosure of information in financial statements. These amendments are designed to assist companies in applying professional judgment to determine what type of information to disclose in their financial statements.

Annual periods beginning on or after January 1, 2016.

Standards, Interpretations and Amendments

Mandatory Application for:

Amendment to IFRS 10, IFRS 12 and IAS 28: Investment Entities, Application of the Consolidation Exception

Annual periods beginning on or after January 1, 2016.

The modifications, which have a restricted scope, introduce clarifications to the requirements for the accounting of investment entities. The modifications also provide relief in some circumstances, which will reduce the costs of applying the Standards.

The Group is assessing the impact of applying IFRS 9 and IFRS 15 from the date it goes into effect. In Management's opinion, the application of the other standards and amendments pending application is not expected to have a significant effect on the consolidated financial statements of Enersis and its subsidiaries.

2.3 Responsibility for the information, judgments and estimates provided

The Company's Board of Directors is responsible for the information contained in these consolidated financial statements and expressly states that all IFRS principles and standards, as issued by the IASB, have been fully implemented.

In preparing the consolidated financial statements, certain judgments and estimates made by the Company's Management have been used to quantify some of the assets, liabilities, income, expenses and commitments recorded in the statements.

The most important areas that have required professional judgment are:

- In a service concession agreement, the decision as to whether a principal controls or regulates which services the operator should provide, to whom and at what price. These are essential details when applying IFRIC 12 (see Note 3.d.1).
- The identification of Cash Generating Units (CGU) for impairment testing (see Note 3.e).
- The hierarchy of information used to value assets and liabilities measured at fair value (see Note 3.h)

The estimates refer basically to:

- The valuations performed to determine the existence of impairment losses among assets and goodwill (see Note 3.e).
- The assumptions used to calculate the actuarial liabilities and obligations to employees, such as discount rates, mortality tables, salary raises, etc. (see Notes 3.m.1 and 25).
- The useful life of property, plant and equipment, and intangible assets (see Notes 3.a and 3.d).
- The assumptions used to calculate the fair value of financial instruments (see Notes 3.g.5 and 22).
- Energy supplied to customers whose meter readings are pending.
- Certain assumptions inherent in the electricity system affecting transactions with other companies, such as production, customer billings, energy consumption, etc. that allow for estimating electricity system settlements that must occur on the corresponding final settlement dates, but that are pending as of the date of issuance of the consolidated financial statements and could affect the balances of assets, liabilities, income and expenses recorded in the statements (see appendix 6.2).
- The probability that uncertain or contingent liabilities will be incurred and their related amounts (see Note 3.m).

- Future disbursements for the closure of facilities and restoration of land, as well as the discount rates to be used (see Note 3.a).
- The tax results of the various subsidiaries of the Group that will be reported to the respective tax authorities in the future, and that have served as the basis for recording different balances related to income taxes in these consolidated financial statements (see Note 3.p).
- The fair values of assets acquired and liabilities assumed, and any pre-existing interest in the company acquired in a business combination.

Although these judgments and estimates have been based on the best information available on the issuance date of these consolidated financial statements, future events may occur that would require a change (increase or decrease) to these estimates in subsequent periods. This change would be made prospectively, recognizing the effects of such a judgment or estimation change in the corresponding future consolidated financial statements.

2.4 Subsidiaries

Subsidiaries are defined as entities controlled either directly or indirectly by Enersis. Control is exercised if, and only if, the following conditions are met: Enersis has i) power over the subsidiary; ii) exposure or rights to variable returns from these companies; and iii) the capacity to use power to influence the amount of these returns.

Enersis has power over its subsidiaries when it holds the majority of the substantive voting rights or, should that not be the case, when it has rights granting it the present capacity to direct the entities' relevant activities, that is, the activities that significantly affect the subsidiary's results.

The Group will reassess whether it has control of a subsidiary if the facts and circumstances indicate that changes have taken place in one or more of the aspects of control mentioned above.

Appendix 1 of these consolidated financial statements, entitled Enersis Group Companies, describes the relationship of Enersis with each of its subsidiaries.

2.4.1 Changes in the scope of consolidation

On December 30, 2014, Inmobiliaria Manso de Velasco Ltda., a subsidiary of Enersis, completed the sale of all of its direct and indirect shareholdings in the companies Construcciones y Proyectos Los Maitenes SA and Aguas Santiago Poniente SA. The selling price of these shares was ThCh\$57,173,143, which was received in cash on the same date (see note 32).

The elimination of Maitenes SA and Aguas Santiago Poniente SA from the Enersis Group's scope of consolidation brought about a decrease in the consolidated statement of financial position of ThCh\$54,845,853 in current assets, ThCh\$12,822,077 in non-current assets, and ThCh\$1,393,348 in current liabilities; there was no effect on non-current liabilities.

During the first half of 2014, the company Inversiones GasAtacama Holding Limitada entered the Enersis Group's scope of consolidation as a result of Endesa Chile S.A.'s acquisition of a 50% stake in that company on April 22, 2014 (see Note 5).

By virtue of this operation, the following companies became subsidiaries of the Group: Inversiones GasAtacama Holding Limitada, GasAtacama S.A., GasAtacama Chile S.A., Gasoducto TalTal S.A., Progas S.A., Gasoducto Atacama Argentina S.A., Atacama Finance Co., GNL Norte S.A. and Energex Co.

The entry of GasAtacama Holding Limitada into the Enersis Group's scope of consolidation brought about an increase in the consolidated statement of financial position of ThCh\$198,924,289 in current assets, ThCh\$221,471,415 in non-current assets, ThCh\$69,989,919 in current liabilities, and ThCh\$35,672,488 in non-current liabilities.

The following companies entered the Enersis Group's scope of consolidation in 2013: Generalima S.A.C., Eléctrica Cabo Blanco S.A.C., Empresa Eléctrica de Piura S.A., Endesa Cemsa S.A., Inversora Dock Sud S.A. and Central Dock Sud S.A. They were all brought in by Endesa S.A. as part of the capital increase carried out by Enersis in March 2013 (see Notes 6 and 26.1.1).

The entry of these companies into the Enersis Group's scope of consolidation brought about an increase in the consolidated statement of financial position of ThCh\$110,222,618 in current assets, ThCh\$163,196,934 in non-current assets, ThCh\$180,637,895 in current liabilities, and ThCh\$54,241,781 in non-current liabilities.

2.4.2 Consolidated companies with an ownership interest of less than 50%

Although the Group holds, directly or indirectly, a 48.48% interest in the companies Comercializadora de Energía S.A. (Codensa) and Empresa Generadora de Energía Eléctrica S.A. (Emgesa), they are considered subsidiaries since Enersis exercises control over the entities through contracts or agreements with shareholders, or as a consequence of their structure, composition and shareholder classes. The Group holds 57.15% and 56.43% of the voting shares of Codensa and Emgesa, respectively.

2.4.3 Non-consolidated companies with an ownership interest of over 50%

Although the Enersis Group holds more than a 50% interest in Centrales Hidroeléctricas de Aysén S.A. (Aysén), it is considered a "joint venture" since the Group, through contracts or agreements with shareholders, exercises joint control of the company.

2.5 Associated companies and joint arrangements

Associated Companies are those in which Enersis, either directly or indirectly, exercises significant influence.

Significant influence is having the power to influence the financial and operational policy decisions of the associated company without having either sole or joint control over these policies. In general, significant influence is assumed to be those cases in which the Group has an ownership interest of over 20% (see Note 3.i).

Joint arrangements are defined as those entities in which the Group exercises control under an agreement with other shareholders and jointly with them, in other words, when decisions on the entities' relevant activities require the unanimous consent of the parties sharing control. Joint arrangements are classified as:

- Joint venture: an agreement under which the parties exercising joint control have rights to the entity's net assets.
- Joint operation: an agreement under which the parties exercising joint control have rights to the assets and obligations with respect to the liabilities involved in the arrangement. At this time, Enersis does not have any joint arrangements that qualify as joint operations.

Appendix 3 to these consolidated financial statements, entitled "Associated Companies and Joint Ventures," describes the relationship of Enersis with each of these companies.

2.6 Basis of consolidation and business combinations

The subsidiaries are consolidated and all their assets, liabilities, income, expenses, and cash flows are included in the consolidated financial statements once the adjustments and eliminations from intra-Group transactions have been made.

The comprehensive income of subsidiaries is included in the consolidated comprehensive income statement from the date that the parent company obtains control of the subsidiary until the date on which it loses control of the subsidiary.

The operations of the parent company and its subsidiaries have been consolidated under the following basic principles:

1. At the date the parent takes control, the subsidiary's assets acquired and its liabilities assumed are recorded at fair value, except for certain assets and liabilities that are recorded using valuation principles established in other IFRS standards. If the fair value of the consideration transferred plus the fair value of any non-controlling interest exceeds the fair value of the net assets acquired, this difference is recorded as goodwill. In the case of a bargain purchase, the resulting gain is recognized in profit or loss for the period after reevaluating whether all of the assets acquired and the liabilities assumed have been properly identified and following a review of the procedures used to measure the fair value of these amounts.

For each business combination, the Group chooses whether to value the non-controlling interests in an acquired company at fair value or at the proportional share of the net identifiable assets acquired.

If is impossible to determine the fair value of all assets acquired and liabilities assumed at the acquisition date, the Group reports the provisional values recorded. During the measurement period, which sall not exceed one year from the acquisition date, the provisional values recognized will be adjusted retrospectively and additional assets or liabilities will be recognized to reflect new information obtained on events and circumstances that existed on the acquisition date, but which were unknown to the management at that time.

For business combinations carried out in stages, the fair value of the stake previously held in the acquired company's equity is measured on the date of acquisition and any profit or loss is recognized in the results for that fiscal year.

- 2. Non-controlling interests in equity and in the comprehensive income of the consolidated subsidiaries are presented, respectively, under the line items "Total Equity: Non-controlling interests" in the consolidated statement of financial position and "Net Income attributable to non-controlling interests" and "Comprehensive income attributable to non-controlling interests" in the consolidated statement of comprehensive income.
- 3. The financial statements of foreign companies with functional currencies other than the Chilean peso are translated as follows:
 - a. For assets and liabilities, the prevailing exchange rate on the closing date of the financial statements is used.
 - b. For items in the comprehensive income statement, the average exchange rate for the period is used (unless this average is not a reasonable approximation of the cumulative effect of the exchange rates in effect on the dates of the transactions, in which case the exchange rate in effect on the date of each transaction is used).
 - c. Equity remains at the historical exchange rate from the date of acquisition or contribution, and retained earnings at the average exchange rate at the date of generation.
 - d. Exchange differences arising in the conversion of financial statements are recognized in the item "Foreign currency translation gains (losses)" within the consolidated statement of comprehensive income: Other comprehensive income (see Note 26.2).

- 4. Balances and transactions between consolidated companies were completely eliminated in the consolidation process.
- 5. Changes in interests in subsidiaries that do not result in taking or losing control are recorded as equity transactions, and the book value of the controlling and non-controlling interests is adjusted to reflect the change in relative interest in the subsidiary. Any difference that may exist, between the value for which a non-controlling interest is adjusted and the fair value of a compensation paid or received, is recognized directly in Equity attributable to the shareholders of Enersis.
- 6. Business combinations under common control are recorded using, as a reference, the 'pooling of interest' method. Under this method, the assets and liabilities involved in the transaction remain reflected at the same book value at which they were recorded in the ultimate controlling company, although subsequent accounting adjustments may need to be made to align the accounting policies of the companies involved.

Any difference between the assets and liabilities contributed to the consolidation and the compensation given is recorded directly in Net equity as a debit or credit to Other reserves. The Group does not apply retrospective accounting records of business combinations under common control.

3. ACCOUNTING CRITERIA APPLIED

The main accounting policies used in preparing the accompanying consolidated financial statements were the following:

a) Property, plant and equipment

Property, plant and equipment are valued at acquisition cost, net of accumulated depreciation and any impairment losses they may have experienced. In addition to the price paid to acquire each item, the cost also includes, where applicable, the following concepts:

- Financing expenses accrued during the construction period that are directly attributable to the acquisition, construction, or production of qualified assets, which require a substantial period of time before being ready for use such as, for example, electricity generation or distribution facilities. The Group defines "substantial period" as one that exceeds twelve months. The interest rate used is that of the specific financing or, if none exists, the mean financing rate of the company carrying out the investment. The mean financing rate depends principally on the geographic area and ranged between 7.5% and 10.8% as of December 31, 2014 (7.25% and 9.31% as of December 31, 2013). The amount capitalized for this concept amounted to ThCh\$56,918,667, ThCh\$30,325,539 and ThCh\$26,477,369 during the fiscal years ended December 31, 2014, 2013 and 2012, respectively (see Note 33).
- Employee expenses directly related to construction in progress. The amounts capitalized under this concept for the periods ended December 31, 2014, 2013 and 2012 were ThCh\$65,229,258, ThCh\$48,087,586 and ThCh\$32,925,771, respectively.
- Future disbursements that Endesa Chile will have to make to close their facilities are incorporated into the value of the asset at fair value, recording in the accounting the corresponding provision for dismantling or restoration. Endesa Chile reviews its estimate of these future disbursements on a yearly basis, increasing or decreasing the value of the asset based on the results of this estimate (see Note 24).

Items for construction work in progress are transferred to operating assets once the testing period has been completed and they are available for use, at which time depreciation begins.

Expansion, modernization or improvement costs that represent an increase in productivity, capacity or efficiency, or a longer useful life are capitalized as increasing the cost basis for the corresponding assets.

The replacement or overhaul of entire components that increase the asset's useful life or economic capacity are recorded as an increase in value for the respective assets, derecognizing the replaced or overhauled components.

Expenses for periodic maintenance, conservation and repair are recorded directly in income as an expense for the year in which they are incurred.

The Company, based on the outcome of impairment testing explained in Note 3.e), considers that the book value of assets does not exceed their net recoverable value.

Property, plant and equipment, net of its residual value, is depreciated by distributing the cost of the different items that comprise it on a straight-line basis over its estimated useful life, which is the period during which the companies expect to use the assets. Useful life estimates and residual values are, at least once a year, reviewed and if appropriate adjusted prospectively.

The following are the main categories of property, plant and equipment with their respective estimated useful lives:

Categories of Property, plant and equipment	Years of estimated useful life
Buildings	22 - 100
Plant and equipment	3 - 85
IT equipment	3 - 15
Fixtures and fittings	5 - 21
Motor vehicles	5 - 10
Other	2 - 33

Additionally, the following provides greater detail on the useful lives of plant and equipment items:

	Years of estimated useful life
Generating facilities:	
Hydroelectric plants	
Civil engineering works	35-65
Electromechanical equipment	10-85
Fuel oil/coal-fired power plants	25-40
Combined cycle plants	10-35
Renewable energy power plants	35
Transmission and distribution facilities:	
High-voltage network	10-80
Low- and medium-voltage network	7-62
Measuring and remote control equipment	3-76
Other facilities	4-25
Natural gas transport facilities	
Pipelines	35

Land is not depreciated since it has an indefinite useful life.

Regarding the administrative concessions held by the Group's electric companies, the following lists the periods remaining until expiration for the concessions that do not have an indefinite term:

Concession holder and operator	Country	Year concession started	Concession term	Period remaining to expiration
Empresa Distribuidora Sur S.A Edesur (Distribution)	Argentina	1992	95 years	73 years
Hidroeléctrica El Chocón S.A. (Generation)	Argentina	1993	30 years	9 years
Transportadora de Energía S.A. (Transmission)	Argentina	2002	85 years	73 years
Compañía de Transmisión del Mercosur S.A. (Transmission)	Argentina	2000	87 years	73 years
Central Eléctrica Cachoeira Dourada S.A. (Generation)	Brazil	1997	30 years	13 years
Central Generadora Termoeléctrica Fortaleza S.A (Generation)	Brazil	2001	30 years	17 years
Compañía de Interconexión Energética S.A. (CIEN - Line 1)	Brazil	2000	20 years	6 years
Compañía de Interconexión Energética S.A -(CIEN - Line 2)	Brazil	2002	20 years	8 years

To the extent that the Group recognizes assets as Property, plant and equipment, they are amortized over their economic life or the concession term, whichever is shorter. Any required investment, improvement or replacement made by the Group is considered in the impairment test to Property, plant, and equipment as a future contractual cash outflow that is necessary to obtain future cash inflow.

The Group's management evaluated the specific contract terms of each of the aforementioned concessions, which vary by country, business activity and jurisprudence, and concluded that, with the exception of CIEN, there are no determining factors indicating that the grantor, which in every case is a government entity, controls the infrastructure and, at the same time, can continuously set the price to be charged for services. These requirements are essential for applying IFRIC 12, an interpretation that establishes how to record and value certain types of concessions (see Note 3.d.1 for concession agreements within the scope of IFRIC 12).

On April 19, 2011, the subsidiary CIEN successfully completed the change in business model. Under the new agreement, the Government continues to control the infrastructure, but CIEN receives fixed payments, which puts it on an equal footing with a public transmission concession (with regulated prices).

Under this business model, its concessions fall within the scope of Standard IFRIC 12, but the infrastructure has not been derecognized due to the fact that CIEN has not substantially transferred the significant risks and benefits to the Brazilian Government. Gains or losses that arise from the sale or disposal of items of Property, plant and equipment are recognized as Other gains (losses) in the comprehensive income statement and are calculated by deducting the net book value of the asset and any sales expenses from the amount received in the sale.

b) Investment property

"Investment property" includes primarily land and buildings held for the purpose of earning rental income and/or for capital appreciation.

Investment property is valued at acquisition cost less any accumulated depreciation and impairment losses that have been incurred. Investment property, excluding land, is depreciated on a straight-line basis over the useful lives of the related assets.

The breakdown of the fair value of investment property is detailed in Note 18.

c) Goodwill

Goodwill arising from business combinations and reflected in the consolidation represents the excess value of the consideration paid plus the value of any non-controlling interest over the Group's share of the net value of the assets acquired and liabilities assumed, measured at fair value at the acquisition date. If goodwill is finally determined as existing in the financial statements the year following the acquisition, the prior year's accounts, which are presented for comparison purposes, are modified to include the value of the assets acquired and liabilities assumed and the value of the definitive goodwill from the acquisition date.

Goodwill generated from acquiring companies with functional currencies other than the Chilean peso is valued in the functional currency of the acquired company and converted to Chilean pesos using the exchange rate in effect as of the date of the statement of financial position.

Goodwill is not amortized; instead, at each period end or when indicators so suggest, the Company estimates whether any impairment has reduced its recoverable value to an amount less than the net recorded cost and, if so, it immediately adjusts for impairment (see Note 3.e).

d) Intangible assets other than goodwill

Intangible assets are initially recognized at their acquisition cost or production cost, and are subsequently valued at their cost, net of their accumulated amortization and of the impairment losses they may have experienced.

Intangible assets are amortized on a straight line basis during their useful life, starting from the time that they are in usable condition, except for those with an indefinite useful life, which are not amortized. As of December 31, 2014 and 2013, there were no significant amounts in intangible assets with an indefinite useful life.

The criteria for recognizing these assets' impairment losses and, if applicable, recovery of impairment losses recorded in previous fiscal years are explained in letter e) of this Note.

d.1) Concessions

Public-to-private service concession agreements are recorded according to IFRIC 12, "Service Concession Agreements." This accounting interpretation applies if:

- a) The grantor controls or regulates which services the operator should provide with the infrastructure, to whom it must provide them, and at what price; and
- b) The grantor controls through ownership, beneficial entitlement, or otherwise any significant residual interest in the infrastructure at the end of the term of the agreement.

If both of the above conditions are met simultaneously, the consideration received by the Group for the infrastructure construction is recognized at its fair value, as either an intangible asset when the Group receives the right to charge users of the public service, as long as these charges are conditional on the degree to which the service is used; or as a financial asset when the Group has an unconditional contractual right to receive cash or another financial asset directly from the grantor or from a third party. The Group recognizes the contractual obligations assumed for maintenance of the infrastructure during its use, or for its return to the grantor at the end of the concession agreement within the conditions specified in the agreement, as long as it does not involve an activity that generates income, in accordance with the Group's provision accounting policy (see Note 3.m).

Finance expenses attributable to the concession agreements are capitalized based on criteria established in Note 3 a) above, provided that the Group has a contractual right to receive an intangible asset. No finance expenses were capitalized during the years ended December 31, 2014, 2013 and 2012.

Additionally, during the fiscal years ended December 31, 2014, 2013 and 2012, employee expenses directly attributable to construction in progress amounting to ThCh\$12,046,728, ThCh\$13,877,942 and ThCh\$15,741,611 respectively, were capitalized.

The Enersis subsidiaries that have recognized an intangible asset from their service concession agreements are the following:

Concession holder and operator	Country	Year concession started	Concession term	Period remaining to expiration
Ampla Energía e Serviços S.A. (*) (Distribution)	Brazil	1996	30 years	12 years
Companhia Energética do Ceará S.A. (*) (Distribution)	Brazil	1997	30 years	13 years

^(*) Given that part of the rights acquired by our subsidiaries are unconditional, an available-for-sale financial asset has been recognized for the sale (see Notes 3.g.1 and 8).

d.2) Research and development expenses

The Group recognizes the costs incurred in a project's development phase as intangible assets in the statement of financial position as long as the project's technical viability and economic returns are reasonably assured.

Expenditures on research activities are recognized as an expense in the period in which they are incurred. These expenses amounted to ThCh\$1,894,105, ThCh\$1,996,818 and ThCh\$2,298,344, for the fiscal years ended December 31, 2014, 2013 and 2012 respectively.

d.3) Other intangible assets

These intangible assets correspond primarily to computer software, water rights, and easements. They are initially recognized at acquisition or production cost and are subsequently measured at cost less accumulated amortization and impairment losses, if any.

Computer software programs are amortized, on average, over five years. Certain easements and water rights have indefinite useful lives and are therefore not amortized, while others have useful lives ranging from 40 to 60 years, depending on their characteristics, and they are amortized over that term.

e) Asset impairment

e.1) Non-financial assets (except inventory and deferred tax assets)

During the year, and principally at year-end, the Company evaluates whether there is any indication that an asset has been impaired. Should any such indication exist, the company estimates the recoverable amount of that asset to determine the amount of impairment in each case. In the case of identifiable assets that do not generate cash flows independently, the company estimates the recoverability of the Cash Generating Unit (CGU) to which the asset belongs, which is understood to be the smallest identifiable group of assets that generates independent cash inflows.

Notwithstanding the preceding paragraph, in the case of CGUs to which goodwill or intangible assets with an indefinite useful life have been allocated, a recoverability analysis is performed routinely at each period end.

The recoverable amount is the greater amount between the fair value less the cost needed to sell and the value in use, which is defined as the present value of the estimated future cash flows. In order to calculate the recoverable value of Property, plant, and equipment, as well as of goodwill, and intangible assets, the Group uses value in use criteria in practically all cases.

To estimate the value in use, the Group prepares future cash flow projections, before tax, based on the most recent budgets available. These budgets incorporate management's best estimates of CGUs' revenue and costs using sector projections, past experience and future expectations.

In general, these projections cover the next ten years, estimating cash flows for subsequent years by applying reasonable growth rates which, in no case, are increasing nor exceed the average long-term growth rates for the particular sector and country. At the end of 2014 and 2013, projections were extrapolated from the following rates:

G 4		Growth rates (g)		
Country	Currency	2014	2013	
Chile	Chilean peso	2.2% - 5.0%	2.2% - 5.3%	
Argentina	Argentine peso	6.9% - 7.7%	8.6% - 9.0%	
Brazil	Brazilian real	5.0% - 5.9%	5.1% - 6.1%	
Peru	Peruvian nuevo sol	3.4% - 4.4%	3.6% - 4.6%	
Colombia	Colombian peso	4.3% - 5.3%	4.3% - 5.3%	

These flows are discounted to calculate their current value at a before-tax rate that covers the cost of capital for the business activity and the geographic area in which it is being carried out. The current cost of money and the risk premiums generally used among analysts for the business activity and the geographic zone are taken into account to calculate this value.

The following are the before-tax discount rates applied in 2014 and 2013 expressed in nominal terms:

Country	Currency	2	2014	2013		
		Minimum	Maximum	Minimum	Maximum	
Chile	Chilean peso	7.9%	13.0%	7.8%	16.3%	
Argentina	Argentine peso	23.3%	38.9%	39.2%	44.4%	
Brazil	Brazilian real	9.7%	22.7%	9.0%	18.8%	
Peru	Peruvian nuevo sol	7.3%	14.3%	7.3%	13.9%	
Colombia	Colombian peso	8.0%	13.3%	8.5%	14.2%	

If the recoverable amount of the CGU is less than the net carrying amount of the asset, the corresponding provision for impairment loss is recorded for the difference, and charged to "Reversal of impairment loss (impairment loss) recognized in profit or loss" in the consolidated statement of comprehensive income. The provision is first allocated to the CGU's goodwill value, if any, and then to the other assets comprising it, prorated according to the carrying value of each one, limited to its fair value less sales costs, or its value in use; a negative value may not be obtained.

Impairment losses recognized for an asset in prior periods are reversed when there are indications that this loss no longer exists or may have decreased, thus increasing the asset's value with a credit to earnings, limited to the asset's carrying amount if no adjustment had occurred. In the case of goodwill, adjustments that would have been made are not reversible.

e.2) Financial assets

The following procedure is used to determine the need to adjust financial assets for impairment:

- In the case of commercial assets in the electricity generation and transmission segments, as well as in the distribution segment, the Group's policy is to record impairment provisions based on the age of past-due balances. This is the policy generally applied except in cases where a specific collectability analysis is recommended, such as in the case of receivables from publically-owned companies (see Note 9).
- In the case of receivables of a financial nature, impairment is determined on case-by-case basis. As of the date of issuance of these consolidated financial statements, the Company had no significant overdue non-commercial financial assets (see Notes 8 and 22).

f) Leases

In order to determine whether a contract is, or contains, a lease, Enersis examines the economic basis of agreement, to assess whether fulfillment of the contract depends on the use of a specific asset and whether the agreement transfers the right to the use of the asset. If both conditions are met, at the beginning of the contract the Company separates the payments and considerations relating to the lease, at their fair values, from those corresponding to the other components of the agreement.

Leases that substantially transfer all of the risks and benefits inherent to the property are classified as finance leases. All others are classified as operating leases.

Finance leases in which the Group acts as a lessee are recognized when the agreement begins. At that time, the Group records an asset based on the nature of the lease and a liability for the same amount, equal to the fair value of the leased asset or the present value of the minimum lease payments, if the latter is lower. Subsequently, the minimum lease payments are divided between finance expense and principal reduction. The finance expense is recorded in the income statement and distributed over the lease term, so as to obtain a constant interest rate for each period over the balance of the debt pending amortization. The asset depreciates on the same terms as other similar depreciable assets, as long as there is reasonable certainty that the lessee will acquire ownership of the asset at the end of the lease. If no such certainty exists, the asset depreciates over the shorter term between the useful life of the asset and the term of the lease.

In the case of operating leases, payments are recognized as expenses in the case of the lessee and as income in the case of the lessor, both on a straight-line basis, over the term of the lease unless another type of systematic basis of distribution is deemed more representative.

g) Financial instruments

Financial instruments are contracts that give rise to both a financial asset in one company and a financial liability or equity instrument in another company.

g.1) Financial assets other than derivatives

The Group classifies its financial assets other than derivatives, whether permanent or temporary, except for investments accounted for using the equity method (see Note 14) and those held for sale, into four categories:

Trade and other receivables and Accounts receivable from related companies: These are recorded at amortized cost, which is the initial fair value less principal repayments made, plus accrued and uncharged interest, calculated using the effective interest method.

The effective interest method is used to calculate the amortized cost of a financial asset or liability (or group of financial assets or financial liabilities) and is charged to finance income or cost over the relevant period. The effective interest rate is the discount rate that exactly matches the estimated cash flows to be received or paid over the expected life of the financial instrument (or, when appropriate, over a shorter period) to the net carrying amount of the financial asset or financial liability.

- Held-to-maturity investments: Investments that the Group intends to hold and is capable of holding until their maturity
 is accounted for at amortized cost as defined in the preceding paragraph.
- **Financial assets at fair value with changes in net income:** This includes the trading portfolio and those financial assets that have been designated as such upon initial recognition and that are managed and evaluated using fair value criteria. They are valued in the consolidated statement of financial position at fair value, with changes in value recorded directly in income when they occur.
- Available-for-sale financial assets: These are financial assets specifically designated as available for sale or that do not fit within any of the three preceding categories. They are almost all financial investments in equity instruments and financial assets in accordance with IFRIC 12 "Service Concession Arrangements" (see Note 8).

These investments are recorded in the consolidated statement of financial position at fair value when it can be reliably determined. For interests in unlisted companies or companies with very little liquidity, normally the fair value cannot be reliably determined. When this occurs, those interests are valued at acquisition cost or a lesser amount if evidence of impairment exists.

Changes in fair value, net of tax, are recorded in the consolidated statement of comprehensive income: Other comprehensive results, until the investments are disposed of, at which time the amount accumulated in this account for that investment is fully charged to the period's profit or loss.

Should the fair value be less than the acquisition cost, and if there is objective evidence that the asset has been more than temporarily impaired, the difference is recorded directly in the period's losses.

Purchases and sales of financial assets are accounted for using their trade date.

g.2) Cash and cash equivalents

This account within the statement of consolidated financial position includes cash and bank balances, time deposits, and other highly liquid investments (with a maturity of 90 days or less from the time of investment) that are readily convertible to cash and are subject to insignificant risk of changes in value.

g.3) Financial liabilities other than derivatives

Financial liabilities are generally recorded based on cash received, net of any costs incurred in the transaction. In subsequent periods, these obligations are valued at their amortized cost, using the effective interest rate method (see Note 3.g.1).

In the particular case that a liability is the underlying item of a fair value hedge derivative, as an exception, such liability will be valued at its fair value for the portion of the hedged risk.

In order to calculate the fair value of debt, both in the cases when it is recorded in the statement of financial position and for fair value disclosure purposes as seen in Note 22, debt has been divided into fixed interest rate debt (hereinafter "fixed-rate debt") and variable interest rate debt (hereinafter "floating-rate debt"). Fixed-rate debt is that on which fixed-interest coupons established at the beginning of the transaction are paid explicitly or implicitly over its term. Floating-rate debt is that issued at a variable interest rate, i.e., each coupon is established at the beginning of each period based on the reference interest rate. All debt has been valued by discounting expected future cash flows with a market interest rate curve based on the payment currency.

g.4) Derivative financial instruments and hedge accounting

Derivatives held by the Group are primarily transactions entered into to hedge interest and/or exchange rate risk, intended to eliminate or significantly reduce these risks in the underlying transactions being hedged.

Derivatives are recorded at fair value as of the date of the statement of financial position as follows: if their fair value is positive, they are recorded within "Other financial assets"; and if their fair value is negative, they are recorded within "Other financial liabilities." For derivatives on commodities, the positive value is recorded in "Trade and other receivables," and negative values are recorded in "Trade and other liabilities."

Changes in fair value are recorded directly in income except when the derivative has been designated for accounting purposes as a hedge instrument and all of the conditions established under IFRS for applying hedge accounting are met, including that the hedge be highly effective. In this case, changes are recorded as follows:

- **Fair value hedges:** The underlying portion for which the risk is being hedged is valued at its fair value, as is the hedge instrument, and any changes in the value of both are recorded in the comprehensive income statement by netting the effects in the same comprehensive income statement account.
- Cash flow hedges: Changes in the fair value of the effective portion of derivatives are recorded in an equity reserve known as "Reserve for cash flow hedges." The cumulative loss or gain in this account is transferred to the comprehensive income statement to the extent that the underlying item impacts the comprehensive income statement because of the hedged risk, netting the effect in the same comprehensive income statement account. Gains or losses from the ineffective portion of the hedge are recorded directly in the comprehensive income statement.

A hedge is considered highly effective when changes in the fair value or in the cash flows of the underlying item directly attributable to the hedged risk are offset by changes in the fair value or the cash flows of the hedging instrument, with effectiveness ranging from 80% to 125%.

The Company does not apply hedge accounting to its investments abroad.

As a general rule, long-term commodity purchase or sale agreements are recorded in the consolidated statement of financial position at their fair value as of period end, recording any differences in value directly in income, except when all of the following conditions are met:

- The sole purpose of the agreement is for the Group's own use, which is understood, in the case of fuel purchase agreements, as fuel to be used to generate electricity; in the case of electrical energy purchased for sale, as electricity to be sold to the end user; and in the case of electricity sales, it is understood as sales to the end user.
- The Group's future projections justify the existence of these agreements for its own use.
- Past experience with agreements shows that they have been utilized for the Group's own use, except in certain isolated
 cases when they had to be used for exceptional reasons or reasons associated with logistical issues beyond the control and
 projection of the Group.
- The agreement does not stipulate settlement by differences and the parties have not made it a practice to settle similar contracts by differences in the past.

The long-term commodity purchase or sale agreements maintained by the Group, which are mainly for electricity, fuel, and other supplies, meet the conditions described above. Thus, the purpose of fuel purchase agreements is to use them to generate electricity, the electricity purchase contracts are used to make sales to end-customers, and the electricity sale contracts are used to sell the company's own product.

The Company also evaluates the existence of derivatives embedded in contracts or financial instruments to determine if their characteristics and risk are closely related to the principal contract, provided that when taken together they are not being accounted for at fair value. If they are not closely related, they are recorded separately and changes in value are accounted for directly in the comprehensive income statement.

g.5) Fair value of derivative instruments

The fair value of the various derivative financial instruments is calculated as follows:

- For derivatives traded on an active market, by its quoted price as of year-end.
- The Group values derivatives not traded on active markets by using the discounted cash flow method and generally accepted options valuation models, based on current and future market conditions as of year-end. It also adjusts the value according to its own credit risk (Debt Valuation Adjustment, DVA), and the counterparty risk (Credit Valuation Adjustment, CVA). These CVA and DVA adjustments are measured on the basis of the potential future exposure of the instrument (creditor or borrower position) and the risk profile of both the counterparties and the Group itself.

g.6) Derecognition of financial assets and liabilities

Financial assets are derecognized when:

- The contractual rights to receive cash flows related to the financial asset expire or have been transferred or, if the contractual rights are retained, the Group has assumed a contractual obligation to pay these cash flows to one or more receivers.
- The Group has substantially transferred the risks and rewards of ownership of the financial asset, or, if it has neither transferred nor retained substantially all the risks and rewards, when it does not retain control over the asset.

Transactions in which the Group retains substantially all the inherent risks and rewards of ownership of the transferred asset, it continues recognizing the transferred asset in its entirety and recognizes a financial liability for the consideration received. Transactions costs are recognized in profit and loss by using the effective interest method (see Note 3.g.1).

Financial liabilities are derecognized when they are extinguished, that is, when the obligation arising from the liability has been paid or cancelled, or has expired.

g.7) Offsetting financial assets and liabilities.

The Group offsets financial assets and liabilities and the net amount is presented in the statement of financial position only when:

- There is a legally enforceable right to offset the recognized amounts; and
- There is an intention to settle on a net basis, or to realize the asset and settle the liability simultaneously.

h) Measurement of fair value

The fair value of an asset or liability is defined as the price that would be received from the sale of an asset or paid to transfer a liability in an organized transaction between participants on the market on the date of measurement.

Fair value measurement assumes that the transaction to sell an asset or transfer a liability occurs in the principal market, namely, the market with the highest transaction volume for that asset or liability. In the absence of a principal market, it is assumed that the transaction is carried out in the most advantageous market available to the entity, namely, the market that maximizes the amount that would be received on selling the asset or minimizes the amount that would be paid on transferring the liability.

To determine fair value, the Group uses valuation techniques that are appropriate for the circumstances and for which there are sufficient data to conduct the measurement. The Group maximizes the use of relevant observable data and minimizes the use of unobservable data.

Considering the hierarchy of the data used in these valuation techniques, the assets and liabilities measured at fair value can be classified into the following levels:

- Level 1: Quoted price (unadjusted) in active markets for identical assets or liabilities;
- <u>Level 2</u>: Inputs other than quoted prices included within Level 1 that are observable for the assets or liabilities, either directly (i.e. as prices) or indirectly (i.e. derived from prices). The methods and hypotheses used to determine the fair values at Level 2 by type of financial asset or financial liability take into consideration estimated future cash flows discounted at zero coupon interest rate curves for each currency. All the valuations described are carried out using external tools such as "Bloomberg"; and
- Level 3: Inputs for assets or liabilities that are not based on observable market data (unobservable inputs).

The Group takes into account the characteristics of the asset or liability when measuring fair value, in particular:

- For non-financial assets, fair value measurement takes into account the ability of a market participant to generate economic benefits by using the asset to the maximum of its potential or by selling it to another market participant which would use the asset to the maximum of its potential;
- For liabilities and equity instruments, the fair value assumes that the liability is not settled and equity instrument is not canceled, or otherwise extinguished at the measurement date. The fair value of the liability reflects the effect of default risk, namely, the risk that an entity will not fulfill the obligation, which includes but is not limited to, the company's own credit risk;

- In the case of financial assets and financial liabilities that have balanced positions with respect to market risk or credit risk with a counterparty, it is possible to measure the fair value on a net basis. However, this must be consistent with the manner in which market participants would price the net risk exposure on the measurement date.

i) Investments accounted for using the equity method

The Group's interests in joint ventures and associates are recorded using the equity method.

Under the equity method, an investment in an associate or joint venture is initially recorded at cost. As of the acquisition date, the investment is recorded in the statement of financial position based on the share of its equity that the Group's interest represents in its capital, adjusted for, if appropriate, the effect of transactions with subsidiaries plus any goodwill generated in acquiring the company. If the resulting amount is negative, zero is recorded for that investment in the statement of financial position, unless the Group has a present obligation (either legal or implicit) to support the company's negative equity situation, in which case a provision is recorded.

Goodwill from the associate or joint venture is included in the book value of the investment. It is not amortized but is subject impairment testing as part of the overall investment carrying value when there are indicators of impairment.

Dividends received from these companies are deducted from the value of the investment, and any profit or loss obtained from them to which the Group is entitled based on its interest is recorded under "Share of profit (loss) of associates accounted for using equity method."

Appendix No. 3, "Enersis Group Associated Companies and Joint Ventures," included in these consolidated financial statements, provides information about the relationship of Enersis with each of these entities.

j) Inventories

Inventories are valued at their weighted average acquisition price or the net realizable value, whichever is lower.

k) Non-current assets held for sale and discontinued operations

The Group classifies the following as "Non-current assets held for sale": property, plant and equipment; intangible assets; investments accounted for using the equity method, joint ventures, and disposal groups (a group of assets to be disposed of and the liabilities directly associated with those assets), if, as of the date of the consolidated financial statements, the Group has taken active measures for their sale and estimates that such a sale is highly probable.

These held-for-sale assets or disposal groups are valued at the lower of their book value or estimated sale value less selling costs. Depreciation and amortization on these assets cease when they meet the criteria to be classified as non-current assets held for sale.

Non-current assets held for sale and the components of the disposal groups classified as held for sale are presented in the consolidated statement of financial position as a single line item within assets called "Non-current assets or disposal groups classified as held for sale," and the respective liabilities are presented as a single line item within liabilities called "Liabilities included in disposal groups classified as held for sale."

The Group classifies as "Discontinued operations" those separate major lines of business that have been sold or disposed of in another way, or those that may be classified as held for sale, including other assets that are part of the same coordinated sales or disposal plan. In the same way, entities that have been acquired solely in order to be resold are also considered "Discontinued operations."

The components of profit or loss after taxes from discontinued operations are presented as a single line item in the consolidated comprehensive income statement as "Net income from discontinued operations.

1) Treasury shares

Treasury shares are deducted from equity in the consolidated statement of financial position and valued at acquisition cost.

The gains and losses from the disposal of treasury shares are recorded directly in "Equity – Retained earnings", without affecting the profit or loss for the fiscal year. As of December 31, 2014, there are no treasury shares, and no transactions with treasury shares were conducted during fiscal years 2014 and 2013.

m) Provisions

Obligations existing as of the date of the consolidated financial statements resulting from past events which may negatively impact the Group's equity, and whose amount and timing of payment are uncertain, are recorded as provisions in the consolidated statement of financial position at the present value of the most likely amount that it is believed that the Group will have to disburse to settle the obligation.

Provisions are quantified using the best information available as of the date of issuance of the consolidated financial statements regarding the consequences of the event causing the provision and are re-estimated at each subsequent accounting close.

m.1) Provisions for post-employment benefits and similar obligations

Some of the Group's subsidiaries have pension and similar obligations to their employees. Such obligations, which combine defined benefits and defined contributions, are basically formalized through pension plans, except for certain non-monetary benefits, mainly electricity supply commitments, which, due to their nature, have not been externalized and are covered by the related in-house provisions.

For defined benefit plans, the cost of providing benefits is determined using the Projected Unit Credit Method, with actuarial valuations being carried out at the end of each reporting period. Past service costs relating to changes in benefits are recognized immediately.

The defined benefit plan obligations in the statement of financial position represent the present value of the accrued obligations, adjusted, once the fair value of the different plans' assets has been deducted, if applicable.

For each of the plans, any positive difference between the actuarial liability for past services and the plan assets is recognized under line item "Provisions for employee benefits" within current and non-current liabilities in the consolidated statement of financial position, and any negative difference is recognized under line item "Other financial assets" within non-current assets in the consolidated statement of financial position, provided that the negative difference is recoverable by the Group, usually through a reduction in future contributions and taking into consideration the limit established in IFRIC 14, "IAS 19 The limit on a defined benefit asset, minimum funding requirements, and their interaction."

Actuarial gains and losses arising in the measurement of both the plan liabilities and the plan assets, including the limit in IFRIC 14, are recognized directly within "Other comprehensive income".

Contributions to defined contribution benefit plans are recognized as an expense in the consolidated statement of comprehensive income when the employees have rendered their services.

n) Conversion of balances to foreign currency

Transactions carried out by each company in a currency other than its functional currency are recorded using the exchange rates in effect as of the date of each transaction. During the year, any differences that arise between the exchange rate recorded in accounting and the rate prevailing as of the date of collection or payment are recorded as "Foreign currency exchange differences" in the comprehensive income statement.

Likewise, at the end of each period, balances receivable or payable in a currency other than each company's functional currency are converted using the period-end exchange rate. Any valuation differences are recorded as "Foreign currency exchange differences" in the comprehensive income statement.

The Group has established a policy to hedge the portion of its subsidiaries' revenue that is directly linked to variations in the US dollar by obtaining financing in this currency. Exchange differences related to this debt, as they are cash flow hedge transactions, are charged, net of taxes, to a reserve account in equity and recorded in income during the period in which the hedged cash flows are realized. This term has been estimated at ten years.

o) Current/non-current classification

In these consolidated statements of financial position, assets and liabilities expected to be recovered or settled within twelve months are presented as current items, except for post-employment and other similar obligations, and those assets and liabilities expected to be recovered or settled in more than twelve months are presented as non-current items. Deferred income tax assets and liabilities are classified as non-current.

Should the Company have any obligations that mature in less than twelve months but can be refinanced over the long term at the Company's discretion, through unconditionally available credit agreements with long-term maturities, such obligations could be classified as long-term liabilities.

p) Income taxes

Income tax expense for the period is determined as the sum of current taxes from the Group's different subsidiaries and results from applying the tax rate to the taxable base for the period, after allowable deductions have been made, plus any changes in deferred tax assets and liabilities and tax credits, both for tax losses and deductions. Differences between the book value and tax basis of assets and liabilities generate deferred tax asset and liability balances, which are calculated using tax rates expected to be in effect when the assets and liabilities are realized or settled. Considered for this purpose are rates that have been approved by the end of the period reported on, or whose approval process is practically complete.

Deferred tax assets are recognized for all deductible temporary differences, tax losses and unused tax credits to the extent that it is probable that sufficient future taxable profits exist to recover the deductible temporary differences and make use of tax credits. This is the case unless the deferred tax asset relating to the deductible temporary difference arises from the initial recognition of an asset or liability that:

- Did not arise from a business combination, and
- At initial recognition affected neither accounting profit nor taxable profit (loss).

In respect of deductible temporary differences associated with investments in subsidiaries, associates and joint arrangements, deferred tax assets are recognized only to the extent that it is probable that the temporary differences will reverse in the foreseeable future and taxable profits will be available against which the temporary differences can be utilized.

Deferred tax liabilities are recognized for all temporary differences, except those derived from the initial recognition of goodwill and those that arose from valuing investments in subsidiaries, associates and joint ventures in which the Group can control their reversal and where it is likely that they will not be reversed in the foreseeable future.

Current tax and changes in deferred tax assets or liabilities are recorded in the statement of net income or in Total equity within the statement of financial position, depending on where the gains or losses that triggered these tax entries have been recognized.

Any deductions that can be applied to current tax liabilities are credited to earnings within the line item "Income tax expenses", except when doubts exist about their tax realization, in which case they are not recognized until they are effectively realized, or when they correspond to specific tax incentives, in which case they are recorded as grants.

At each accounting period close, the Company reviews the deferred taxes it has recorded, both assets and liabilities, and makes any necessary corrections based on the results of this analysis.

Deferred tax assets and deferred tax liabilities are offset in the statement of financial position if regulations allow current tax assets to be offset with current tax liabilities, and only when the deferred taxes are related to income taxes payable to the same tax authority.

q) Revenues and expense recognition

Revenue is recognized when the gross inflow of economic benefits arising in the course of the Group's ordinary activities in the period occurs, provided that this inflow of economic benefits results in an increase in total equity that is not related to contributions from equity participants and that these benefits can be measured reliably.

Revenues and expenses are recognized on an accrual basis and depending on the type of transaction, the following criteria for recognition are taken:

- Generation and transmission of electricity: revenue is recorded according to the physical delivery of energy and power, at prices established in the respective contracts, at prices stipulated in the electricity market by applicable regulations or at marginal cost determined on the spot market, as the case. This revenue includes an estimate of the service provided and not billed until the closing date (see Note 2.3).
- Distribution of electricity: revenue is recorded as a function of the amount of energy supplied to customers during the
 period, at prices established in the respective contracts or at prices stipulated in the electricity market by applicable
 regulations, as the case. This revenue includes an estimate of the energy supplied not yet read the meters customer (see
 Note 2.3).

Revenue is recognized based on the economic substance of the transaction and are recognized when all are met and each of the following conditions:

- the entity has transferred to the buyer the significant risks and rewards of ownership of the goods;
- the entity retains neither continuing managerial involvement to the degree usually associated with ownership nor effective control over the goods sold;
- the amount of revenue can be measured reliably;
- it is probable that the economic benefits associated with the transaction will flow to the entity; and
- the costs incurred or to be incurred in respect of the transaction can be measured reliably.

Revenue is measured at the fair value of the consideration received or receivable that gives rise to the revenue.

In arrangements under which the Group will perform multiple revenue-generating activities (multiple-element arrangement), the recognition criteria are applied to the separately identifiable components of the transaction in order to reflect the substance of the transaction or to two or more transactions together when they are linked in such a way that the commercial effect cannot be understood without reference to the series of transactions as a whole.

Revenue associated with the rendering of services is only recognized if it can be estimated reliably, based on the stage of completion of the service rendered at the date of the statement of financial position.

The Group excludes from the revenue figure gross inflows of economic benefits it receives when it acts as an agent or commission agent on behalf of third parties, and only recognizes as revenue economic benefits received for its own activity.

When goods or services are exchanged or swapped for goods or services of a similar nature and value, the exchange is not regarded as a revenue-generating transaction.

The Group records the net amount of non-financial asset purchase or sale contracts settled for the net amount of cash or through some other financial instruments. Contracts entered into and maintained for the purpose of receiving or delivering these non-financial assets are recognized on the basis of the contractual terms of the purchase, sale, or usage requirements expected by the entity.

Interest income (expense) is recognized at the effective interest rate applicable to the outstanding principal over the repayment period.

Expenses are recognized on an accruals basis, immediately in the event of expenditures that do not generate future economic benefits or when not meet the requirements for recording them as assets.

r) Earnings per share

Basic earnings per share are calculated by dividing net income attributable to shareholders of the Parent Company (the numerator) by the weighted average number of ordinary shares outstanding (the denominator) during the period, excluding the average number of shares of the Parent Company held by the Group, if any.

During the 2014, 2013 and 2012 fiscal years, the Group did not engage in any transaction of any kind with potential dilutive effects leading to diluted earnings per share that could differ from basic earnings per share.

s) Dividends

Article 79 of the Chilean Companies Act establishes that, unless unanimously agreed otherwise by the shareholders of all issued shares, listed corporations must distribute a cash dividend to shareholders on a yearly basis, prorated by the shares owned or the proportion established in the company's by-laws if there are preferred shares, of at least 30% of net income for each period, except when accumulated losses from prior years must be absorbed.

As it is practically impossible to achieve a unanimous agreement given Enersis' highly fragmented share capital, as of the end of each year the amount of the minimum statutory dividend obligation to its shareholders is determined, net of interim dividends approved during the fiscal year, and then accounted for in "Trade and other current payables" and "Accounts payable to related companies," as appropriate, and charged to Equity.

Interim and final dividends are deducted from Equity as soon as they are approved by the competent body, which in the first case is normally the Company's Board of Directors and in the second case is the Ordinary Shareholders' Meeting.

t) Share issuance and placement expenses

Share issuance and placement expenses, when these are incremental expenses directly attributable to the transaction, are recognized directly in net equity as a deduction from "Share premiums," net of any applicable taxes. If the share premium account has a zero balance or if the costs described exceed the balance, they are recognized in "Other reserves."

u) Cash flow statement

The cash flow statement reflects changes in cash and cash equivalents that took place during the period, determined with the direct method. It uses the following expressions and corresponding meanings:

- Cash flows: inflows and outflows of cash or cash equivalents, which are defined as highly liquid investments maturing in less than three months with a low risk of changes in value.
- **Operating activities:** the principal revenue-producing activities of the Group and other activities that cannot be considered investing or financing activities.
- **Investing activities:** the acquisition and disposal of long-term assets and other investments not included in cash and cash equivalents.
- **Financing activities:** activities that result in changes in the size and composition of the total equity and borrowings of the Group.

4. SECTOR REGULATION AND ELECTRICITY SYSTEM OPERATIONS

4.1 Regulatory framework:

Chile

The electricity sector is regulated by the General Law of Electrical Services (Chilean Electricity Law), also known as DFL No. 1 of 1982, of the Ministry of Mining, whose compiled and coordinated text was established in DFL No. 4 issued in 2006 by the Ministry of Economy (the Electricity Law), as well as by an associated Regulation (D.S. No. 327 issued in 1998). Three government bodies are primarily responsible for enforcing this law: the National Energy Commission (CNE), which has the authority to propose regulated tariffs (node prices) and to draw up indicative plans for the construction of new generating units; the Superintendency of Electricity and Fuels (SEF), which supervises and oversees compliance with the laws, regulations, and technical standards that govern the generation, transmission, and distribution of electricity, as well as liquid fuels, and gas; and the Ministry of Energy, which is responsible for proposing and guiding public policies on energy matters. It also oversees the SEF, the CNE, and the Chilean Commission for Nuclear Energy (ChCNE), thus strengthening coordination and allowing for an integrated view of the energy sector. The Ministry of Energy also includes the Agency for Energy Efficiency and the Center for Renewable Energy, (Centro de Energías Renovables - CER), which in November 2014 was replaced by the National Center for Innovation and Development of Sustainable Energy (Centro Nacional para la Innovación y Fomento de las Energías Sustentables - CIFES). The Chilean Electricity Law has also established a Panel of Experts whose main task is to resolve potential discrepancies among the players in the electricity market, including electricity companies, system operators, regulators, etc.

From a physical viewpoint, the Chilean electrical sector is divided into four electrical grids: the *Sistema Interconectado Central* (SIC), the *Sistema Interconectado del Norte Grande* (SING), and two separate medium-size grids located in southern Chile, one in Aysén and the other in Magallanes. The SIC, the main electrical grid, runs 2,400 km longitudinally and connects the country from Taltal in the north to Quellon, on the island of Chiloe in the south. The SING covers the northern part of the country, from Arica down to Coloso, covering a length of some 700 km. A law was passed on January 8, 2014, which will allow the SIC to be connected to the SING.

The electricity industry is organized into three business segments: generation, transmission, and distribution, all operating in an interconnected and coordinated manner, and whose main purpose is to supply electrical energy to the market at minimum cost while maintaining the quality and safety service standards required by the electrical regulations. As essential services, the power transmission and distribution businesses are natural monopolies; these segments are regulated as such by the electricity law, which requires free access to networks and regulates rates.

Under the Chilean Electricity Law, companies engaged in generation and transmission on an interconnected electrical grid must coordinate their operations through a centralizing operating agent, the Centro de Despacho Económico de Carga (CDEC), in order to operate the system at minimum cost while maintaining a reliable service. For this reason, the CDEC plans and operates the system, including the calculation of the so-called "marginal cost," which is the price assigned to energy transfers among power generating companies.

Therefore, a company's decision to generate electricity is subject to the CDEC's operation plan. On the other hand, each company is free to decide whether to sell its energy to regulated or unregulated customers. Any surplus or deficit between a company's sales to its customers and its energy supply is sold to, or purchased from, other generators at the spot market price.

A power generating company may have the following types of customers:

(i) Distribution companies that supply power to regulated customers: This distribution is to residential and commercial consumers and small and medium-size businesses with a connected capacity equal to or less than 500 kW located in the concession area of a distribution company. Customers that consume from 500 kW to 2,000 kW₁ may choose to be regulated or unregulated clients. Until 2009, the transfer prices between generators and distribution companies for supplying power to regulated customers were capped at a maximum value called the node price, which is regulated by the Ministry of Energy. Node prices are set every six months, in April and October, based on a report prepared by the CNE that takes into account projections of expected marginal costs in the system over the next 48 months for the SIC and 24 months for the SING. Beginning in 2010, and as the node price contracts begin to expire, the transfer prices between generators and distributors is being replaced by the results of regulated bidding processes, with a price cap set by the authority every six months.

- (1) At the end of 2014, a legal amendment to the articles of the electricity law is going through Congress. One of the modifications involves raising the limit from 2,000 to 5,000 kW.
- (ii) Unregulated customers: Those customers, mainly industrial and mining companies, with a connected capacity of over 2,000 kW (see footnote N° 1). These consumers can freely negotiate prices for electrical supply with generators and/or distributors. Customers with capacity between 500 and 2,000 kW (see footnote N° 1 above), as indicated in the preceding paragraph, have the option to contract energy at prices agreed upon with their suppliers or be subject to regulated prices, with a minimum stay of at least four years under each pricing system.
- (iii) Spot market: This represents energy and capacity transactions among generating companies that result from the CDEC's coordination to keep the system running as economically as possible, where the surpluses (deficits) between a generator's energy supply and the energy it needs to comply with business commitments are transferred through sales (purchases) to (from) other generators in the CDEC. In the case of energy, transfers are valued at the marginal cost, while node prices for capacity are set every semester by the regulators.

In Chile, the capacity that must be paid to each generator depends on an annual calculation performed by the CDEC to determine the firm capacity of each power plant, which is not the same as the dispatched capacity.

Beginning in 2010 with the enactment of Law 20,018, distribution companies must have enough supply permanently available to cover their entire demand projected for a period of three years; to do so, they must carry out long-term public bidding processes.

On May 15, 2014, the Minister of Energy presented the "Energy Agenda," a document outlining general guidelines for the energy policy of the new government.

On September 29, 2014 a Tax Reform was approved which emphasizes the creation of so-called green tax to be levied on air emissions of particulate matter (PM), nitrogen oxides (NOx), sulfur dioxide (SO2) and carbon dioxide (CO2). The tax will be US\$5/ton for CO2 emissions.

Argentina

Argentina has shown signs of intervention in the electricity market since the crisis of 2002. Under the previous regulations, generators sold to distributors at prices obtained from centralized calculations of the average spot market price. The distributers' purchase price was the average price forecast for the next six months, called the Seasonal Price (*Precio Estacional*). Any differences between the Seasonal Price (the purchase price) and the actual spot price (the selling price) was charged to the Seasonal Fund (*Fondo Estacional*) managed by the Electricity Wholesale Market Administration Company (CAMMESA - Compañía Administradora del Mercado Mayorista Eléctrico).

However, after the 2002 crisis, the authorities changed the price-setting criteria, bringing the marginal pricing system to an end. First, marginal prices were calculated without taking into consideration the natural gas shortages. In effect, despite the fact that generation is dispatched on the basis of the fuels actually used, Resolution SE 240/2003 establishes that the marginal price is to be calculated taking into consideration all of the generation units as if there were no restrictions in effect on natural gas supplies. In addition, the expense of water is not included in the calculations if its opportunity cost is higher than the cost of generating power with natural gas. Second, it established a spot price ceiling of Ar\$120/MWh. However, CAMMESA pays the actual variable costs of the thermal plants that run on liquid fuels through the Temporary Dispatch Cost Overruns program.

In addition, as the dollarized economy was devalued and went back to the Argentine peso, payment for capacity fell from US\$10 to Ar\$10 per MWh. Capacity payments have subsequently risen slightly, to Ar\$12 pesos.

Additionally the freezing of prices paid by distributors caused a gap in relation to actual generation costs, resulting in various types of special agreements for recovering costs, in accordance with regulations in force.

It was in this context that the government announced in 2012 its plan to change the current regulatory framework for one based on an average cost scheme.

Resolution 95/2013 was published in March of 2013, significantly changing the system for generators' remunerations and setting new prices for capacity depending on the type of technology used and availability. It also set new values for paying for non-fuel variable costs, as well as additional remuneration for energy generated.

In May 2013, the Group's generating companies (Endesa Costanera and Hidroeléctrica El Chocón) accepted the terms of Resolution SE 95/2013.

This resolution marked the end of marginal pricing as a payment system in the Argentine power generation market and established, instead, payment by type of technology and size of plant. For each case, it recognizes fixed costs (determined on the basis of fulfillment of availability) and variable costs, plus an additional remuneration (the two parts are determined on the basis of the energy generated). Part of the additional remuneration will be placed in a trust for future investments.

In principle, commercial management and fuel dispatch will be in the hands of CAMMESA; Terminal Market agreements cannot be extended or renewed, and large users, once their respective contracts are up, must purchase their supply from CAMMESA. However, the Energy Secretariat, in Note SE 1807/13, gave generators the opportunity to express their intention to continue handling collections for their entire contract portfolio, thus ensuring a certain amount of cash flow and a continuing relationship with the customer.

It is also important to mention that Endesa Costanera has availability contracts signed in 2012 that are still in effect, as well as combined cycle contracts (until 2015) and steam generation contracts (until 2019) that will enable the company to implement plan for investing in the Costanera plant generation units in order to optimize the reliability and availability of that plant. The contracts also include payment of the commitments under the Long-Term Service Agreement (LTSA) for the plant's combined cycles.

Through Resolution 529/2014, the Energy Secretariat updated generators' remuneration, which had been in effect since they were set in February 2013 under Resolution 95/2013. The new resolution increased recognition of fixed costs for combined cycle and large hydroelectric plants by 25%, and adjusted variable costs by 41% for thermal plants and 25% for hydroelectric plants. A new variable remuneration was set for biodiesel-fired plants. The additional remuneration increased 25% for thermal plants, and a new charge of Ar\$21/MWh was set for one-time maintenance for combined cycle and Ar\$24/MWh for other thermal generation plants. The resolution is retroactive to February 2014.

Brazil

Legislation in Brazil allows the participation of private capital in the electricity sector, upholds free competition among companies in electricity generation, and defines criteria to avoid certain levels of economic concentration and/or market practices that may cause a decline in free competition.

Based on the contract requirements as stated by distribution companies, the Ministry of Energy has been involved in planning the expansion of the electricity system, setting capacity quotas by technology on the one hand and, on the other, promoting separate tender processes for thermal, hydraulic or renewable energies, or directly holding tender processes for specific projects. The operation is being coordinated in a centralized fashion in which one independent operator coordinates centralized load dispatch based on variable production costs and seeks to guarantee to meet demand at the minimum cost for the system. The price at which transactions take place on the spot market is called the Difference Liquidation Price (*Precio de Liquidación de las Diferencias*, PLD), which takes into account the players' aversion to risk. Generation companies sell their energy on the regulated or unregulated market through contracts, and they trade their surpluses or deficits on the spot market. The free market is aimed at large users, with a limit of 3,000 kW or 500 kW if they purchase energy produced with renewable resources.

In the unregulated market, suppliers and their clients directly negotiate energy purchase conditions. In the regulated market, in contrast, where distribution companies operate, energy purchases must go through a tender process coordinated by the National Electricity Agency (ANEEL). In this way, the regulated purchase price used in the determination of tariffs to end users is based on average prices of open bids, and there are separate bidding processes for existing and new energy. Bidding processes for new energy contemplate long-term generation contracts in which new generation projects must cover the growth of demand foreseen by distributors. The open bids for existing energy consider shorter contractual terms and seek to cover the distributors' contractual needs arising from the expiry of prior contracts. Each bidding process is coordinated centrally. Authorities set maximum prices and, as a result, contracts are signed where all distributors participating in the process buy pro rata from each offering generator.

On November 25, 2014, the ANEEL approved the new PLD limits for 2015. The maximum limits (decreased from R\$823 to R\$388/MWh) and the minimum (increased from R\$16 to R\$30/MWh). The decision was the result of extensive debate, which began with Public Consultation number 09/2014 and later with Public Hearing number 54/2014.

The main effect of the new limit is to reduce the financial impact for distributors of potential future risks when contracting energy on the spot market, as in 2014 the spot price was at its maximum for much of the year. The new maximum price also mitigates the risk of unrecoverable economic and financial losses for generators, when production is below contract values. However, the possibility of selling excess energy at higher prices decreases. Currently generators can divide their excess energy across the months of the year, to boost their revenues by allocating more energy to those months where higher prices are expected, as the ceiling is lower.

These regulatory mechanisms ensure the creation of regulatory assets, whose rate adjustment for deficits in 2014 will take place in the tariff adjustments starting in 2015 (March for Ampla and April for Coelce). This mechanism has existed since 2001, and is called the Compensation Clearing Account - Part A (*Cuenta de Compensación de Valores – Parte A*, "CVA").

On December 10, 2014 an addendum was signed to the concession contract for distributors in Brazil (Ampla and Coelce), which allows these regulatory assets (CVA's and others) to be included in indemnizable assets at the end of the concession, and if this is not possible over time, it allows compensation through tariffs.

Colombia

The Public Utility Law (*Ley de Servicios Públicos Domiciliarios*, Law 142) and the Electricity Law (*Ley Eléctrica*, Law 143) were passed in 1994 establishing the new framework ordered by the Constitution. These laws set out the general criteria and policies that are to govern public utility service provision in the country, as well as the procedures and mechanisms for regulating, monitoring and overseeing them.

The Electricity Law puts the constitutional focus into practice, regulating the generation, transmission, distribution and sale of electricity, creating the market and competitive environment, strengthening the industry and setting the boundaries for government intervention. Taking into account the nature of each activity or business, general guidelines were established for developing the regulatory framework, creating and implementing the rules that would allow for free competition in the power generation and sales industries, while the directives for the transmission and distribution industries were geared toward treating these activities as monopolies while seeking out competitive conditions wherever possible.

The main institution in the electricity sector is the Mining and Energy Ministry, whose Mining Energy Planning Unit, (Unidad de Planeación Minero Energética, UPME) draws up the national Energy Plan and the Generation and Transmission Expansion Plan. The Energy and Gas Regulatory Commission (Comisión de Regulación de Energía y Gas, CREG) and the Public Service Superintendency (Superintendencia de Servicios Públicos, SSPD) regulate and oversee, respectively, the companies in the industry, and the Superintendency of Industry and Commerce is the national authority for free trade protection issues.

The electricity industry operates on the basis of electricity-selling companies and the large consumers being able to buy and sell energy through bilateral contracts or on a short-term energy exchange market, called the energy exchange, that operates freely according to supply and demand conditions. In addition, long-term auctions of Firm Energy within a Reliable Charge scheme are carried out to promote the expansion of the system. The market is operated and administered by XM, which is in charge of the National Dispatch Center (*Centro Nacional de Despacho*, CND), and the Commercial Interchange System Manager (*Administrador del Sistema de Intercambios Comerciales*, ASIC).

Peru

The Electricity Concessions Law and its regulations, the Law to Ensure Efficient Development of Electricity Generation (Law 28,832), the Electricity Industry Antimonopoly and Oligopoly Law, the Technical Standard for Electricity Service Quality, the Environmental Protection Regulations for Electricity Activities, the Law Creating the Energy and Mining Investment Supervisory Agency (Osinergmin) and its regulations, and the Regulations for Unregulated Electricity Users all comprise the main legislation in the regulatory framework for doing business in the power industry in Peru.

Law 28,832, whose purpose is to ensure enough efficient power generation to reduce the risk of price volatility and rationing, promotes the establishment of market prices based on competition, planning and ensuring a mechanism that guarantees expansion of the transmission grid, and also allows Large Unregulated Users and Distributors to participate in the short-term market. Accordingly, the law promotes tender processes for long-term power supply contracts at firm prices in order to encourage investment in efficient generation and contracts with distribution companies. Distribution companies must begin the tender processes at least three years ahead of time in order to keep Regulated Users' demand covered.

Expansion in transmission must be planned through a binding Transmission Plan drawn up by the COES SINAC and approved first by the Osinergmin and then by the Energy and Mining Ministry. There are two types of system: a) the Guaranteed Transmission System, which is paid for by the demand; and b) the Complementary Transmission System, which is financed jointly by the generation companies and by the demand.

The purpose of the COES SINAC is to coordinate operations at the lowest possible cost while ensuring a reliable system and the best use of energy resources, to plan transmission and to manage the short-term market. It is made up of generation, transmission and distribution companies and Large Unregulated Users (those with demand of 10 MW or higher) who belong to the National Interconnected Grid (*Sistema Eléctrico Interconectado Nacional*).

Generation companies may sell their power to: (i) Distribution companies through tender contracts or regulated bilateral contracts; (ii) Unregulated clients; and (iii) the spot market, where surplus energy is traded among generation companies. Generation companies are also paid for the firm capacity they contribute to the system regardless of their dispatch.

Peru's spot price, given the definition of its ideal marginal cost, does not necessarily reflect the costs in the system, as it does not consider the current shortages in the natural gas and electricity transport system. Furthermore, it sets a ceiling price for the market. This was established in an emergency regulation in 2008 (Emergency Decree 049 of 2008) that will remain in effect at least until the end of 2016.

Non-Conventional Renewable Energy

- *In Chile*, Law 20,257 was enacted in April of 2008 to encourage the use of Non-Conventional Renewable Energy (NCRE). The principal aspect of this law is that at least 5% of the energy sold by generation companies to their customers must come from renewable sources between years 2010 and 2014. This requirement progressively increases by 0.5% from year 2015 until 2024, when a 10% renewable energy requirement will be reached. This law was amended in 2013 by Law 20,698, dubbed the "20/25 law," as it establishes that by 2025, 20% of power supplied will be generated by NCRE. It does not change the previous law's plan for supplying power under agreements in effect in July 2013.
- *In Brazil*, the ANEEL holds auctions by technology considering the expansion plan set by the EPE, the planning agency, so that the target amount set for non-conventional renewable energy capacity is met.
- *In Colombia*, Law 697 was issued in 2001 by the Program for the Rational and Efficient Use of Energy and Other Forms of Non-Conventional Energy (*Programa de Uso Racional y Eficiente de la Energía y demás formas de Energías No Convencionales* PROURE). Subsequently, indicative targets were defined for non-conventional renewable energy of 3.5% for 2015 and 6.5% for 2020. Law 1715 was enacted in 2014, which created a legal framework for the development of non-conventional renewable energy, in which guidelines for declarations of public interest, as well as tax, tariff and accounting incentives were established. The competent authorities are expected to develop detailed regulations supporting this Act during 2015.

- *In Peru*, a target of 5% has been set as the NCRE'share in the country's energy system. It is a nonbinding target and the regulatory agency, the Osinergmin, holds differential auctions by technology to help reach the goal.

Limits on integration and concentration

In general, all of the countries have legislation in effect that defends free competition and, together with specific regulations that apply to the electricity market, defines criteria to avoid certain levels of economic concentration and/or abusive market practices.

In principle, the regulators allow the participation of companies in different activities (e.g. generation, distribution, and commercialization) as long as there is an adequate separation of each activity, for both accounting and company purposes. Nevertheless, most of the restrictions imposed involve the transmission sector mainly due to its nature and to the need to guarantee adequate access to all agents. In Argentina, Chile and Colombia there are specific restrictions if generation or distribution companies want to become majority shareholders in transmission companies.

Regarding concentration in a specific sector, in Argentina, there are no specific limits that affect the vertical or horizontal integration of a company. In Chile, while there are regulations on free competition, there are no specific quantitative limits on vertical or horizontal integration. However, the General Law on Electrical Services provides that companies that operate on or have ownership in the Trunk Transmission Systems cannot engage in, either directly or indirectly, activities that are in any way involved in the business of power generation or distribution. In Peru, integration is subject to authorization. In Colombia, no company may have a direct or indirect market share of over 25% in electricity sale activities, although two criteria have been established for generating activity. One of these relates to participation limits depending on market concentration (HHI) and the size of the players according to their Firm Energy, and the other relates to pivotality conditions in the market depending on the availability of resources to meet system demand. In addition, Colombian companies created after the Public Service Law was enacted in 1994 can only engage in activities that complement generation/sales and distribution/sales. Finally, in Brazil, with the changes taking place in the power industry under Law 10,848/2004 and Decree 5,163/2004, the ANEEL gradually perfected regulations, eliminating concentration limits as no longer compatible with the prevailing regulatory environment. However, regulatory approval is required for consolidations or mergers to take place between players operating within the same business segment.

Market for unregulated customers

In all of the countries where the Group operates, distributing companies can supply their customers under regulated or freely-agreed conditions. The supply limitations imposed on the unregulated market are as follows:

Country	kW threshold
Argentina	> 30 kW
Brazil	> 3,000 kW or > 500 kW (1)
Chile	> 500 kW (2)
Colombia	> 100 kW or 55 MWh-month
Peru	> 200 kW (3)

- (1) The >500 kW limit applies if energy is purchased from renewable sources, for which the government provides incentives through a discount on tolls.
- (2) Clients purchasing 500 to 2,000 kW (see footnote N° 1) may choose between the regulated or unregulated markets. Clients using over 2,000 kW are required to be unregulated customers.
- (3) In April 2009, it was established that clients between 200 kW and 2,500 kW could choose between the regulated and unregulated markets. Those using over 2,500 kW are required to be unregulated customers.

4.2 Tariff Revisions:

General Aspects

In the five countries where the Group operates, selling prices charged to clients are based on the purchase price paid to generators plus a component associated with the value added in distribution. Regulators set this value periodically through reviews of distribution tariffs. As a result, distribution is essentially a regulated activity.

Chile

In Chile, the Distribution Value Added (VAD) is established every four years. For this, the local regulator, (the CNE) classifies companies by typical areas that group together companies with similar distribution costs. A distribution company's return on investment depends on the company's performance compared to model company standards defined by the regulator. On April 2, 2013, the Energy Ministry published Tariff Decree No. 1T in the Official Gazette. This was made retroactive to November 4, 2012 and will remain in effect until November 3, 2016. The next tariff-setting process will take place in 2016 and will cover the period November 2016 to November 2020.

Decree No. 14, which established the subtransmission tolls for this segment for 2011-2014 was published in the Official Gazette on April 9, 2013. The Average Node Price Decrees transfer these tolls to final customers, as they are part of distribution company's costs.

The Average Node Price Decrees, which include these new subtransmission tolls, were published between October and December 2014. During the first months of 2015, distribution companies should invoice final customers for these new tolls, as instructed by the Superintendency of Electricity and Fuels. Moreover, during 2014 there were delays in publishing the Short Term Price Node Decrees (PNCP), which is why the supply contracts were not indexed on the date these decrees came into operation, and provisions for these differences were recorded. Estimated amounts for these settlements were included under "Trade debtors" with respect to collection rights, and under "Trade and other accounts payable" for obligations to generators. Chilectra S.A. during the year 2014 has recognized provisions for sale and purchase from energy and capacity which generated a net profit for ThCh\$ 75,313,324 (net loss for ThCh\$ 3,356,862 in 2013), resulting from the non-application of the Average Node Price decrees (PNP).

Argentina

In Argentina, the first review of Edesur's tariffs scheduled for 2001 was cancelled by the authorities due to the country's economic and financial crisis, and tariffs were frozen starting with that year. Edesur's tariff restructuring started in 2007 with the enforcement of the "Acta Acuerdo," or Agreement Act. The last tariff adjustment made to date went into effect in 2008 (with a positive effect on the added value distribution, or VAD), when tariffs were adjusted for inflation (applying the cost monitoring mechanism, or MMC, provided for in the Agreement Act).

In November 2012, the ENRE passed Resolution 347 authorizing a fixed charge to be added on invoices which differs for various categories of customers. This charge will finance infrastructure works and corrective maintenance through a trust (FOCEDE). Additionally, in July 2012, the ENRE appointed an observer in Edesur; the appointment is still in effect, although this does not imply loss of control of the company.

Resolution SE No. 250/13 was published in May 2013 authorizing compensation for Edesur's debt corresponding to revenues originating from the application of the Program for the Rational Use of Electricity (PUREE) until February 2013, with a credit in its favor from recognition of the MMC for the six-month periods between May 2007 and February 2013. In addition, the Resolution instructed CAMMESA to issue in Edesur's favor what are termed as Sales Settlements with Unspecified Due Dates for values exceeding the compensation mentioned above, and authorized CAMMESA to receive these settlements as partial payment of Edesur's debt.

Subsequently, Resolution SE 250/13, complemented and extended to September 2013 under Note SE 6852/2013, had a positive effect on that distributing company's financial results. In 2014, Note S.E. 4012 and ENRE Note 112606 once again authorized MCC-PUREE compensation for the period from October 2013 to March 2014. Additionally, through Notes SE 486 and 1136 the MMC-PUREE compensation for the period April to August 2014 was authorized, and subsequently for the period September to December 2014. The financial effects of this compensation positively affected net income for the company. However, the Comprehensive Tariff Review (RTI) to adjust Edesur's revenues to its costs and obligations, as provided for in the Renegotiation Agreement Act, is still pending at this time.

Brazil

In Brazil, there are three types of tariff adjustments: i) Ordinary Tariff Reviews (RTO) which are conducted periodically in accordance with the provisions in the concession contracts (in Coelce every 4 years and in Ampla every 5 years); (ii) Annual Adjustments (IRT) since Brazil, unlike other countries, does not automatically index its tariffs to inflation; and (iii) Extraordinary Reviews (RTE) when important events have occurred that may affect the financial situation of the distributors.

Coelce's most recent periodic review was conducted in 2012 for the years 2011 to 2015, and it went into effect on April 22, 2012, calculated retroactively to April 2011. Its next review will be conducted by ANEEL in April of 2015 and will cover the years 2015 to 2019. In another review, ANEEL completed Ampla's tariff review for the period 2014-2019 in April 2014, retroactive to March 15, 2014. Coelce's most recent annual adjustment was set by ANEEL in April of 2014.

In September 2012, the government approved Temporary Measure 579, one purpose of which was to reduce certain electricity tariff taxes and special charges paid by the final user, which will be paid in the future with the state budget. In January 2013, the Temporary Measure became Law 12,783, giving rise to Extraordinary Tariff Reviews that resulted in tariffs dropping an average of 18% throughout the country. This reduction affected Ampla and Coelce from the end of January to April 2013 (when the respective annual readjustments went into effect).

In June of 2014, ANEEL submitted its proposal for the methodologies it will use in the fourth distribution tariff review cycle, which were available for comments from industry players until September 1, 2014. They will be available in a second round that started in December 2014 and continues through to February 2015. The main issues for discussion are: (i) a reduction in the rate of remunerations for actual WACC before tax, from 11.36% to 10.85%; and (ii) a modification of the basis for regulatory remunerations, using benchmarking for part of the asset base (additional costs and minor components). The new methodology would be applied to Coelce in its multi-year review in April 2015, if published in time.

Brazil continued to experience drought conditions throughout 2014. In November the system reached the maximum risk of energy rationing. The average reservoir levels were 1% lower than at the last rationing. However, the Government has stated that there is no risk to supply.

The Government has created the ACR account to cover the additional energy costs through bank loans to be paid within two years through the tariff. Distributors had used approximately 18 billion reals from the ACR account by December 31, 2014. However, this was not enough to cover the shortfall which will need to be recovered through the tariff using the CVA mechanisms.

In November 2014, ANEEL approved regulation that allows distribution companies recognize regulatory assets and liabilities. Previously, the energy purchase costs for a year are recognized a year later at the next tariff-setting process and accumulated in a regulatory account (regulatory asset) but they could not be recorded in the accounting, due to the absence of a specific regulation (see Note 9.a).

In September 2014, ANEEL approved the implementation of tariff system flags. From January 2015, the electricity bill will include colored information, which will indicate to the customer the generating cost situation for the following month: i) green: unchanged tariff, ii) yellow: increase of R\$1.5 per 100 kWh, and iii) red: increase of R\$3.0 per 100 kWh. The current generating cost is transferred to the customer only once a year (when the annual tariff adjustment is performed). However, this mechanism will generate a monthly variation and the customer can improve control over his electricity consumption. The additional revenue obtained by the distributors by applying tariff flags will be considered when the annual rate is adjusted.

Colombia

The Energy and Gas Regulatory Commission (*Comisión de Regulación de Energía y Gas* - CREG) is the entity that defines the method by which distribution networks are paid. Distribution charges are reviewed every five years and updated monthly according to the Producer Price Index (PPI). Currently, these charges include the new replacement value of all operational assets, the Administration, Operation and Maintenance (AOM) and non-electrical assets used in the distribution business. In Colombia, the current distribution charges for Codensa were published by the CREG in October 2009. Meanwhile, marketing charges were established in 1998.

The review of regulated distribution charges began in 2013 with the publication of the assumptions for the remuneration methodology proposed by the CREG in Resolution 043 dated 2013. These assumptions were complemented by the development of the Purposes and Guidelines for Compensation of the Distribution Activity for the period 2015-2019 in resolution CREG 079 dated 2014. This resolution stems from the policies defined by the Ministry of Mines and Energy that seek to ensure timely expansion and adequacy of assets, and to this end to incorporate replacement incentives and a comprehensive Investment Plan that will incorporate technology, improve service quality and control energy losses.

Additionally, the Regulatory Commission has issued resolutions CREG 083 dated 2014, and 112 dated 2014, where the method for calculating the regulated remuneration tariff (WACC) is defined for Electricity Transmission and Distribution, as well as for Natural Gas Transportation and Distribution.

According to the regulatory agenda, it is expected that the final decision will be published in the second quarter of 2015.

During the first half of 2015 the regulator is expected to issue the final method for calculating regulated selling charges, as this review has been taking place over the last few years. Codensa has contributed with comments on the draft methodology, focused mainly on proper recognition of the costs of managing and maintaining energy losses and a proper assessment of the portfolio risk faced by Codensa as a seller.

The Commission published resolution CREG 135 dated 2014 with regard to the pricing formula. This resolution establishes the assumptions on which studies were carried out to determine the unit cost formula for providing the service during the next tariff period.

Peru

As in Chile, a process takes place in Peru every four years to determine the VAD, also using a "model company" methodology for a typical area. In October 2013, the OSINERGMIN published Resolution 203/2013 setting Edelnor's distribution tariffs from November 2013 to October 2017.

5. BUSINESS COMBINATION - ACQUISITION OF GASATACAMA

On April 22, 2014, Endesa Chile acquired the 50% interest in Inversiones GasAtacama Holding Limitada (hereinafter GasAtacama) that was held by Southern Cross Latin America Private Equity Fund III L.P. (hereinafter Southern Cross) at that time.

Consequently, the Group now has 100% of control over GasAtacama, the company that controls the Atacama Plant, a 780 MW capacity combined cycle thermal power plant fired by natural gas or diesel oil located in the north of Chile; the 940 km Atacama Pipeline that runs between Coronel Cornejo in Argentina and Mejillones in Chile; and the 223 km Taltal Pipeline between Mejillones and Paposo.

With control of GasAtacama, the Group's total generation capacity in Chile's northern grid (the *Sistema Interconectado del Norte Grande*, or SING) reached 1,000 MW. This is expected enable it to satisfy greater industrial, residential and mining demand through a competitively priced energy supply with a low environmental impact.

The GasAtacama acquisition was recorded using the accounting criteria for business combinations carried out in phases, as detailed in Note 2.6.1.

Since the date of acquisition, Inversiones GasAtacama Holding Limitada has contributed ThCh\$113,074,006 in revenues and ThCh\$33,443,547 in income before tax to the Group's results. Had the acquisition taken place on January 1, 2014, it is estimated that these amounts would have been ThCh\$179,474,707 in revenues and ThCh\$41,772,291 in consolidated income before tax for the fiscal year ended December 31, 2014.

a) Consideration transferred

The following table summarizes the fair value of each type of consideration transferred in connection with the GasAtacama acquisition:

	ThCh\$
Total price paid	174,028,622
Transaction recorded separately from the assets acquisition and liabilities assumed (i)	(16,070,521)
Total paid in cash	157,958,101

(i) The total transaction payment was ThCh\$174,028,622 and included the assignment of rights to collect on an outstanding loan of ThCh\$16,070,521 owed by Pacific Energy Sub Co. (a subsidiary of Southern Cross) to Atacama Finance Co. (a subsidiary of GasAtacama).

b) Acquisition costs

Endesa Chile incurred costs of ThCh\$23,543 in financial consulting fees related to the acquisition of Inversiones GasAtacama Holding Limitada. These costs have been recognized under the line item "Other expenses" in the consolidated statements of comprehensive income.

c) Identifiable assets acquired and identifiable liabilities assumed

The following table summarizes the fair values recognized for assets acquired and liabilities assumed in connection with the acquisition:

	Fair Value
Identifiable assets acquired, net	ThCh\$
Cash and cash equivalents	120,303,339
Trade and other current receivables	34,465,552
Current accounts receivable from related companies	5,692,257
Inventories	15,009,265
Property, plant and equipment	199,660,391
Deferred tax assets	2,392,531
Other assets	23,906,126
Trade and other current payables	(30,818,836)
Current accounts payable to related companies	(34,445,277)
Deferred tax liabilities	(28,923,167)
Other liabilities	(10,874,817)
Total	296,367,364

No risk of default is expected for the gross amount of trade and other receivables.

Given the nature of GasAtacama's business and assets, the fair value of the assets acquired and the liabilities assumed was measured using the following valuation focuses:

- i. The market approach using the comparison method, based on the market prices quoted for identical or comparable items when available.
- ii. The cost approach or depreciated replacement cost, which reflects adjustments for physical wear as well as for functional and economic obsolescence.
- iii. The income approach, which uses valuation techniques that convert future amounts (such as cash flows or revenues and expenses) into a single present amount (that is, discounted). The fair value measurement is determined based on the value indicated for present market expectations for these future amounts.

Reconciliation of values

Finally, the fair values are reached from an assessment and reconciliation of the results obtained from the methods selected, based on the nature of each asset acquired and liability assumed.

Should new information be obtained during a period of one year after the acquisition date of events and circumstances that existed at the time of acquisition and result in the recognition of additional assets or liabilities, the accounting of the acquisition will be reviewed and the pertinent corrections made, following the criteria described in Note 2.6.

d) Goodwill

	ThCh\$
Cash paid	157,958,101
Fair value of pre-existing interest	157,147,000
Fair value of identifiable net assets acquired	(296,367,364)
Goodwill (See Note 16)	18,737,737

The goodwill is attributable primarily to the value of the synergies expected to be obtained by integrating GasAtacama into the Group. These synergies include reduced administrative, research and structure costs, which could be absorbed by Endesa Chile.

e) Remeasurement of pre-existing stake and currency translation differences

The remeasurement of the fair value of Endesa Chile's pre-existing 50% stake in GasAtacama resulted in a gain of ThCh\$21,546,320. This amount is the positive difference arising from comparing the fair value of the pre-existing stake of ThCh\$157,147,000, and the investment value accounted for using the equity method at the acquisition date of ThCh\$135,600,680.

Moreover, the exchange differences on translation of the pre existing stake accumulated in the equity of Endesa Chile/Enersis at the acquisition date, were reclassified to income for the period, generating a profit of ThCh\$21,006,456.

Both amounts have been recorded under "Other gains (losses)" in the consolidated statement of comprehensive income (see Note 32).

6. CAPITAL INCREASE

The Enersis capital increase approved by the Extraordinary Shareholders' Meeting on December 20, 2012 was completed in the first quarter of 2013; all of the allocated shares were subscribed (see Note 26.1.1).

This capital increase amounted to ThCh\$2,845,858,393. Of this, 60.62% of the shares were subscribed by Endesa S.A. and were paid for with its investments in Latin America valued at ThCh\$1,724,400,000. The remaining shares were subscribed and paid with non-controlling interests of Enersis via cash payments of ThCh\$1,121,458,393, which included a share issuance premium of ThCh\$1,460,503.

Endesa's contribution was made by transferring all of its shares in Cono Sur Participaciones, S.L., so that all of that corporation's assets and liabilities, representing holdings in Chile, Argentina, Brazil, Colombia and Peru, were incorporated into Enersis.

The following table summarizes the interests contributed by Endesa S.A.:

i) Contributions in companies that Enersis controlled before the transaction:

Company	Percentage contributed
Empresa Distribuidora S.A.	6.23%
Enel Brasil S.A.	28.48%
Ampla Energía y Servicos S.A.	7.70%
Ampla Investimentos y Servicos S.A.	7.70%
Compañía Eléctrica San Isidro S.A.	4.38%
Emgesa S.A. E.S.P.	21.60%
Codensa S.A. E.S.P.	26.66%
Inversiones Distrilima S.A.	34.83%

These contributions were recorded using the accounting criteria established in Note 2.6.6, and resulted in a charge of ThCh\$947,982,284 to Other miscellaneous reserves in Enersis' Net equity. This amount is the difference between the economic and accounting values of the stakes transferred by Endesa S.A. on the date of the transaction.

Components of other comprehensive income have also been redistributed as needed, with an additional ThCh\$41,885,724 charged to Other miscellaneous reserves and credited to Reserve for exchange differences in translation. This redistribution, based on the prorated stakes contributed by Endesa S.A., has assigned to the Enersis shareholders their share of Reserve for differences in translation that, prior to the transaction, was assigned to non-controlling interests.

ii) Contributions in companies that Enersis did not control or in which it did not hold a stake prior to the transaction:

Company	Percentage contributed (directly and indirectly)
Eléctrica Cabo Blanco S.A.C.	100.00%
Endesa Cemsa S.A.	55.00%
Generalima S.A.C.	100.00%
Empresa Eléctrica de Piura S.A.	96.50%
Inversora Dock Sud S.A.	57.14%
Central Dock Sud S.A.	39.99%
Yacylec S.A.	22.22%

These contributions were recorded using the accounting criteria established in Note 2.6.6 and resulted in a ThCh\$92,011,899 credit to Other miscellaneous reserves in Enersis' Net equity. The amount is the difference between the economic and accounting values of the stakes transferred by Endesa S.A. on the date of the transaction.

The following table summarizes the effects of the capital increase on the Enersis Consolidated Statement of Financial Position on the date of the transaction:

	Cash Contribution	Contribution in companies previously controlled	Contribution in companies not previously controlled or in which a stake was not held	Total as of March 31, 2013
ASSETS	ThCh\$	ThCh\$	ThCh\$	ThCh\$
Current assets	1,121,458,393	-	189,506,588	1,310,964,981

TOTAL LIABILITIES	-	-	234,879,675	234,879,675
EQUITY				
Capital increase	1,119,997,890	1,692,613,860	31,786,140	2,844,397,890
Share premium for capital increase (other Reserves)	1,460,503	_	-	1,460,503
Other miscellaneous reserves	-	(989,868,008)	92,011,899	(897,856,109)
Foreign currency translation differences	-	41,885,724	-	41,885,724
Equity attributable to shareholders of Enersis	1,121,458,393	744,631,576	123,798,039	1,989,888,008
Non-controlling interests	-	(744,631,576)	(8,065,460)	(752,697,036)
TOTAL EQUITY	1,121,458,393	-	115,732,579	1,237,190,972
TOTAL LIABILITIES AND EQUITY	1,121,458,393	-	350,612,254	1,472,070,647

Share issuance and placement costs as of December 31, 2013 amounted to ThCh\$23,592,387 and, as indicated in Note 3.t), were recorded in "Other miscellaneous reserves" (see Note 26.5.c.2).

During the 2013 fiscal year the amount of net income attributable to shareholders of Enersis from the stake acquired was ThCh\$126,280,714.

7. CASH AND CASH EQUIVALENTS

a) The detail of cash and cash equivalents as of December 31, 2014 and 2013 is as follows:

Cash and Cash Equivalents	Bala	Balance at	
	12-31-2014	12-31-2013	
	ThCh\$	ThCh\$	
Cash balances	1,264,361	634,742	
Bank balances	283,305,826	237,282,963	
Time deposits	922,909,741	1,057,505,464	
Other fixed-income instruments	497,265,563	310,964,400	
Total	1,704,745,491	1,606,387,569	

Time deposits have a maturity of three months or less from their date of acquisition and accrue the market interest for this type of short-term investment. Other fixed-income investments are mainly comprised of resale agreements maturing in 90 days or less from the date of investment.

b) The detail of cash and cash equivalents by currency is as follows:

Cumanav	12-31-2014	12-31-2013
Currency	ThCh\$	ThCh\$
Chilean peso	687,912,363	673,499,514
Argentine peso	29,065,256	22,648,396
Colombian peso	357,337,537	344,234,511
Brazilian real	197,723,752	249,642,972
Peruvian nuevo sol	105,282,911	68,050,020
U.S. dollar	327,423,672	248,312,156
Total	1,704,745,491	1,606,387,569

c) The following table shows the amounts paid to obtain control of subsidiaries as of December 31, 2014 and 2013:

Acquisition of Subsidiaries	12-31-2014 ThCh\$	12-31-2013 ThCh\$
Acquisitions paid in cash and cash equivalents	(157,958,101)	-
Cash and cash equivalents in entities acquired	120,303,339	-
Total, net (*)	(37,654,762)	-

(*) See Note 5.

d) The following table shows a reconciliation of cash and cash equivalents presented in the statement of financial position with cash and cash equivalents in the cash flow statement at December 31, 2014 and 2013:

	Balance at	
	12-31-2014 12-31-2013	
	ThCh\$	ThCh\$
Cash and cash equivalents (statement of financial position)	1,704,745,491	1,606,387,569
Cash and cash equivalents attributable to assets held for sale (*)	29,702	-
Cash and cash equivalents (statement of cash flow)	1,704,775,193	1,606,387,569

(*) See Note 13.

e) The following amounts have been received from the sale of shares in subsidiaries:

Loss of control at Subsidiaries	12-31-2014 ThCh\$	12-31-2013 ThCh\$
Amounts received for the sale of Subsidiaries(*)	57,173,142	-
Amounts in cash and cash equivalents	(16,311,571)	-
Total net	40,861,571	-

(*) See Note 2.4.1. and Note 32.

8. OTHER FINANCIAL ASSETS

The detail of other financial assets as of December 31, 2014 and 2013 is as follows:

		Bala	nce at		
Other Financial Assets	Cu	rrent	Non-current		
Other Financial Assets	12-31-2014	12-31-2013	12-31-2014	12-31-2013	
	ThCh\$	ThCh\$	ThCh\$	ThCh\$	
Available-for-sale financial investments - unquoted equity securities or					
with limited liquidity	-	-	3,944,058	4,129,036	
Available-for-sale financial investments - quoted equity securities	-	-	362,169	29,195	
Available-for-sale financial investments IFRIC 12 (*)(**)	-	-	492,923,605	448,107,319	
Financial assets held to maturity (*)	38,301,763	588,490,652	26,340,396	34,867,362	
Hedging derivatives (*)	1,414,588	25,142,725	7,229,290	4,403,506	
Financial assets at fair value with change in profit or loss (*)	52,677,337	163,288,698	-	-	
Non-hedging derivatives (*)	7,061,715	4,107,362	22,002	-	
• •					
Total	99,455,403	781,029,437	530,821,520	491,536,418	

(*) See Note 22.1.a

The amounts included in "financial assets held to maturity" and "financial assets at fair value with change in profit or loss" correspond mainly to time deposits and other highly liquid investments that are readily convertible to cash and subject to a low risk of changes in value, but that do not fulfill the definition of cash equivalent as defined in Note 3.g.2 (e.g. with maturity over 90 days from time of investment).

(**) On September 11, 2012, the Brazilian government issued Temporary Law 579, which became permanent on January 13, 2013 and directly affects companies holding electric power generation, transmission, and distribution concessions, including Ampla and Coelce. Among its provisions, this legislation establishes that the government, as concession grantor, will use the Valor Nuevo de Reemplazo (VNR, New Replacement Value) to make the corresponding indemnity payments to the concessionaires for those assets that have not been amortized at the end of the concession period. Every month the distributors adjust the book value of the financial asset, by calculating the present value of estimated cash flows, using the effective interest rate on the corresponding payment at the end of the concession.

As a result of this new development, the subsidiaries have changed how they value and classify the amounts they expect to recover in compensation when the concession period ends. The previous approach was based on the historic cost of the investments, and the rights to compensation were recorded as an account receivable. Now, however, they are valued on the basis of the VNR, and the compensation rights are classified as financial assets available for sale (see Note 3.g).

9. TRADE AND OTHER RECEIVABLES

a) The detail of trade and other receivables as of December 31, 2014 and 2013 is as follows:

		Balance at						
Trade and Other Receivables, Gross	12-31-	2014	12-31-	2013				
Trade and Other Receivables, Gross	Current ThCh\$	Non-current ThCh\$	Current ThCh\$	Non-current ThCh\$				
Trade and other receivables, gross	1,844,027,889	291,641,675	1,286,605,376	223,045,673				
Trade receivables, gross	1,275,999,654	202,932,480	1,002,252,700	181,381,483				
Other receivables, gross (1)	568,028,235	88,709,195	284,352,676	41,664,190				

		Balance at						
Trade and Other Receivables, Net	12-31-	2014	12-31-2013					
Trade and Other Receivables, Net	Current	Non-current	Current	Non-current				
	ThCh\$	ThCh\$	ThCh\$	ThCh\$				
Trade and other receivables, net	1,681,686,903	291,641,675	1,129,737,108	223,045,673				
Trade and other receivables, net	1,120,897,826	202,932,480	855,106,689	181,381,483				
Other receivables, net (1)	560,789,077	88,709,195	274,630,419	41,664,190				

(1) Includes mainly accounts receivable from personnel for ThCh\$31,042,105 (ThCh\$34,740,084 as of December 31, 2013); Resolution 250/13 (applicable in Argentina) on the Cost Monitoring Mechanism (MMC) adjustment for ThCh\$253,484,218 (ThCh\$138,901,549 as of December 31, 2013); Recoverable taxes (VAT) of ThCh\$157,439,993 (ThCh\$84,473,227 at December 31, 2013) (See Note 23); and Accounts receivable at our Brazilian subsidiaries Ampla and Coelce, following the signing of the addendum to the concession contracts where the outstanding assets are recoverable and/or can be offset in subsequent tariff periods, of ThCh\$150,387,462 (ThCh\$0 at December 31, 2013).

There are no significant trade and other receivables balances held by the Group that are not available for its use.

The Group does not have clients to which it has sales representing 10% or more of its operating income for the fiscal years ended December 31, 2014 and 2013.

Refer to Note 10.1 for detailed information on amounts, terms and conditions associated with accounts receivable from related companies.

b) As of December 31, 2014 and 2013, the balance of unimpaired overdue trade receivables is as follows

	Bal	ance at
Trade Receivables Past Due But Not Impaired	12-31-2014	12-31-2013
	ThCh\$	ThCh\$
Less than three months	152,844,247	103,911,764
Between three and six months	14,297,179	30,627,469
Between six and twelve months	63,606,398	32,832,828
More than twelve months	51,972,887	56,032,427
Total	282,720,711	223,404,488

c) The reconciliation of changes in the allowance for impairment of trade receivables is as follows:

Trade Receivables Past Due and Impaired	Current and Non-current ThCh\$
Balance at January 1, 2013	157,841,770
Increases (decreases) for the year (*)	33,554,637
Amounts written off	(18,827,998)
Foreign currency translation differences	(15,700,141)
Balance at December 31, 2013	156,868,268
Increases (decreases) for the year (*)	22,848,140
Amounts written off	(19,013,041)
Foreign currency translation differences	1,637,619
Balance at December 31, 2014	162,340,986

^(*) See Note 30 for impairment of financial assets.

Write-offs for bad debt

Past-due debt is written off once all collection measures and legal proceedings have been exhausted and the debtors' insolvency has been demonstrated. In our power generation business, this process normally takes at least one year of procedures for the few cases that arise in each country. In our distribution business, considering the differences in each country, the process takes at least six months in Argentina and Brazil, 12 months in Colombia and Peru, and 24 months in Chile. Overall, the risk of bad debt, and therefore the risk of writing off our trade receivables, is limited (see Notes 3.e and 21.5).

d) Additional information:

- Additional statistical information required under Official Bulletin 715 of the *Superintendencia de Valores y Seguros de Chile* (Chilean Superintendency of Securities and Insurance), of February 3, 2012, XBRL Taxonomy: see Appendix 6.
- Complementary information on Trade Receivables, see Appendix 6.1.

10. BALANCES AND TRANSACTIONS WITH RELATED PARTIES

Related party transactions are performed at current market conditions.

Transactions between the Company and its subsidiaries and joint ventures have been eliminated on consolidation and are not itemized in this note.

As of the date of these financial statements, no guarantees have been given or received nor has any allowance for bad or doubtful accounts been recorded with respect to receivable balances for related party transactions.

The controlling shareholder of Enersis is the Italian corporation Enel S.p.A.

10.1 Balances and transactions with related companies

The balances of accounts receivable and payable between the Company and its non-consolidated related companies are as follows:

a) Receivables from related companies

(1) See Notes 2.4.1, 5, 6 and 14.

Transfers of short-term funds between related companies are treated as current accounts changes, with variable interest rates based on market conditions used for the monthly balance. The resulting amounts receivable or payable are usually at 30 days term, with automatic rollover for the same periods and amortization in line with cash flows.

10.2 Board of directors and key management personnel

Enersis is managed by Board of Directors which consists of seven members. Each director serves for a three-year term after which they can be reelected.

The Board of Directors as of December 31, 2014 was elected at the Ordinary Shareholders Meeting held on April 16, 2013. The current Chairman of the Board was designated at a Board meeting held on November 4, 2014, and new directors were appointed to replace those who resigned during the period. The Vice Chairman and Secretary were designated at the Board meeting held on April 16, 2013.

a) Accounts receivable and payable and other transactions

Accounts receivable and payable

There are no outstanding amounts receivable or payable between the Company and the members of the Board of Directors and key management personnel.

Other transactions

No transactions other than the payment of remuneration have taken place between the Company and the members of the Board of Directors and key management personnel.

b) Compensation for directors

In accordance with Article 33 of Law No. 18,046 governing stock corporations, the compensation of Directors is established each year at the Ordinary Shareholders Meeting of Enersis S.A.

The remuneration consists of paying a variable annual compensation equal to one one-thousandth of the profit for the year (attributable to Shareholders of Enersis). Also, each member of the Board will be paid a monthly compensation, one part a fixed monthly fee and another part dependent on meetings attended. The breakdown of this compensation is as follows:

- 101 UF as a fixed monthly fee, and
- 66 UF as per diem for each Board meeting attended.

The amounts paid for the monthly fee will be treated as payment in advance of the variable annual compensation described above. As stated in the by-laws, the remuneration for the Chairman of the Board will be twice that of a Director, and the compensation of the Vice Chairman will be 50% higher than that of a Director.

Any advance payments received will be deducted from the annual variable compensation, with no reimbursement if the annual variable compensation is lower than the total amount paid in advances. The variable compensation will be paid, when appropriate, after the Ordinary Shareholders' Meeting approves the Annual Report, Balance Sheet and Financial Statements, and the Independent Auditors' Reports and Account Inspectors' Reports for the year ending December 31, 2014.

If any Director of Enersis S.A. is a member of more than one Board in any Chilean or foreign subsidiaries and/or associates, or holds the position of director or advisor in other Chilean or foreign companies or legal entities in which Enersis S.A. has a direct or indirect ownership interest, that Director can be compensated for his/her participation in only one of those Boards or Management Committees.

The Executive Officers of Enersis S.A. and/or any of its Chilean or foreign subsidiaries or associates will not receive any compensation or per diem if they hold the position of director in any of the Chilean or foreign subsidiaries or associates of Enersis S.A. Nevertheless, the executives may receive such compensation or per diem, provided there is prior express authorization, as a payment in advance of the variable portion of their remuneration received from the respective companies through which they are employed.

Directors' Committee:

Each member of the Directors' Committee will receive a variable remuneration equal to 0.11765 thousandth of the profit for the year (attributable to shareholders of Enersis). Also each member will be paid a monthly compensation, one part in a fixed monthly fee and another part dependent on meetings attended.

This remuneration is broken down as follows:

- 38.00 UF as a fixed monthly fee, and
- 18.00 UF as per diem for each Board meeting attended.

The amounts paid for the monthly fee will be treated as payment in advance of the variable annual compensation described above.

Any advance payments received will be deducted from the annual variable compensation, with no reimbursement if the annual variable compensation is lower than the total amount paid in advances. The variable compensation will be paid, when appropriate, after the Ordinary Shareholders' Meeting approves the Annual Report, Balance Sheet and Financial Statements, and the Independent Auditors' Reports and Account Inspectors' Reports for the year ending December 31, 2014.

The following tables show details of the compensation paid to the members of the Board of Directors of Enersis for the fiscal years 2014, 2013 and 2012:

10,664,744-5	Paola Visintini Vaccarezza (5)	Human Resources and Organization Officer					
7,706,387-0	Eduardo López Miller	Procurement Officer					
6,973,465-0	Domingo Valdés Prieto	General Counsel and Secretary to the Board					

- (1) On April 1, 2013, Mr. Marco Fadda became Planning and Control Officer, replacing Mr. Ramiro Alfonsin Balza, who was named Deputy Chief Executive Officer of our subsidiary Empresa Nacional de Electricidad S.A. on the same date.
- (2) On November 12, 2014 Mr. Luigi Ferraris became CEO replacing Mr. Ignacio Antoñanzas, who submitted his voluntarily resignation from Enersis, and served until November 12, 2014 (See note 41).
- (3) On November 12, 2014 Mr. Daniel Fernandez Koprich became Deputy CEO replacing Mr. Massimo Tambosco.
- (4) On December 1, 2014 Mr. José Miranda Montecinos became Communications Manager replacing Mr. Daniel Horacio Martini, who submitted his voluntarily resignation from Enersis, and served until December 1, 2014.
- (5) On December 12, 2014 Ms. Paola Visintini Vaccarezza became of Human Resources and Organizational Manager replacing Mr. Carlos Niño, who submitted his voluntarily resignation from Enersis, and served until November 25, 2014.
- (6) On December 15, 2014 Mr. Francisco Galán Allue became Administration, Finance and Control Manager replacing Mr. Eduardo Escaffi.
- (7) On December 15, 2014 Mr. Francesco Giogianni became Institutional Relations Manager.

Incentive plans for key management personnel

Enersis has implemented an annual bonus plan for its executives based on meeting company-wide objectives and on the level of their individual contribution in achieving the overall goals of the Group. The plan provides for a range of bonus amounts according to seniority level. The bonuses paid to the executives consist of a certain number of monthly gross remunerations.

Compensation received by key management personnel is the following:

	Balance at							
	12-31-2014 ThCh\$	12-31-2013 ThCh\$	12-31-2012 ThCh\$					
Cash compensation	3,028,193	2,522,068	2,615,660					
Short-term benefits for employees	830,052	514,139	996,474					
Other long-term benefits	562,074	612,627	724,297					
Total	4,420,319	3,648,834	4,336,431					

b) Guarantees established by the Company in favor of key management personnel

No guarantees have been given to key management personnel.

10.4 Compensation plans linked to share price

There are no payment plans granted to the Directors or key management personnel based on the price of Enersis stock.

11. INVENTORIES

Electrical materials	17,060,502	18,385,964

There are no inventories pledged as security for liabilities.

For the period ended December 31, 2014, the figure for raw materials and consumables recognized as fuel expenses was ThCh\$\$511,014,654 (ThCh\$386,116,195 and ThCh\$763,791,553 as of December 31, 2013 and 2012 respectively). See Note 28.

As of December 31, 2014 and 2013, no inventories have been written down.

12. TAX RECEIVABLES AND PAYABLES

The detail of current tax receivables as of December 31, 2014 and 2013 is as follows:

	Balance at					
Tax Receivables	12-31-2014 ThCh\$	12-31-2013 ThCh\$				
Monthly provisional tax payments	59,831,897	64,763,908				
Tax credit for absorbed profits	20,104,186	31,697,734				
Tax credit for training expenses	301,800	302,998				
Tax credits from dividends received abroad	28,047,776	28,896,906				
Other	2,286,863	-				
Total	110,572,522	125,661,546				

The detail of current tax payables as of December 31, 2014 and 2013 is as follows:

	Balance at				
Tax Payables	12-31-2014 ThCh\$	12-31-2013 ThCh\$			
Income tax	115,472,313	159,737,063			
Total	115,472,313	159,737,063			

13. NON-CURRENT ASSETS OR GROUPS OF ASSETS FOR DISPOSAL CLASSIFIED AS HELD FOR SALE

During the month of December 2014, Empresa Nacional de Electricidad SA and its subsidiary Compañía Eléctrica de Tarapacá SA signed a contract to sell to Temsa Private Investment Fund all their shares in Sociedad Concesionaria Túnel El Melón S.A. This agreement established a number of conditions, which had not been fulfilled at the end of 2014, preventing the closure of the sale. Finally, the sale was perfectedduring January 2015 (See Note 41).

Túnel El Melón S.A is a private corporation whose purpose is the construction, maintenance and operation of the public work called the El Melón Tunnel and the provision of ancillary services authorized by the Ministry of Public Works (MOP).

The El Melón Tunnel is an alternative to the road that climbs the El Melon pass, which is located between 126 and 132 kilometers north of Santiago on Route 5. This is the main highway linking the country from Arica to Puerto Montt.

As described in Note 3-k), non-current assets and groups of assets held for sale have been recorded at the lower of book value and fair value less selling costs.

The main items of assets, liabilities and cash flow held for sale at December 31, 2014 are as follows:

CURRENT ASSETS	Balance 12/31/2014
	20.702
Cash and cash equivalents	29,702
Other current non-financial assets	81,275
Trade and other current receivables	758,645
Current tax assets	1,400
TOTAL CURRENT ASSETS	871,022
NON-CURRENT ASSETS	
Intangible assets other than goodwill	4,404,615
Property, plant and equipment	81,432
Deferred tax assets	2,621,894
TOTAL NON-CURRENT ASSETS	7,107,941
TOTAL ASSETS	7,978,963
CURRENT LIABILITIES	
Other current financial liabilities	3,072,179
Trade and other current payables	495,235
Other current non-financial liabilities	131,030
TOTAL CURRENT LIABILITIES	3,698,444
NON-CURRENT LIABILITIES Other non-current financial liabilities	1,660,254
Non-current provisions for employee benefits	102.423
Other non-current non-financial liabilities	27.026
TOTAL NON-CURRENT LIABILITIES	1,789,703
TOTAL LIABILITIES	5 400 147
TOTAL LIABILITIES	5,488,147
	Balance 12/31/2014
Summary of net cash flow	
Net cash flows from (used in) operating activities	9,045,775
Net cash flows from (used in) investment activities	(5,604,740)
Net cash flows from (used in) financing activities	(3,450,774)
Net increase (decrease) in cash and cash equivalents before effect of exchange rate changes	(9,739)
Effect of exchange rate changes on cash and cash equivalents	-
Net increase (decrease) in cash and cash equivalents	(9,739)
Cash and cash equivalents at beginning of period	39,440
Cash and cash equivalents at end of period	29,702

14. INVESTMENTS ACCOUNTED FOR USING THE EQUITY METHOD

14.1. Investments accounted for using the equity method

The following tables present the changes in shareholders' equity of the Group's equity method investments during the fiscal years 2014 and 2013:

- Ξ 2.4.1 and 5). In April 2014, the company Inversiones GasAtacama Holding Ltda. began to be included in the consolidation using the global integration method (see Notes
- (2) On June 30, 2013, Yacylec S.A. became an associated company and Endesa Cemsa S.A. ceased to be treated as an associate. As of that date, the latter began to be consolidated using the global integration method (see Note 2.4.1, Note 26.1.1, and Appendix 3).
- \mathfrak{S} The loss recognized during 2014 includes a provision for impairment of ThCh\$69,066,857 as a result of uncertainty about the recoverability of this investment (see Note 36.5 and 41).

b. Additional financial information on investments in associated companies and joint ventures

14.2. Investments with significant influence

The following tables show financial information as of December 31, 2014 and 2013 from the Financial Statements of the investments in associates where the Group has significant influence:

- (1) Empresa Eléctrica Pangue S.A. was merged with Compañía Eléctrica San Isidro S.A. on May 1, 2012; it is the latter company that legally continues to exist.
- (2) Compañía Eléctrica San Isidro S.A. was merged with Endesa Eco S.A. on September 1, 2013; it is the latter company that legally continues to exist.
- (3) Endesa Eco S.A. was merged with Compañía Eléctrica Tarapacá S.A. on November 1, 2013; it is the latter company that legally continues to exist.
- (4) Investuz S.A. and Ampla Investimentos E Serviços S.A. were merged with Enel Brasil S.A. on November 21, 2013; it is the latter company that legally continues to exist.
- (5) See Notes 2.4.1 and 5.

According to the Group management's estimates and projections, the expected future cash flows projections attributable to the Cash-Generating Units or groups of Cash-Generating Units, to which the acquired goodwill has been allocated, allow recovery of its carrying value as of December 31, 2014 (See Note 3.e).

The origin of the goodwill is detailed below:

1.- Ampla Energia e Serviços S.A.

On November 20, 1996, Enersis S.A. and Chilectra S.A., together with Endesa S.A. and Electricidad de Portugal, acquired a controlling stake in the company Cerj S.A. (now Ampla de Energía) of Rio de Janeiro in Brazil. Enersis S.A. and Chilectra S.A. together bought 42% of the total shares in an international public bidding process held by the Brazilian government.

Enersis S.A. and Chilectra S.A. also bought an additional 18.5% on December 31, 2000, so that they then held a total 60.5% stake, directly and indirectly.

2.- Compañía Energética Do Ceará S.A. (Coelce)

Between 1998 and 1999, Enersis S.A. and Chilectra S.A., together with Endesa S.A., acquired the company Compañía de Distribución Eléctrica del Estado de Ceará (Coelce) in northeast Brazil in an international public bidding process held by the Brazilian government.

3.- Empresa Eléctrica de Colina Ltda.

On September 30, 1996, Chilectra S.A. acquired 100% of the company Empresa Eléctrica de Colina Ltda. from the investment company Saint Thomas S.A., which is neither directly nor indirectly related to Chilectra S.A.

4.- Compañía Distribuidora y Comercializadora de Energía S.A. (Codensa S.A.)

On October 23, 1997, Enersis S.A. and Chilectra S.A., together with Endesa S.A., acquired 48.5% of Colombiana Codensa S.A., a company that distributes electricity in Santa Fé de Bogotá in Colombia. The purchase took place through an international public bidding process held by the Colombian government.

5.- Empresa Eléctrica Pangue S.A.

On July 12, 2002, Endesa Chile acquired 2.51% of the shares of Empresa Eléctrica Pangue S.A. through a put option held by the minority shareholder Internacional Finance Corporation (IFC).

On May 2, 2012, Empresa Eléctrica Pangue S.A. merged with Compañía Eléctrica San Isidro S.A.; it is the latter company that legally continues to exist.

6.- Hidroeléctrica el Chocón S.A.

On August 31, 1993, Endesa Chile acquired 59% of Hidroeléctrica El Chocón in an international public bidding process held by the Argentine government.

7.- Compañía Eléctrica San Isidro S.A.

On August 11, 2005, Endesa Chile bought the shares of the company Inversiones Lo Venecia Ltda., whose only asset was a 25% interest in the company San Isidro S.A. (minority shareholder purchase).

8.- Empresa de Distribución Eléctrica de Lima Norte S.A.A.

On October 15, 2009 in a transaction on the Lima Stock Exchange, Enersis S.A. purchased an additional 24% interest in Empresa de Distribución Eléctrica de Lima Norte S.A. (Edelnor).

9.- Cachoeira Dourada S.A.

On September 5, 1997, our subsidiary Endesa Chile acquired 79% of the company Cachoeira Dourada S.A. in the state of Goias in a public bidding process held by the Brazilian government.

10.- Edegel S.A.A.

On October 9, 2009, in a transaction on the Lima Stock Exchange in Peru, our subsidiary Endesa Chile acquired an additional 29.3974% interest in Edegel S.A.

11.- Emgesa S.A. E.S.P.

On October 23, 1997, our subsidiary Endesa Chile, together with Endesa S.A., bought 48.5% of Emgesa S.A.E.S.P. in Colombia. The purchase was made in an international public bidding process held by the Colombian government.

12.- Chilectra S.A.

In November 2000, Enersis S.A. purchased an additional 25.4% interest in the subsidiary Chilectra S.A. through a purchasing power of attorney in a public bidding process, reaching a 99.99% stake in the company.

13.- Empresa Nacional de Electricidad S.A.

On May 11, 1999, Enersis S.A. acquired an additional 35% in Endesa Chile in a public bidding process on the Santiago Stock Exchange and by buying shares in the U.S. (30% and 5%, respectively), reaching a 60% interest in the generation company.

14.- Inversiones GasAtacama Holding Limitada.

On April 22, 2014, Endesa Chile acquired the 50% stake in Inversiones GasAtacama Holding Limitada that was owned at that time by Southern Cross Latin America Private Equity Fund III L.P (see Notes 2.4.1 and 5).

17. PROPERTY, PLANT AND EQUIPMENT

The following table shows property, plant and equipment as of December 31, 2014 and 2013:

Additional information on property, plant and equipment, net

a) Main investments

Major additions to property, plant and equipment are investments in operating plants and new projects amounting to ThCh\$1,053,081,596 at December 31, 2014 (ThCh\$703,077,032 at December 31, 2013). In the generation business main investments include the progress in the construction of the El Quimbo hydraulic power plant in Colombia (400 MW), involving additions of ThCh\$175,419,903 at December 31, 2014 (ThCh\$150,262,546 at December 31, 2013). In the distribution business major investments are network extensions and investments to optimize their operation, in order to improve the efficiency and quality of service, amounting to ThCh\$393,818,587 at December 31, 2014 (ThCh\$274,964,283 at December 31, 2013).

b) Finance leases

As of December 31, 2014 and 2013, property, plant and equipment includes ThCh\$116,571,108 and ThCh\$115,416,339, respectively, in leased assets classified as finance leases.

The present value of future lease payments derived from these finance leases is as follows:

		12-31-2014		12-31-2013			
	Gross ThCh\$	Interest ThCh\$	Present Value ThCh\$	Gross ThCh\$	Interest ThCh\$	Present Value ThCh\$	
Less than one year	19,830,764	1,707,340	18,123,424	15,915,072	1,868,169	14,046,903	
From one to five years	78,271,598	11,421,552	66,850,046	58,429,290	5,874,399	52,554,891	
More than five years	17,270,183	459,055	16,811,128	38,025,761	3,295,944	34,729,817	
Total	115,372,545	13,587,947	101,784,598	112,370,123	11,038,512	101,331,611	

Leased assets primarily relate to:

- 1. Endesa Chile S.A.: a lease agreement for Electric Transmission Lines and Installations (Ralco-Charrúa 2X220 KV) entered into between Endesa Chile and Abengoa Chile S.A. The lease agreement has a 20-year maturity and bears interest at an annual rate of 6.5%.
- 2. Edegel S.A.: lease agreements to finance the project of converting the Ventanilla thermoelectric plant to a combined cycle plant. The agreements were signed between Edegel S.A.A. and the financial institutions BBVA Banco Continental, Banco de Crédito del Perú, Citibank del Perú and Banco Internacional del Perú Interbank. These agreements have an average term of 8 years and bear interest at an annual rate of Libor + 1.75% as of December 31, 2014.

The company also has an agreement with Scotiabank, which financed the construction of a new open cycle plant at the Santa Rosa Plant. This agreement has a term of 9 years and bears interest an annual rate of Libor + 1.75%.

c) Operating leases

The consolidated statements of income at December 31, 2014, 2013 and 2012 include ThCh\$21,087,207, ThCh\$18,878,285 and ThCh\$18,483,171, respectively, corresponding to accrual during these periods of operating lease contracts for material assets in operation.

As of December 31, 2014 and 2013, the total future lease payments under those contracts are as follows:

	12-31-2014	12-31-2013
	ThCh\$	ThCh\$
Less than one year	13,540,619	10,447,299
From one to five years	34,389,527	41,971,517
More than five years	46,504,376	65,678,252
Total	94,434,522	118,097,068

d) Other information

- i) As of December 31, 2014 and 2013, the Group had contractual commitments for the acquisition of property, plant and equipment amounting to ThCh\$468,173,548 and ThCh\$350,969,175, respectively.
- ii) As of December 31, 2014 and 2013, the Group had property, plant and equipment pledged as security for liabilities in the amount of ThCh\$21,952,283 and ThCh\$176,514,115, respectively (see Note 36).
- iii) The Company and its foreign subsidiaries have insurance policies for all risks, earthquake and machinery breakdown and damages for business interruption with a €1,000 million limit in the case of generating companies and a €50 million limit for distribution companies, including business interruption coverage. Additionally, the Company has Civil Liability insurance to meet claims from third parties with a €500 million limit. The premiums associated with these policies are presented proportionally for each company under the line item "Expenses paid in advance".
- iv) The situation of certain assets of our subsidiary Endesa Chile has changed, primarily works and infrastructure for facilities built to support power generation in the SIC grid in 1998, due primarily to the installation in the SIC of new thermoelectric plants, the arrival of LNG, and new projects that will be starting up soon. This has resulted in a new supply configuration for the coming years, in which it is expected that these facilities will not need to be used. Therefore, in the 2009 fiscal year, the company recorded an impairment provision of ThCh\$43,999,600 for these assets, which is still in effect.
- v) On October 16, 2012, Endesa Chile began the collection process on all of the bank performance bonds guaranteeing compliance with the works and correct, timely execution of these works as specified in the agreement "Bocamina Thermal Plant Expansion Project", contract ACP-003.06. This is a turnkey project for a 350 MW coal-fired thermal

generation plant ("the contract") signed on July 25, 2007 between Empresa Nacional de Electricidad S.A. ("the owner") and the consortium consisting of (i) the Chilean company Ingeniería y Construcción Tecnimont Chile y Compañía Limitada; (ii) the Italian company Tecnimont SpA; (iii) the Brazilian company Tecnimont do Brasil Construcao e Administracao de Projetos Ltda; (iv) the Slovakian company Slovenske Energeticke Strojarne a.s. ("SES"); and (v) the Chilean company Ingeniería y Construcción SES Chile Limitada; (all referred to collectively as "the Contractor" or "the Consortium").

These performance bonds amounted to US\$74,795,164.44 and UF 796,594.29 (approximately US\$38,200,000). As of December 31, 2012 it was collected US\$93,992,554 of these bonds and currently it is still pending to collect US\$18,940,295, equivalent to ThCh\$11,492,024 in local currency (see Note 36.3.26 and 41).

Collection made on these bank performance bonds reduced the cost overruns incurred by the company due to breach of contract; they were capitalized into the Project.

Together collecting on the bonds, Endesa Chile has reserved all of the rights conferred upon it under the Contract and applicable national legislation to demand complete, timely compliance with the obligations agreed to by the Contractor.

On October 17, 2012, Endesa Chile filed an arbitration request with the International Chamber of Arbitration of Paris in order to enforce the rights conferred upon it under the Contract.

vi) Our Argentine subsidiary, Empresa Distribuidora Sur S.A., has seen its financial equilibrium seriously affected by the delay in the compliance with certain points of the Acta de Acuerdo agreement signed with the Argentine Government, particularly the twice-yearly rate adjustments recognized through the cost-monitoring mechanism (MMC) and the establishment of an Integral Rate Review (IRT) as provided for in this agreement.

At the close of the 2011 fiscal year, Enersis recorded an impairment loss in Property, plant and equipment for the company Empresa Distribuidora Sur S.A. As of December 31, 2014, the amount recorded is ThCh\$65,252,942 (see Note 3.e).

- vii) At the end of the 2012 fiscal year, our subsidiary Compañía Eléctrica Tarapacá S.A. recorded an impairment loss for ThCh\$12,578,098, an amount still in effect, to adjust the book value of its Property, plant and equipment to their recoverable value (see Note 3.e).
- viii) At the end of the 2014 fiscal year, our subsidiary Endesa Chile SA recorded an impairment loss provision for ThCh\$12,581,947 related to the Punta Alcalde project. This provision arises because the current definition of the project is not fully aligned with the strategy that the Company is reformulating, particularly with regard to technological leadership, and to community and environmental sustainability. Endesa Chile has decided to suspend the project pending clarification of its profitability (see Note 3.e).

18. INVESTMENT PROPERTY

The detail and changes in investment property during the 2014 and 2013 fiscal years are as follows:

Investment Properties	Investment Properties, Gross	Accumulated Depreciation, Amortization and Impairment ThCh\$	Investment Properties, Net
Balance at January 1, 2013	51,003,011	(4,080,041)	46,922,970
Additions	2,487,919	-	2,487,919
Disposals	(6,443,325)	2,127,925	(4,315,400)
Depreciation expense	-	(59,078)	(59,078)
Impairment losses recognized in income statement	-	(159,362)	(159,362)
Balance at December 31, 2013	47,047,605	(2,170,556)	44,877,049
Additions	1,463,242	-	1,463,242
Land sales (1)	(1,806,675)	-	(1,806,675)
Disposals related to the sale of subsidiaries (2)	(36,040,698)	-	(36,040,698)
Depreciation expense	-	(30,483)	(30,483)
Impairment reversals recognized in income statement	-	52,127	52,127
Closing balance investment properties at December 31, 2014	10,663,474	(2,148,912)	8,514,562

⁽¹⁾ The selling prices of investment properties disposed of during the 2014 and 2013 fiscal years were ThCh\$9,363,249 and ThCh\$16,510,931, respectively.

- Fair value measurement and hierarchy

The fair value of the Group's investment properties as of December 31, 2014 was ThCh\$12,272,521. This value was based on independent appraisals.

As of December 31, 2014, the market value of these properties has not changed significantly.

The hierarchy of these investment properties' fair values is as follows:

	Fair value measured at the end of the reporting period using:							
	Level 1	Level 3						
	ThCh\$	ThCh\$	ThCh\$					
Investment Properties	-	12,272,521	-					

See Note 3.h.

As of December 31, 2014 and 2013, the detail of income and expenses from investment properties is as follows:

	Balance at	
	12-31-2014	12-31-2013
Income and expense from investment properties	ThCh\$	ThCh\$
Rental income from investment properties	263,643	341,494
Income from the sale of investment properties (*)	9,363,249	16,510,931
Direct operating expense from investment properties generating rental income	(328,590)	(192,963)
Direct operating expense from investment properties not generating rental income (*)	(1,806,675)	(4,315,400)
Total	7,491,627	12,344,062

^(*) See Note 32.

The company has no repair, maintenance, acquisition, construction or development agreements that represent future obligations for the Group as of December 31, 2014 (ThCh\$971,776 as of December 31, 2013).

The Group has insurance policies to cover operational risks of its investment properties, as well as to cover legal claims against the Group that could potentially arise from exercising its business activity. The Group's management considers that the insurance policy coverage is sufficient against the risks involved.

⁽²⁾ See Note 32.

19. DEFERRED TAXES

a. The origin and changes in deferred tax assets and liabilities at December 31, 2014 and 2013 are as follows:

		Deferred Tax Assets Relating to								
		Accumulated Depreciation	Amortization	Provisions	Post- Employment Benefit Obligations	Revaluation of Financial Instruments	Tax Loss Carry forwards	Other	Deferred Tax Assets	
Balance at January 1, 2014		69,331,028	-	72,196,398	721,942	43,659,516	1,710,288	22,518,595	210,137,767

Balance at December 31, 2013		357,404,910	21,169,697	20,220	-	20,818	5,792,725	11,078,520	395,486,890

⁽¹⁾ See Note 2.4.1 and 5.

Recovery of deferred tax assets will depend on whether sufficient tax profits are obtained in the future. The Company believes that the future profit projections for its numerous subsidiaries will allow these assets to be recovered.

b. As of December 31, 2014, the Group has not recognized deferred tax assets related to tax losses carry forward totaling ThCh\$44,329,969 (ThCh\$25,233,492 at December 31, 2013). See Note 3.p.

The Group has not recognized deferred tax liabilities for taxable temporary differences associated with investment in subsidiaries and joint ventures, as it is able to control the timing of the reversal of the temporary differences and considers that it is probable that such temporary differences will not reverse in the foreseeable future. At December 31, 2014, the aggregate amount of taxable temporary differences associated with investments in subsidiaries and joint ventures for which deferred tax liabilities have not been recognized totaled ThCh\$1,940,029,172 (ThCh\$2,204,237,044 at December 31, 2013).

⁽²⁾ See Note 2.4.1 and 26.1.1

Additionally, the Group has not recognized deferred tax asset for deductible temporary differences which at December 31, 2014, totaled ThCh\$79.702.961 (ThCh\$ 109.648.898 at December 31, 2013), because that it is not probable that sufficient future taxable profits exist to recover such temporary differences.

The Group companies are potentially subject to income tax audits by the tax authorities of each country in which the Group operates. Such tax audits are limited to a number of annual tax periods and once these have expired audits of these periods can no longer be performed. Tax audits by nature are often complex and can require several years to complete. The following table presents a summary of tax years potentially subject to examination:

Country	Period
Chile	2012-2014
Argentina	2008-2014
Brazil	2009-2014
Colombia	2013-2014
Peru	2010-2014

Given the range of possible interpretations of tax standards, the results of any future inspections carried out by tax authorities for the years subject to audit can give rise to tax liabilities that cannot currently be quantified objectively. Nevertheless, Enersis Management estimates that the liabilities, if any, that may arise from such audits, would not significantly impact the Group companies' future results.

The effects of deferred tax on the components of other comprehensive income are as follows:

		12-31-2014			12-31-2013	
Effects of Deferred Tax on the Components of Other Comprehensive Income	Amount Before Tax ThCh\$	Income Tax Expense (Benefit) ThCh\$	Amount After Tax ThCh\$	Amount Before Tax ThCh\$	Income Tax Expense (Benefit) ThCh\$	Amount After Tax ThCh\$
	1.040	(1.460)	205	(2.252)	155	(1.010)
Available-for-sale financial assets	1,849	(1,462)	387	(2,273)	455	(1,818)
Cash flow hedge	(145,892,370)	35,887,996	(110,004,374)	(76,088,977)	12,332,516	(63,756,461)
Amount of other comprehensive income from associates and joint ventures accounted for using the equity method	13,476,871	-	13,476,871	8,367,223	-	8,367,223
Foreign currency translation	4,370,649	-	4,370,649	(76,723,893)	-	(76,723,893)
Gains (Losses) from defined-benefit pension plans	(36,681,734)	12,694,514	(23,987,220)	6,351,518	(2,603,231)	3,748,287
Income tax related to components of other income and expense debited or credited to Equity	(164,724,735)	48,581,048	(116,143,687)	(138,096,402)	9,729,740	(128,366,662)

c. In Chile, Law No. 20,780 was published in the Official Gazette on September 29, 2014. It changes the income tax system and other taxes, by replacing the current tax system in 2017 with two alternative tax systems: the attributed income system and partially integrated system.

This Law gradually increases the rate of income tax on corporate income. Thus, it will increase to 21% in 2014, to 22.5% in 2015 and to 24% in 2016. As from 2017 taxpayers choosing the attributed income system will be subject to a rate of 25%, while companies choosing the partially integrated system will be subject to a rate of 25.5% in 2017 and 27% in 2018.

Furthermore, this Law establishes that the partially integrated system will apply by default to open stock companies, unless a future Extraordinary Shareholders' Meeting agrees to adopt the attributed income system.

Enersis assumes that, since an Extraordinary Shareholders' Meeting has not agreed to adopt the alternative system, the partially integrated system applies by default. Therefore, changes in deferred tax assets and liabilities have been recognized, which occur as a direct effect of the increase in the corporate income tax rate on net income. Specifically, as of December 31, 2014 the net charge against income was a loss of ThCh\$62,035,245.

d. In Colombia, Law 1,739 dated 2014 increased from 8% to 9% indefinitely the rate for the specific income tax for financing social programs known as CREE, levied on taxable profits earned each year for the tax year 2016 onwards.

Additionally, this Law established the CREE surcharge of 5%, 6%, 8% and 9% for 2015, 2016, 2017 and 2018, respectively. The effect of temporary differences involving the payment of less or more income tax in the current year is recorded as a deferred tax credit or debit respectively at the tax rates in effect when the differences are reversed (39% in 2015 40% in 2016, 42% in 2017, 43% in 2018 and 34% from 2019), provided there is a reasonable expectation that such differences will reverse in the future and that the asset will generate sufficient taxable income.

Due to this rate increase, the Colombian subsidiaries have recognized changes in their deferred tax assets and liabilities as of December 31, 2014. The net effect on income was a profit of ThCh\$3,943,235.

e. In Peru, the rate of corporate income tax is 30% on taxable income, after deducting the employees profit share of 5% of taxable income, as of December 31, 2014 and 2013.

Law No. 30296 establishes that the applicable rate of corporate income tax on taxable income, after deducting the employees profit share will be as follows: 28% in 2015 and 2016, 27% in 2017 and 2018, and 26% from 2019 onwards.

Due to this rate increase, the Peruvian subsidiaries have recognized changes in their deferred tax assets and liabilities as of December 31, 2014. The net effect on income was a profit of ThCh\$24,818,773.

20. OTHER FINANCIAL LIABILITIES

The balance of other financial liabilities as of December 31, 2014 and 2013 is as follows:

	12-31-2	014	12-31-20	13
Other Financial Liabilities	Current ThCh\$	Non-current ThCh\$	Current ThCh\$	Non-current ThCh\$
Interest-bearing borrowings	418,266,381	3,167,948,954	785,231,174	2,688,538,096
Hedging derivatives (*)	995,059	114,861,592	117,341,051	97,231,764
Non-hedging derivatives (**)	2,544,239	6,286,982	1,410,556	-
Obligation for Túnel el Melón concession	-	-	2,692,424	4,479,251
Total	421,805,679	3,289,097,528	906,675,205	2,790,249,111

(*) See Note 22.2.a (**) See Note 22.2.b

20.1 Interest-bearing borrowings

The detail of current and non-current interest-bearing borrowings as of December 31, 2014 and 2013 is as follows:

		12-31-2	014	12-31-20)13
Classes of Loans that Accrue Interest		Current	Non-current	Current	Non-current
		ThCh\$	ThCh\$	ThCh\$	ThCh\$
Bank loans		42,325,846	247,216,989	154,917,772	219,963,968
Unsecured obligations		308,925,119	2,565,417,993	407,412,807	2,179,772,922
Secured obligations		-	-	4,828,233	-
Financial leases		18,123,424	83,661,174	14,046,903	87,284,708
Other obligations		48,891,992	271,652,798	204,025,459	201,516,498
To	otal	418,266,381	3,167,948,954	785,231,174	2,688,538,096

Bank loans by currency and contractual maturity as of December 31, 2014 and 2013 are as follows:

Appendix No. 4 letter d) presents details of estimated future cash flows (undiscounted) that the Group will have to disburse to settle these Other Obligations.

20.4 Hedged debt

Of the U.S. dollar denominated debt held by Enersis, as of December 31, 2014, ThCh\$761,130,114 is related to future cash flow hedges for the Group's U.S. dollar-linked operating income (ThCh\$754,177,869 as of December 31, 2013) (See Note 3.n).

The following table details changes in "Reserve for cash flow hedges" as of December 31, 2014, 2013 and 2012 due to exchange differences of this debt:

	12-31-2014	12-31-2013	12-31-2012
Balance in hedging reserves (hedging income) at the beginning of the			
period, net	2,415,439	37,372,801	30,554,503
Foreign currency exchange differences recorded in equity, net	(31,401,584)	(24,792,601)	17,591,453
Recognition of foreign currency exchange differences in profit and loss, net	(10,086,797)	(10,087,806)	(10,657,638)
Foreign currency translation differences	289,343	(76,955)	(115,517)
Balance in hedging reserves (hedging income) at the end of the period, net	(38,783,599)	2,415,439	37,372,801

20.5 Other information

As of December 31, 2014, the Enersis Group has long-term lines of credit available for use amounting to ThCh\$353,263,488 (ThCh\$208,900,680 at December 31, 2013)

21. RISK MANAGEMENT POLICY

The Group's companies are exposed to certain risks that are managed by systems that identify, measure, limit concentration of, and monitor these risks.

The main principles in the Group's risk management policy include the following:

- Compliance with good corporate governance standards.
- Strict compliance with all the Group's internal policies.
- Each business and corporate area determines:
 - I. The markets in which it can operate based on its knowledge and ability to ensure effective risk management;
 - II. Criteria regarding counterparts;
 - III. Authorized operators.
- Business and corporate areas establish their risk tolerance in a manner consistent with the defined strategy for each market in which they operate.
- All of the operations of the businesses and corporate areas are conducted within the limits approved for each case.
- Businesses, corporate areas, lines of business and companies design the risk management controls necessary to
 ensure that transactions in the markets are conducted in accordance with the Enersis policies, standards, and
 procedures.

21.1 Interest rate risk

Changes in interest rates affect the fair value of assets and liabilities bearing fixed interest rates, as well as the expected future cash flows of assets and liabilities subject to floating interest rates.

The objective of managing interest rate risk exposure is to achieve a balance in the debt structure to minimize the cost of debt with reduced volatility in profit or loss.

In compliance with the current interest rate hedging policy, the proportion of fixed debt and/or hedged debt over the net total debt was 86% as of December 31, 2014.

Depending on the Group's estimates and on the objectives of the debt structure, hedging transactions are performed by entering into derivatives contracts that mitigate interest rate risk. Derivative instruments currently used to comply with the risk management policy are interest rate swaps to set floating rate at fixed rate.

The financial debt structure of the Group detailed by the mostly strongly hedged fixed and floating interest rates on total net debt, net of hedging derivative instruments, is as follows:

Net position:

	12-31-2014 %	12-31-2013 %
Fixed interest rate	86%	72%
Floating interest rate	14%	28%
Total	100%	100%

21.2 Exchange rate risk

Exchange rate risks involve basically the following transactions:

- Debt taken on by the Group's companies that is denominated in a currency other than that in which its cash flows are indexed.
- Payments to be made for the acquisition of project-related materials and for corporate insurance policies in a currency other than that in which its cash flows are indexed.
- Income in Group companies directly linked to changes in currencies other than that of its cash flows.
- Cash flows from foreign subsidiaries to the Chilean parent company which are exposed to exchange rate fluctuations.

In order to mitigate foreign currency risk, the Group's foreign currency risk management policy is based on cash flows and includes maintaining a balance between U.S. dollar flows and the levels of assets and liabilities denominated in this currency. The objective is to minimize the exposure to variability in cash flows that are attributable to foreign exchange risk.

The hedging instruments currently being used to comply with the policy are currency swaps and forward exchange contracts. In addition, the policy seeks to refinance debt in the functional currency of each of the Group's companies.

21.3 Commodities risk

The Group has a risk exposure to price fluctuations in certain commodities, basically due to:

- Purchases of fuel used to generate electricity.
- Energy purchase/sale transactions that take place in local markets.

In order to reduce the risk in situations of extreme drought, the Group has designed a commercial policy that defines the levels of sales commitments in line with the capacity of its generating power plants in a dry year. It also includes risk mitigation terms in certain contracts with unregulated customers and with regulated customers subject to long-term tender processes, establishing indexation polynomials that allow for reducing commodities exposure risk.

Considering the operating conditions faced by the power generation market in Chile, with drought and highly volatile commodity prices on international markets, the Company is constantly verifying the advisability of using hedging to lessen the impacts that these price swings have on its results. At December 31, 2014 the Company had swap hedges for 266,000 barrels of Brent oil for January 2015 and 350,000 MMBTU of Henry Hub gas for February 2015. At December 31, 2013, the Group had no derivative operations in effect for commodities.

Depending on operating conditions, which are constantly being updated, these hedges may be modified or may cover other commodities.

21.4 Liquidity risk

The Group maintains a liquidity risk management policy that consists of entering into long-term committed banking facilities and temporary financial investments for amounts that cover the projected needs over a period of time that is determined based on the situation and expectations for debt and capital markets.

The projected needs mentioned above include maturities of financial debt, net of financial derivatives. For further details regarding the features and conditions of financial obligations and financial derivatives, See Notes 20 and 22, and Appendix No. 4.

As of December 31, 2014, the Group has cash and cash equivalent totaling ThCh\$1,704,745,491 and unconditionally available lines of long-term credit totaling ThCh\$353,263,488. As of December 31, 2013, the Group had ThCh\$1,606,387,569 in cash and cash equivalents and ThCh\$208,900,680 in unconditionally available lines of long-term credit.

21.5 Credit risk

The Enersis Group closely monitors its credit risk.

Trade receivables:

The credit risk for receivables from the Group's commercial activity has historically been very low, due to the short term period of collections from customers, resulting in non-significant cumulative receivables amounts. This situation applies to both the electricity generating and distribution lines of business.

In our electricity generating business, some countries' regulations allow the suspension of energy service to customers with outstanding payments, and most contracts have termination clauses for payment default. The Company monitors its credit risk on an ongoing basis and measures quantitatively its maximum exposure to payment default risk, which, as stated above, is very low

In our electricity distribution companies, the suspension of energy service for customers in payment default is permitted in all cases, in accordance with current regulations in each country. This facilitates our credit risk management, which is also low in this line of business.

Financial assets:

Cash surpluses are invested in the highest-rated local and foreign financial entities (with risk rating equivalent to investment grade where possible) with thresholds established for each entity.

Banks that have received investment grade ratings from the three major international rating agencies (Moody's, S&P, and Fitch) are selected for making investments.

Investments may be backed with treasury bonds from the countries in which the company operates and/or with commercial papers issued by the highest rated banks; the latter are preferred, as they offer higher returns (always in line with current investment policies).

Derivative instruments are entered into with entities with solid creditworthiness; all derivative transactions are performed with entities with investment grade ratings.

21.6 Risk measurement

The Enersis Group measures the Value at Risk (VaR) of its debt positions and financial derivatives in order to monitor the risk assumed by the Company, thereby reducing volatility in the income statement.

The portfolio of positions included for purposes of calculating the present Value at Risk include:

- Financial debt
- Hedge derivatives for debt, dividends, and projects.

The VaR determined represents the potential variation in value of the portfolio of positions described above in one day with a 95% confidence level. To determine the VaR, we take into account the volatility of the risk variables affecting the value of the portfolio of positions including:

- U.S. dollar Libor interest rate.

- The different currencies with which our companies operate and the customary local indices used in the banking industry.
- The exchange rates of the various currencies used in the calculation.

The calculation of VaR is based on generating possible future scenarios (at one day) of market values (both spot and term) for the risk variables, using Bootstrapping simulations. The number of scenarios generated ensures compliance with the simulation convergence criteria. The table of volatilities and correlations between the various risk variables calculated based on the historical values of the logarithmic price returns has been applied to simulate the future price scenario.

Once the price scenarios have been obtained, the fair value of the portfolio is calculated using such scenarios, thereby obtaining a distribution of possible values at one day. The one-day 95%-confidence VaR number is calculated as the 5% percentile of the potential variations in the fair value of the portfolio in one day.

Taking into account the assumptions described above, the VaR of the previously discussed positions, broken down by type of position, is shown in the following table:

Financial Positions	12-31-2014 ThCh\$	12-31-2013 ThCh\$
Interest rate	33,135,363	17,236,855
Exchange rate	1,065,881	3,074,168
Correlation	(1,187,257)	(390,965)
Total	33,013,987	19,920,058

These values represent the potential increase of the Debt and Derivatives' Portfolio, thus these Values At Risk are inherently related, among other factors, to the Portfolio's value at each years' end.

The VaR positions have varied during the fiscal years 2014 and 2013 depending on the start/maturity of operations.

22. FINANCIAL INSTRUMENTS

22.1 Financial instruments, classified by type and category

a) The detail of financial assets, classified by type and category, as of December 31, 2014 and 2013 is as follows:

			12-31-2014			
	Financial assets held for trading	Financial assets at fair value with change in profit or loss	Held-to-maturity investments	Loans and receivables	Available-for-sale financial assets	Financial derivatives for hedging

Total	10,510,764	-	5,214,320,539	214,572,815

22.2 Derivative instruments

The risk management policy of the Group uses primarily interest rate and foreign exchange rate derivatives to hedge its exposure to interest rate and foreign currency risks.

The Company classifies its hedges as follows:

- Cash flow hedges: Those that hedge the cash flows of the underlying hedged item.
- Fair value hedges: Those that hedge the fair value of the underlying hedged item.
- **Non-hedge derivatives:** Financial derivatives that do not meet the requirements established by IFRS to be designated as hedge instruments are recorded at fair value with changes in net income (assets held for trading).

a) Assets and liabilities for hedge derivative instruments

As of December 31, 2014 and 2013, financial derivative transactions qualifying as hedge instruments resulted in recognition of the following assets and liabilities in the statement of financial position:

		12-31-	2014			12-31	-2013	
	A	Assets	Lia	bilities	As	sets	Liab	ilities
	Current	Non-current	Current	Non-current	Current	Non-current	Current	Non-current
	ThCh\$	ThCh\$	ThCh\$	ThCh\$	ThCh\$	ThCh\$	ThCh\$	ThCh\$
Interest rate hedge:	193,246	3,533,655	14,637	582,788	4,013,126	4,393,690	1,245,586	1,079,984
Cash flow hedge	193,246	3,533,655	14,637	582,788	4,013,126	4,393,690	1,245,586	1,079,984

Cash flow hedge	1,221,342	3,695,636	980,421	114,278,805	21,129,599	9,816	116,081,484	94,681,404
Fair value hedge	-	-	-	-	-	-	13,981	1,470,376
TOTAL	1,414,588	7,229,291	995,058	114,861,593	25,142,725	4,403,506	117,341,051	97,231,764

- General information on hedge derivative instruments

Hedge derivative instruments and their corresponding hedged instruments are shown in the following table:

As of December 31, 2014 and 2013, the Group has not recognized significant gains or losses for ineffective cash flow hedges.

			Fair Value of Hedged	Fair Value of Hedged
Detail of Hedge	Description of Hedge		Instruments	Instruments
Instruments	Instrument	Description of Hedged Instrument	12/31/2014	12/31/2013
SWAP	Interest rate	Bank loans	3,129,476	6,081,246
SWAP	Exchange rate	Bank loans	-	(1,484,357)
SWAP	Exchange rate	Unsecured obligations (bonds)	(110,342,248)	(189,623,473)

For fair value hedges the gain or losses recognized on the hedging instrument and on the underlying hedged item is detailed in the following table:

	12-3	1-2014	12-3	1-2013	12-3	1-2012
	Gains ThCh\$	Losses ThCh\$	Gains ThCh\$	Losses ThCh\$	Gains ThCh\$	Losses ThCh\$
Hedge instrument	610,861	-	697,443	-	381,011	-
Underlying item	-	1,090,341	-	1,556,853	-	2,167,393
TOTAL	610,861	1,090,341	697,443	1,556,853	381,011	2,167,393

b) Financial derivative instruments assets and liabilities at fair value with changes in net income

As of December 31, 2014 and 2013, financial derivative transactions recorded at fair value with changes in net income, resulted in the recognition of the following assets and liabilities in the statement of financial position:

	12-31-2014				12	-31-2013		
	Assets	Liabilities	Assets	Liabilities	Assets	Liabilities	Assets	Liabilities
	Current	Current	Non-current	Non-current	Current	Current	Non-current	Non-current
	ThCh\$	ThCh\$	ThCh\$	ThCh\$	ThCh\$	ThCh\$	ThCh\$	ThCh\$
Non-hedging derivative instruments	7,061,715	2,544,239	22,002	6,286,982	4,107,362	1,410,556	-	-

c) Other information on derivatives:

The following tables present the fair value of hedging and non-hedging derivatives entered into by the Group as well as the remaining contractual maturities as of December 31, 2014 and 2013:

	12-31-2014								
Financial Derivatives		Notional Value							
Financiai Derivatives	Fair Value	Less than					More than

Interest rate hedge:	6,081,246	127,289,996	33,022,809	42,602,326	20,964,119	-	-	223,879,250	
Cash flow hedge	6,081,246	127,289,996	33,022,809	42,602,326	20,964,119	-	-	223,879,250	
Exchange rate hedge:	(191,107,830)	528,667,695	2,681,268	220,782,813	-	-	-	752,131,776	
Cash flow hedge	(189,623,473)	527,137,107	1,041,243	220,782,813	-	-	-	748,961,163	
Fair value hedge	(1,484,357)	1,530,588	1,640,025	-	-	-	-	3,170,613	
Derivatives not designated for hedge accounting	2,696,806	294,635,535	-	-	-	-		294,635,535	
TOTAL	(182,329,778)	950,593,226	35,704,077	263,385,139	20,964,119	-	-	1,270,646,561	

The hedging and non-hedging derivatives contractual maturities do not represent the Group's total risk exposure, as the amounts presented in the above tables have been drawn up based on undiscounted contractual cash inflows and outflows for their settlement.

22.3 Fair value hierarchies

Financial instruments recognized at fair value in the consolidated statement of financial position are classified based on the hierarchies described in Note 3.g.5.

The following table presents financial assets and liabilities measured at fair value as of December 31, 2014 and 2013:

Financial Instruments Measured at Fair Value	Fair Value Measured at End of Reporting Period Using:				
	12-31-2014 ThCh\$	Level 1 ThCh\$	Level 2 ThCh\$	Level 3 ThCh\$	
Financial Assets					
Financial derivatives designated as cash flow hedge	8,643,879	-	8,643,879	-	
Financial derivatives not designated for hedge accounting	7,083,717	-	7,083,717	-	
Financial assets at fair value with change in net income	52,677,337	52,677,337	-	-	
Available-for-sale financial assets, non-current	493,285,774	362,169	492,923,605	-	
Total	561,690,707	53,039,506	508,651,201	-	
Financial Liabilities					
Financial derivatives designated as cash flow hedge	115,856,651		115,856,651	-	
Financial derivatives not designated for hedge accounting	8,831,221	-	8,831,221	-	
Total	124,687,872	-	124,687,872	-	

Financial Instruments Measured at Fair Value	Fair Value Measured at End of Reporting Period Using:				
	12-31-2013	Level 1	Level 2	Level 3	
	ThCh\$	ThCh\$	ThCh\$	ThCh\$	
Financial Assets					
Financial derivatives designated as cash flow hedge	29,546,231	-	29,546,231	-	
Financial derivatives not designated for hedge accounting	4,107,362	-	4,107,362	-	
Financial assets at fair value with change in net income	163,288,698	163,288,698	-	-	
Available-for-sale financial assets, non-current	448,136,514	29,195	448,107,319	-	
Total	645,078,805	163,317,893	481,760,912	-	
Financial Liabilities					
Financial derivatives designated as cash flow hedge	213,088,458	-	213,088,458	-	
Financial derivatives designated as fair value hedge	1,484,357	-	1,484,357	-	
Financial derivatives not designated for hedge accounting	1,410,556	-	1,410,556	-	
Interest-bearing borrowings, short term	4,393,053	-	4,393,053	-	
Interest-bearing borrowings, long term	4,707,155	-	4,707,155	-	
Total	225,083,579	-	225,083,579	-	

22.3.1 The following is the reconciliation between opening and closing balances for financial instruments whose fair value is classified at level 3:

Non-current Interest-bearing Borrowings	ThCh\$
Balance at January 1, 2013	2,022,260
Total profit recognized in financial profit or loss	(2,022,260)
Balance at December 31, 2013	-
Total profit recognized in financial profit or loss	-
Balance at December 31, 2014	-

The fair value of Level 3 has been calculated by applying a traditional discounted cash flow method. These projected cash flows include assumptions from within the company that are primarily based on estimates for prices and levels of energy production and firm capacity, as well as the costs of operating and maintaining some of our plants.

None of the possible reasonable scenarios foreseeable in the assumptions mentioned in the above paragraph would result in a significant change in the fair value of the financial instruments included at this level.

23. TRADE AND OTHER CURRENT PAYABLES

The breakdown of Trade and Other Payables as of December 31, 2014 and 2013 is as follows:

	Current		Non-current	
Trade and other payables	12-31-2014 12-31-2013 ThCh\$ ThCh\$		12-31-2014 ThCh\$	12-31-2013 ThCh\$
Trade payables	822,851,379	503,498,609	7,147,088	_
Other payables	1,466,025,571	1,011,505,045	152,238,433	23,063,878
Total	2,288,876,950	1,515,003,654	159,385,521	23,063,878

The detail of Trade and Other Current Payables as of December 31, 2014 and 2013 is as follows:

	C	Current		ırrent
	Cur	rent	One to five years	
Trade and other payables	12-31-2014 ThCh\$	12-31-2013 ThCh\$	12-31-2014 ThCh\$	12-31-2013 ThCh\$

Mitsubishi contract (LTSA)	34,214,611	24,837,227	-	-
Obligations for social programs	12,869,529	9,647,096	-	-
Interest payments on trade payables	44,497,783	7,753,216	-	-
Other payables	40,774,279	16,087,098	9,244,924	6,165,294
Total	2,288,876,950	1,515,003,654	159,385,521	23,063,878

See Note 21.4 for the description of the liquidity risk management policy.

- (*) This corresponds mainly to fines and complaints our Argentine subsidiary Edesur S.A. has received during this and previous fiscal years from the regulatory agency due to business service quality, technical product quality, and public safety. These fines have not been paid, as some were suspended under the Agreement Act signed in 2007 with the Argentine government, and others are pending until the Integral Tariff Review (ITR) takes place (see Note 4.2).
- (1) Includes M\$418,830,124 in liabilities owed to Cammesa by our subsidiary Argentine Edesur S.A. These liabilities are greater than the account receivable by \$235,484,218 recognized by Edesur product of the implementation of Resolution N°250/13 Cost Monitoring Mechanism (MMC). This resolution instructed CAMMESA to issue Sales Liquidation with Expiration Dates to Define (LVFVD) in favour of Edesur for accounts receivables, and accept these LVFVD as part payment of the debts of Edesur. As of today, CAMMESA has not issued any LVFVD to follow for cancellations.

The detail of trade payables, both up to date and past due as of December 31, 2014 and 2013, are presented in Appendix 7.

24. PROVISIONS

a) The breakdown of provisions as of December 31, 2014 and 2013 is as follows:

	Cu	rrent	Non-current		
Provisions	12-31-2014	12-31-2013	12-31-2014	12-31-2013	
	ThCh\$	ThCh\$	ThCh\$	ThCh\$	
Provision for legal proceedings	58,620,425	56,337,107	165,347,715	164,694,598	
Decommissioning or restoration (1)	568,465	-	31,647,729	24,109,594	
Provision for suppliers and services	6,245,568	2,543,067	-	-	
Provision for environmental issues	9,675,454	12,139,002	248,397	5,163,161	
Other provisions	15,112,772	16,290,187	-	-	
Total	90,222,684	87,309,363	197,243,841	193,967,353	

The expected timing and amount of any cash outflows related to the above provisions is uncertain and depends on the final resolution of the provisioned matters (See note 3.m)

(3) See Note 3a

b) Changes in provisions as of December 31, 2014 and 2013 are as follows:

Changes in Provisions	Legal Proceedings ThCh\$	Decommissioning or Restoration ThCh\$	Other Provisions ThCh\$	Total ThCh\$
Balance at January 1, 2014	221,031,705	24,109,594	36,135,417	281,276,716
Additional provisions	-	6,857,384	-	6,857,384

Balance at December 31, 2013	221.031.705	24.109.594	36,135,417	281,276,716

25. EMPLOYEE BENEFIT OBLIGATIONS

25.1 General information

Enersis and certain of its subsidiaries in Chile, Brazil, Colombia, and Argentina provide various post-employment benefits for all or some of their active or retired employees. These benefits are calculated and recorded in the financial statements according to the criteria described in Note 3.m.1, and include primarily the following:

a) Defined benefit plans:

- Complementary pension: The beneficiary is entitled to receive a monthly amount that supplements the pension obtained from the respective social security system.
- Employee severance indemnities: The beneficiary receives a certain number of contractual salaries upon retirement. Such benefit is subject to a vesting minimum service requirement period, which depending on the company, varies within a range from 5 to 15 years.
- Electricity: The beneficiary receives a monthly bonus to cover a portion of his/her billed residential electricity consumption.
- Health benefit: The beneficiary receives health coverage in addition to that to which s/he is entitled under applicable social security regime.

b) Other benefits

Five-year benefit: A benefit certain employees receive after 5 years and which begin to accrue from the second year onwards.

<u>Unemployment:</u> A benefit paid regardless of whether the employee is fired or leaves voluntarily. This benefit accrues on a daily basis and is paid at the time of contract termination (although the law allows for partial withdrawals for housing and education).

<u>Seniority bonuses:</u> There is an agreement to give workers ("subject to the collective agreement") an extraordinary bonus for years of service upon completion of the equivalent of five years of actual work.

c) Defined contribution benefits:

The Group makes contributions to a retirement benefit plan where the beneficiary receives additional pension supplements upon his/her retirement, disability or death.

25.2 Details, changes and presentation in financial statements

a) The post-employment obligations associated with defined benefits plans and the related assets plan as of December 31, 2014 and 2013 are detailed as follows:

General ledger accounts:

	Bala	nce at
	12-31-2014 ThCh\$	12-31-2013 ThCh\$
Post-employment obligations, non-current	269,930,412	238,514,991
Total Liabilities	269,930,412	238,514,991
Total post-employment obligations, net	269,930,412	238,514,991

Reconciliation with general ledger accounts:

	Balar	ice at
	12-31-2014 ThCh\$	12-31-2013 ThCh\$
Post-employment obligations	588,148,279	521,850,486
(-) Fair value of asset plan (*)	(368,008,708)	(322,830,274)
Total	220,139,571	199,020,212
Amount not recognized due to limit on Benefit Plan Assets (**)	33,710,733	39,494,779
Minimum financing required (IFRIC 14) (***)	16,080,108	-
Total post-employment obligations, net	269,930,412	238,514,991

- (*) Plan assets to fund defined benefit plans in our Brazilian subsidiaries (Ampla and Coelce) only; the remaining defined benefit plans in our other subsidiaries are unfunded.
- (**) In Coelce, certain pension plans currently have an actuarial surplus amounting to ThCh\$33,710,733 at December 31, 2014 (ThCh\$39,494,779 in 2013). This actuarial surplus was not recognized as an asset in accordance with IFRIC 14 The Limit on a Defined Benefit Asset, Minimum Funding Requirements and their Interaction. This was due to the fact that the Complementary Social Security (SPC) regulations CGPC Resolution 26/2008 states that goodwill can only be used by the sponsor if the contingency reserve on the balance sheet of the Foundation is at the maximum percentage (25% of reserves). This ensures the financial stability of the plan based on the volatility of these obligations. If the surplus exceeds this limit, it may be used by the sponsor to reduce future contributions or be reimbursed to the sponsor. At Coelce, this proportion is less than 5% at December 31, 2014.
- (***) In Ampla, at the end of 2014, ThCh\$16,080,108 has been recognized in accordance with the provisions of IFRIC 14 The Limit on a Defined Benefit Asset, Minimum Funding Requirements and their Interaction. This corresponds to actuarial debt contracts that the company signed with Brasiletros (an institution providing pension funds exclusively to employees and retired employees of Ampla). This was done to equalize deficits on certain pension plans, since the sponsor assumes responsibility for these plans, in accordance with current legislation.

The following table presents the balance recorded in the consolidated statement of financial position as a result of the difference between the actuarial liability from defined benefit commitments and the fair value of the assets affected as of December 31, 2014 and the close of the four previous fiscal years:

12-31-2014	12-31-2013	12-31-2012	31-12-2011	31-12-2010
ThCh\$	ThCh\$	ThCh\$	ThCh\$	ThCh\$

b) The following amounts were recognized in the consolidated statement of comprehensive income as of December 31, 2014, 2013 and 2012:

Expense Recognized in Profit or Loss	12-31-2014 ThCh\$	12-31-2013 ThCh\$	12-31-2012 ThCh\$
Current service cost for defined benefits plan	4,513,850	4,462,712	3,689,477
Interest cost for defined benefits plan	59,981,707	54,773,138	53,828,477
Interest income from the plan's assets	(42,145,223)	(37,219,214)	(34,379,133)
Past service costs	667,153	-	-
Interest cost on asset ceiling components	5,348,952	2,422,955	-
Expenses recognized in Profit or Loss	28,366,439	24,439,591	23,138,821
(Gains) losses from new measurements of defined benefit plans	36,681,734	(6,351,518)	14,044,750
Total expense recognized in Comprehensive Income	65,048,173	18,088,073	37,183,571

c) The presentation of net actuarial liabilities as of December 31, 2014 and 2013 are as follows

Net Actuarial Liabilities	ThCh\$
Balance at January 1, 2013	256,161,368
Net interest cost	19,976,881
Service cost during the period	4,462,712
Benefits paid during the period	(15,517,133)
Contributions during the period	(14,383,865)
Actuarial (gains) losses from changes in financial assumptions	(100,972,717)
Actuarial (gains) losses from changes in seniority adjustments	6,468,147
Performance of plan assets, excluding interest	75,783,858
Changes in the asset limit	15,853,780
Foreign currency translation differences	(9,318,040)
Balance at December 31, 2013	238,514,991
Net interest cost	23,185,436
Service cost during the period	5,181,003
Benefits paid during the period	(15,957,887)
Contributions during the period	(17,998,323)
Actuarial (gains) losses from changes in financial assumptions	26,435,894
Actuarial (gains) losses from changes in seniority adjustments	22,302,042
Performance of plan assets, excluding interest	(13,293,908)
Changes in the asset limit	(12,687,133)
Minimum financing required (IFRIC 14)	16,080,108
Transfer to assets classified as held for sale	(102,423)
Defined benefit plan obligations from business combinations	1,297,048
Foreign currency translation differences	(3,026,436)
Net actuarial liabilities at December 31, 2014	269,930,412

d) The balance and changes in post-employment defined benefit obligations as of December 31, 2014 and 2013 are as follows:

Actuarial Value of Post-employment Obligations	ThCh\$
Balance at January 1, 2013	628,823,491
Current service cost	4,462,712
Interest cost	54,773,138
Contributions from plan participants	1,137,338
Actuarial (gains) losses from changes in financial assumptions	(100,972,717)
Actuarial (gains) losses from changes in seniority adjustments	6,468,147
Foreign currency translation	(24,305,459)
Benefits paid	(48,536,164)
Balance at December 31, 2013	521,850,486
Current service cost	4,513,850
Interest cost	59,981,707
Contributions from plan participants	513,813
Actuarial (gains) losses from changes in financial assumptions	26,435,894
Actuarial (gains) losses from changes in seniority adjustments	22,302,042
Foreign currency translation	2,634,240
Benefits paid	(51,945,531)
Defined benefit plan obligations from the cost of past service	667,153
Defined benefit plan obligations from business combinations	1,297,048
Transfer to assets classified as held for sale	(102,423)
Balance at December 31, 2014	588,148,279

As of December 31, 2014, out of the total amount of post-employment benefit obligations, 9.58% is from defined benefit plans in Chilean companies (8.25% at December 31, 2013). 74.97% is from defined benefit plans in Brazilian companies (74.67% at December 31, 2013). 12.81% is from defined benefit plans in Colombian companies (14.82% at December 31, 2013). 2.18% is from defined benefit plans in Argentine subsidiaries (1.85% at December 31, 2013); and the remaining 0.46% is from defined benefit plans in Peruvian companies (0.41% at December 31, 2013)

e) Changes in the fair value of the benefit plan assets are as follows:

Fair Value of Benefit Plan Assets	ThCh\$
Balance at January 1, 2013	(393,880,165)
Interest income	(37,219,214)
Performance of plan assets, excluding interest	75,783,858
Foreign currency translation	14,987,419
Employer contributions	(1,137,338)
Contributions paid	(14,383,865)
Benefits paid	33,019,031
Balance at December 31, 2013	(322,830,274)
Interest income	(42,145,223)
Performance of plan assets, excluding interest	(13,293,908)
Foreign currency translation	(7,214,811)
Employer contributions	(17,998,323)
Contributions paid	(513,813)
Benefits paid	35,987,644
Balance at December 31, 2014	(368,008,708)

f) The main categories of benefit plan assets are as follows:

Cotogowy of Donofit Dlon Assets	12-3	1-2014	12-31-2013		
Category of Benefit Plan Assets	ThCh\$	%	ThCh\$	%	
Equity instruments (variable income)	46,892,034	13%	52,901,001	16%	
Fixed-income assets	270,067,933	73%	232,840,825	72%	
Real Estate investments	41,758,489	11%	24,609,293	8%	
Other	9,290,252	3%	12,479,155	4%	
Total	368,008,708	100%	322,830,274	100%	

The plans for retirement benefits and pension funds held by our Brazilian subsidiaries, Ampla and Coelce, maintain investments as determined by the resolutions of the National Monetary Council, ranked in fixed income, equities and real estate. Fixed income investments are predominantly invested in federal securities. Regarding equities, Faelce (an institution providing pension funds exclusively to employees and retired employees of Coelce) holds common shares of Coelce, while Brasiletros (a similar institution for employees of Ampla) holds shares in investment funds with a portfolio traded on Bovespa (the São Paulo Stock Exchange). With regards to real estate, both foundations have properties that are currently leased to Ampla and Coelce.

g) Reconciliation of asset ceiling:

Reconciliation of Asset Ceiling	ThCh\$
Balance at January 1, 2013	21,218,042
Interest on assets not recognized	2,422,955
Other changes in assets not recognized due to asset limit	17,475,375
Foreign currency exchange differences	(1,621,593)
Balance at December 31, 2013	39,494,779
Interest on assets not recognized	5,348,952
Other changes in assets not recognized due to asset limit	(12,687,133)
Foreign currency exchange differences	1,554,135
Total asset ceiling at December 31, 2014	33,710,733

The following table presents the assets affected by the plans and invested in shares, leases and real estate owned by the Group:

	12-31-2014 ThCh\$	12-31-2013 ThCh\$
Equity instruments	2	3
Real Estate	24,699,453	21,899,207
Total	24,699,455	21,899,210

Other disclosures:

• Actuarial assumptions:

As of December 31, 2014 and 2013 the following assumptions were used in the actuarial calculation of defined benefits:

	C	hile		Brazil	Cole	ombia	Arge	entina	Po	eru
	12-31-2014	12-31-2013	12-31-2014	12-31-2013	12-31-2014	12-31-2013	12-31-2014	12-31-2013	12-31-2014	12-31-2013
Discount rates used	4.60%	5.40%	12.52%	11.82% - 12.44%	7.04%	7.25%	5.50%	5.50%	6.35%	6.82%
Expected rate of salary increases	4.00%	3.00%	9.18%	7.61%	4.00%	4.00%	0.00%	0.00%	3.00%	3.00%
Mortality tables	RV -2009	RV -2004	AT 2000	AT 2000	RV 2008	RV 2008	RV 2004	RV 2004	RV 2009	RV 2004

Sensitivity

As of December 31, 2014, the sensitivity of the value of the actuarial liability for post-employment benefits to variations of 100 basis points in the discount rate assumes a decrease of ThCh\$46,833,941 (ThCh\$41,964,612 at December 31, 2013) if the rate rises and an increase of ThCh\$56,665,239 (ThCh\$49,310,554 at December 31, 2013) if the rate falls.

• Defined contributions

The total expense recognized in the consolidated statement of comprehensive income within line item "Employee expenses" represents contributions payable to the defined contribution plans by the Group. For the year ended December 31, 2014, the amounts recognized as expenses were ThCh\$4,700,327 (ThCh\$3,140,681 at December 31, 2013).

• Future disbursements

The estimates available indicate that ThCh\$38,179,137 will be disbursed for defined benefit plans in the coming year.

• Length of commitments

The Group's obligations have a weighted average length of 11.9 years, and the flow for benefits for the next 5 years and more is expected to be as follows:

Years	ThCh\$
1	58,821,601
2	51,309,982
3	50,397,348
4	50,636,795
5	51,232,905
Over 5	238,162,020

F-103

26. EQUITY

26.1 Equity attributable to the shareholders of Enersis

26.1.2 Subscribed and paid capital and number of shares

The Enersis Extraordinary Shareholders' Meeting held on December 20, 2012 approved a capital increase of ThCh\$2,844,397,890 divided into 16,441,606,297 shares of single series nominative common stock, non-preference and with no par value.

The shares were paid for as follows:

a) Endesa S.A. made a non-monetary payment for a total amount of ThCh\$1,724,400,000 corresponding to 9,967,630,058 shares of Enersis stock at a price of Ch\$173 per share.

For more information on the stakes contributed by Endesa S.A., see Note 6.

b) Cash contribution from non-controlling interests at a price of Ch\$173 per share.

During the preemptive right period for the subscription of shares which was from February 25 to March 26, 2013, a total of 16,284,562,981 shares were subscribed and paid up, equivalent to 99.04% of the total authorized shares, leaving a total of 157,043,316 shares unsubscribed. Of the subscribed and paid-up shares, 9,967,630,058 shares corresponded to Endesa S.A. and 6,316,932,923 shares to non-controlling interests, of which 1,675,441,700 were subscribed in the U.S. (33,508,834 in ADRs).

The 157,043,316 shares still to be placed were auctioned on March 28, 2013 at Ch\$182.3 per share. The total amount raised in the auction was ThCh\$28,628,996, which includes a share placement surcharge of ThCh\$1,460,503.

Given the increase, the share capital of Enersis as of December 31, 2014 and 2013 was ThCh\$5,804,447,986 and ThCh\$5,669,280,725 respectively, divided into 49,092,772,762 shares.

As of December 31, 2014, all of the shares issued by Enersis are subscribed and paid up, and they are listed for trade on the Bolsa de Comercio de Santiago de Chile, the Bolsa Electrónica de Chile, the Bolsa de Valores de Valparaiso, the New York Stock Exchange (NYSE), and the Bolsa de Valores Latinoamericanos of the Bolsa de Madrid (LATIBEX). The situation was similar at December 31, 2013.

The share premium corresponds to the share placement surcharge from the capital increases that took place in 2003 and 1995. In the former increase, the surcharge was ThCh\$125.881,577, and in the latter it was ThCh\$32,878.071.

The share placement surcharge generated during the capital increase in 2013, amounting to ThCh\$1,460,503 as indicated above, absorbed a portion of the share issuance and placement expenses incurred in the process (see Note 26.5.c).

At the Enersis Extraordinary Shareholders' Meeting held on November 25, 2014 a modification to the company by-laws was approved, thereby increasing the share capital by ThCh\$135,167,261. This amount corresponded to the balance on the "Share Premium account", after deducting the "Costs of Issuance and Placing Shares account" included in Other Reserves, without any distribution to shareholders as a dividend.

The company's share capital following the by-law amendment indicated above amounted to ThCh\$5,804,447,986, divided into the same number of shares as previously, ie 49,092,772,762 shares of single series nominative common stock, non-preference and with no par value.

This change of by-laws complies with Article 26 of the Chilean Companies Act (*Ley de Sociedades Anónimas*) and Circular No. 1370 issued by the SVS, as amended by Circular No. 1736, for the recognition of changes in equity as a result of recent increases in company share capital.

26.1.2 Dividends

On February 29, 2012, the Enersis Board agreed, by a unanimous vote of the Directors present, to propose at the Enersis S.A. Ordinary Shareholders' Meeting that the same percentage of profits be distributed as in the previous year, that is, 50% of the Company's net profits equivalent to Ch\$5.7497 per share, from which the interim dividend of Ch\$1.46560 per share paid in January 2012 was deducted. Therefore, the final dividend amount distributed to shareholders was Ch\$4.2841 per Company share. This was a change from the previous dividend policy, which contemplated distributing 55% of the Company's net profits in dividends.

At the Ordinary Shareholders Meeting held on April 26, 2012, it was agreed to distribute a minimum obligatory dividend (partially covered by interim dividend No. 84) and an additional dividend totaling Ch\$5.74970. Since interim dividend 84 had already been paid, the remaining Ch\$4.28410 per share was distributed and paid as final dividend No. 85.

On November 29, 2012, the Directors present at the meeting of the Board voted unanimously to distribute interim dividend No. 86 of Ch\$1.21538 per share on January 25, 2013, against fiscal year 2012 results. This corresponded to 15% of the company's net income calculated as of September 30, 2012, in accordance with the company's dividend policy at the time.

At the Ordinary Shareholders' Meeting held on April 16, 2013, it was agreed to distribute a minimum obligatory dividend (partially consisting of interim dividend No. 86) and an additional dividend, which together amounted to a total of Ch\$4.25027 per share. Since interim dividend No. 86 had already been paid, the remainder was distributed and paid in final dividend No. 87 at Ch\$3.03489 per share.

On November 26, 2013, the Directors present at the meeting of the Board voted unanimously to distribute interim dividend no. 88 of Ch\$1.42964 per share on January 31, 2014, against fiscal year 2013 results. This was 15% of the company's net income calculated on September 30, 2013, in accordance with the company's current dividend policy.

At the Ordinary Shareholders' Meeting held on April 23, 2014, it was agreed to distribute a minimum obligatory dividend (partially consisting of interim dividend no. 88 of Ch\$1.42964 per share) and an additional dividend, which together amounted to a total of Ch\$329,257,075,000, at Ch\$6.70683 per share. Since interim dividend No. 88 had already been paid, the remainder was distributed and paid in final dividend No. 89, which totaled Ch\$259,071,983,050, which is the equivalent of Ch\$5.27719 per share.

On November 25, 2014 the Board unanimously agreed to distribute interim dividend No. 90 of Ch\$0.83148 per share on January 30, 2015 against fiscal year 2014 statutory result; this corresponded to 15% of net income calculated at September 30, 2014, in accordance with the current Company dividend policy.

The following table details the dividends paid in recent years:

Dividend No.	Type of Dividend	Payment Date	Pesos per Share	Charged to
82	Interim	01-27-2011	1.57180	2010
83	Final	05-12-2011	5.87398	2010
84	Interim	01-27-2012	1.46560	2011
85	Final	05-09-2012	4.28410	2011
86	Interim	01-25-2013	1.21538	2012
87	Final	05-10-2013	3.03489	2012
88	Interim	01-31-2014	1.42964	2013
89	Final	05-16-2014	5.27719	2013
90	Interim	01-30-2015	0.83148	2014

26.2Foreign currency translation reserves

The following table details currency translation adjustments attributable to the shareholders of Enersis, in the consolidated statement of financial position as of December 31, 2014, 2013 and 2012:

Reserves for Accumulated Currency Translation Differences	12-31-2014 ThCh\$	12-31-2013 ThCh\$	12-31-2012 ThCh\$
Empresa Distribuidora Sur S.A.	(76,439,681)	(72,729,629)	(68,251,285)
Compañía Distribuidora y Comercializadora de Energía S.A.	130,582,841	154,005,545	22,285,125
Edelnor	36,743,627	16,231,253	6,517,665
Enel Brasil S.A.	(164,554,392)	(234,432,842)	(53,694,114)
Central Costanera S.A.	2,335,611	578,662	(2,677,497)
Inversiones GasAtacama Holding Ltda.	11,500,876	5,020,651	(646,559)
Emgesa S.A. E.S.P.	46,718,154	76,006,120	53,834,515
Hidroelectrica El Chocón S.A.	(30,145,604)	(26,372,986)	(19,040,997)
Generandes Perú S.A.	71,188,012	24,832,786	24,592,212
Emp. Eléctrica de Piura	7,321,905	3,379,674	-
Others	(96,475)	(2,541,250)	(3,639,124)
TOTAL	35,154,874	(56,022,016)	(40,720,059)

26.3 Capital Management

The Company's objective is to maintain an adequate level of capitalization in order to be able to secure its access to the financial markets, so as to fulfill its medium- and long-term goals while maximizing the return to its shareholders and maintaining a solid financial position.

26.4 Restrictions on subsidiaries transferring funds to the parent

Certain of the Group's subsidiaries must comply with financial ratio covenants which require them to have a minimum level of equity or other requirements that restrict the transferring of assets to Enersis. The Group's restricted net assets as of December 31, 2014 from its subsidiaries Endesa Chile, Ampla Energía, Coelce, Edelnor, and Piura totaled ThCh\$1,091,973,013, ThCh\$583,355,577, ThCh\$103,197,317, ThCh\$172,560,058 and ThCh\$27,369,928 respectively.

26.5 Other reserves

Other reserves within Equity attributable to shareholders of Enersis as of December 31, 2014 and 2013 are as follows:

	Balance at January 1, 2014 ThCh\$	2014 Changes ThCh\$	Balance at December 31, 2014 ThCh\$
Exchange differences on translation	(56,022,016)	91,176,890	35,154,874
Cash flow hedges	(3,086,726)	(66,317,951)	(69,404,677)
Available-for-sale financial assets	11,811	2,235	14,046
Other miscellaneous reserves	(2,414,023,486)	(205,947,141)	(2,619,970,627)
TOTAL	(2.473.120.417)	(181,085,967)	(2.654.206.384)

	Balance at January 1, 2013 ThCh\$	2013 Changes ThCh\$	Balance at December 31, 2013 ThCh\$
Exchange differences on translation	(40,720,059)	(15,301,957)	(56,022,016)
Cash flow hedges	27,594,028	(30,680,754)	(3,086,726)
Available-for-sale financial assets	13,647	(1,836)	11,811
Other miscellaneous reserves	(1,498,010,369)	(916,013,117)	(2,414,023,486)
TOTAL	(1,511,122,753)	(961,997,664)	(2,473,120,417)

	Balance at January 1, 2012 ThCh\$	2012 Changes ThCh\$	Balance at December 31, 2012 ThCh\$
Exchange differences on translation	176,622,668	(217,342,727)	(40,720,059)
Cash flow hedges	(310,265)	27,904,293	27,594,028
Available-for-sale financial assets	13,836	(189)	13,647
Other miscellaneous reserves	(1,497,208,996)	(801,373)	(1,498,010,369)
TOTAL	(1,320,882,757)	(190,239,996)	(1,511,122,753)

a) Reserves for foreign currency translation differences: These arise primarily from exchange differences relating to:

- Translation of the financial statements of our foreign operations from their functional currencies to our presentation currency (i.e. Chilean peso) (see Note 2.6.3); and
- Translation of goodwill arising from the acquisition of foreign operations with a functional currency other than the Chilean peso (see Note 3.c).

b) Cash flow hedging reserves: These represent the cumulative portion of gains and losses on hedging instruments deemed effective in cash flow hedges (see Note 3.g.4. and 3.m).

c) Other reserves

Changes during the fiscal year 2014 originated primarily from the Public Stock Offering of our subsidiary Coelce, the acquisition of Inkia Holdings and the capitalization of Central Dock (see Note 26.6.1, 26.6.2 and 26.6.3).

Changes in the fiscal year 2013 originated primarily from the effects of the Enersis capital increase (see Note 26.1.1).

The main items and their effects are the following:

- 1) A charge of ThCh\$897,856,109 resulting from the Enersis capital increase that took place in the first quarter of 2013 (see Note 6).
- 2) A charge of ThCh\$18,581,809 corresponding to share issuance and placement expenses calculated according to the accounting criteria described in Note 3.t). The detail of these expenses is as follows:

Description of Expense	Gross Amount ThCh\$	Tax Effect ThCh\$	Net Amount ThCh\$
Legal advising services	1,154,819	(230,964)	923,855
Financial advising services and placement fees	22,436,327	(4,487,265)	17,949,062
Audits	1,113,980	(222,796)	891,184
Other expenses	347,764	(69,553)	278,211
Sub Total	25,052,890	(5,010,578)	20,042,312
Less			
Share placement surcharge	1,460,503		1,460,503
Total	23,592,387	(5,010,578)	18,581,809

^(*) See Note 26.1.1. (by-law amendments).

The other important items included in the balance in "Other miscellaneous reserves" as of December 31, 2014 and 2013 are explained as follows:

i) In accordance with Official Bulletin No. 456 from the SVS (*Superintendencia de Valores y Seguros de Chile*), included in this line item is the monetary correction corresponding to the accumulated paid-up capital from the date of our transition to IFRS, January 1, 2004, to December 31, 2008.

Please note that, while the Company adopted the IFRS as its statutory accounting standards on January 1, 2009, the date of transition to that international standard used was the same as that used by its parent company, Endesa S.A., January 1, 2004. This results from applying the exemption for that purpose in IFRS 1, "First Time Adoption".

- ii) Foreign currency translation differences existing at the time of transition to IFRS (IFRS 1 exemption, First Time Adoption).
- iii) The effects of business combinations under common control, arising primarily from the creation of the holding company Enel Brasil in 2005 and the merger of our Colombian subsidiaries Emgesa and Betania in 2007.

26.6 Non-controlling Interests

26.6.1COELCE Public Stock Offering

On January 14, 2014, the Enersis Board of Directors voted to hold a voluntary public offering of shares in its subsidiary Companhia Energética do Ceará's (Coelce) as part of the process to make use of the funds raised in the Enersis 2013 capital increase (see Notes 5 and 26.1.1).

In the Public Stock Offering auction held on February 17, 2014, Enersis acquired 2,964,650 shares of Coelce common stock at a price of R\$49 per share, 8,818,006 shares of Class A preferred stock and 424 shares of Class B preferred stock, at a cost of ThCh\$134,248,158.

Having exceeded two-thirds of the total number of Coelce common stock shares in circulation, Enersis extended the effective date of the offer for an additional three months from the date of the auction. The process concluded on May 16, 2014, during which time Enersis acquired an additional 38,162 shares of common stock at a total price of ThCh\$464,883.

In summary, Enersis increased its equity interest in Coelce by 15.18% to control, directly and indirectly, 74.05% of that company's stock.

This purchase of non-controlling stakes was recorded using the accounting criteria indicated in Note 2.6.5. The difference between the accounting value of the non-controlling stakes acquired and the amount paid for them resulted in a charge of ThCh\$75,700,937 recorded directly in "Other reserves" in "Net equity attributable to the shareholders of Enersis".

In addition, the components of "Other comprehensive income" have been redistributed accordingly, with an additional charge to "Other miscellaneous reserves" and a credit to "Reserves for exchange differences on translation" amounting to ThCh\$28.385.172.

26.6.2Acquisition of Inkia Holdings (Acter) Limited (Generandes Perú)

On April 29, 2014, the Board of Enersis authorized the signing of a purchase agreement for the acquisition of all the shares that Inkia Americas Holdings Limited held indirectly in Generandes Perú (39.01% of that company), which is the holding company for Edegel S.A.A. This purchase formed part of the process to use funds that had been raised in the Enersis capital increase in 2013 (See Notes 6 and 26.1.1).

On September 3, 2014, Enersis confirmed and paid ThCh\$253,012,511 to Inkia, and consolidated the companies Inkia Holdings (Acter) Limited, Southern Cone Power Ltd., Latin American Holding I Ltd., Latin American holding II Ltd. and Southern Cone Power Peru S.A.A.

This transaction increased Enersis's indirect stake in Edegel S.A.A by 21.14%, leaving Enersis with direct and indirect control of 58.60% of the shares in this company.

The acquisition of non-controlling interests was recorded according to the accounting policy described in Note 2.6.5. The difference between the book value of non-controlling interests acquired and the amount paid for them, resulted in a charge of ThCh\$137,644,766 which is directly reflected in "Other reserves in equity attributable to the shareholders of Enersis".

Additionally, the corresponding components of "Other comprehensive income" have been redistributed. Accordingly, there has been an additional charge to "Other miscellaneous reserves" and a credit to "Reserve for Exchange Differences in Translation" of ThCh\$32,862,564.

26.6.3 Capitalization of Central Dock Sud

During 2014, Enersis and the rest of Central Dock Sud's (CDS) shareholders worked to find a solution to the statutory negative equity situation that CDS was facing since December 2013. If the negative worth situation was not corrected, the company would have to be dissolved according to Argentine regulation.

On December 1, 2014 Enersis S.A. bought to Endesa Latinoamérica S.A. a loan granted to Central Dock Sud S.A. (CDS), with a face value of US\$ 106 million. The amount paid was US\$29 million. These loans were then converted to Argentine pesos and interests were condoned. The remaining portion of these loans was contributed by Enersis S.A. to the share capital of Inversora Dock Sud (IDS) and subsequently to CDS, at face value. Similar contribution was made by each of the other shareholders, capitalizing their credits lent to CDS. In exchange, shares were issued by IDS and CDS, respectively, in proportion to the loans contributed or cash capitalized, and in the case of Enersis, these loans were partially repaid in cash. All of these movements constitute a related party transaction (the "Transaction"), approved in the case of Enersis, at an Extraordinary Shareholders Meeting.

The Transaction restored the equity of CDS, whilst maintaining substantially the same proportion of shareholdings in this company as held prior to the Transaction: Enersis (40%), YPF (40%) and Pan American Energy (20%).

This Transaction was recorded under the accounting policy described in Note 2.6.6 and resulted in an additional credit to "Other miscellaneous reserves" of ThCh\$35,149,573.

26.6.4 The detail of non-controlling interests

		Non-controlling Financial Interests						
		Eq	uity		Profit (Loss)			
Companies	12-31-2014	12-31-2014	12-31-2013	12-31-2014	12-31-2013	12-31-2012

- (2) On May 1, 2012, Empresa Eléctrica Pangue S.A. was merged with Compañía Eléctrica San Isidro S.A. On September 1, 2013, Compañía Eléctrica San Isidro S.A. was merged with Endesa Eco S.A., and on November 1, 2013, Endesa Eco was merged with Compañía Eléctrica Tarapacá S.A. It is the latter company that legally continues to exist.
- (3) On November 21, 2013, Investluz S.A. and Ampla Investimentos S.A. were merged with Enel Brasil S.A. It is the latter company that legally continues to exist.

27. REVENUE AND OTHER INCOME

The detail of revenues presented in the statement of comprehensive income as of December 31, 2014, 2013 and 2012 is as follows:

	Balance at				
Revenues	12-31-2014	12-31-2013	12-31-2012		
	ThCh\$	ThCh\$	ThCh\$		
Energy sales	6,236,134,845	5,168,220,551	5,725,898,591

(1) For the year ended December 31, 2014, with the application of Resolution 250/13, the Cost Monitoring Mechanism (MMC) adjustment for recognizing costs that are not passed on to electricity tariffs, our subsidiary Edesur has recorded income of ThCh\$144,347,336 related to the periods from October 2013 to Diciembre 2014. At December 31, 2013, ThCh\$250,533,319 was recorded to reflect this adjustment related to the periods from May 2007 to February 2013 and from March 2013 to Sep tember 2013.

Also included is ThCh\$39,282,571 at December 31, 2014 (ThCh\$31,262,764 at December 31, 2013) from new availability contracts as of December 2012 between our subsidiary Central Costanera S.A. and CAMMESA.

28. RAW MATERIALS AND CONSUMABLES USED

The detail of raw materials and consumables used presented in profit or loss for the periods ended December 31, 2014, 2013 and 2012 is as follows:

	Balance at					
Raw Materials and Consumables Used	Raw Materials and Consumables Used 12-31-2014 ThCh\$		12-31-2012 ThCh\$			
Energy purchases	(2,612,423,439)	(1,820,613,559)	(1,848,670,310)

Foreign currency exchange differences (**)	(38,821,872)	(30,373,115)	(16,126,401)		
Total financial costs	(529,046,602)	(428,155,504)	(448,772,207)		
Total financial results	(263,162,325)	(168,028,958)	(216,642,227)		

- (1) As of December 31, 2014, this item includes a net financial cost of ThCh\$68,728,638 from the financial updating of non-amortized assets at their new replacement value at the end of the concession in the distribution companies Ampla and Coelce. As of December 31, 2013, this financial updating generated financial income of ThCh\$54,591,750 and ThCh\$112,274,835 as of December 31, 2012 (See Note 8).
- (2) On December 31, 2014 our subsidiary Endesa Costanera was forgiven interest owed to Mitsubish and the present value of the Mitsubishi debt amounting to ThCh\$84,534,955, under a restructuring agreement for this debt. The main conditions of the restructuring agreement include: the forgiveness of interest due and accrued as of September 30, 2014; the rescheduling of capital repayments over a period of 18 years, with a 12 month grace period so that obligations must be fully repaid before December 15, 2032; a minimum annual payment of US\$3,000,000 in principal in quarterly installments at an interest rate of 0.25% per annum; the maintenance of a pledge over assets and the fixing of restrictions on the payment of dividends.

The effects on financial results from exchange differences and the application of indexed assets and liabilities originated from the following:

Income tax benefit (expense), continuing operations	(36.61%)	(558,644,595)	(31.17%)	(504,167,785)	(34.30%)	(406,675,920)

^(*) The principal temporary differences are detailed in Note 19a.

35. INFORMATION BY SEGMENT

35.1 Basis of segmentation criteria

The Group's activities are organized primarily around its core businesses: electric energy generation, transmission and distribution. On that basis, the Group has established two major business lines.

Considering presents the differentiated information that is analyzed by the Company's chief operating decision maker, segment information has been organized by the geographical areas in which the Group operates:

- Chile
- Argentina
- Brazil
- Peru
- Colombia

Given that the Group's corporate organization basically matches its business organization and, therefore, the segments, the following information is based on the financial information of the companies forming each segment. The accounting policies used to determine the segment information are the same as those used in the preparation of thhe Group's consolidated financial statements.

The following tables present details of this information by segment:

35.2 Generation and transmission, distribution and others

2,338,910,608	2,077,242,699	-	1			-		Non-controlling interests

As of December 31, 2014, Enersis S.A. had future energy purchase commitments amounting to ThCh\$33,344,231,316 (ThCh\$20,390,857,446 at December 31, 2013).

36.2 Indirect guarantees

36.3 Lawsuits and Arbitrations Proceedings

As of the date of these Consolidated Financial Statements, the most relevant litigation involving Enersis and its subsidiaries are as follows:

- 1.- Law 25,561 on Public Emergency and Reform to the Currency System, enacted on January 6, 2002 by the Argentine authorities, voided certain provisions of the concession agreement of Enersis' subsidiary Edesur. Law 25,561 also required that utility concession agreements be renegotiated within a reasonable timeframe to adjust them to the new conditions. However, the failure to renegotiate Edesur's concession agreement prompted Enersis S.A., Chilectra S.A., Endesa Chile and Elesur S.A. (now Chilectra S.A.) (collectively, the "Claimants") to file an arbitration petition in 2003 under the Treaty for the Promotion and Protection of Chilean-Argentine Investments before the International Center for Settlement of Investment Disputes (ICSID). The statement of claim principally requested that the ICSID declare the investment expropiated for an amount of US\$ 1,306,875,960 (approximately ThCh\$ 792,946,989), and seeking for the damages caused to the investment due to lack of fair and equitable treatment, in the amount of US\$ 318,780,600. The Claimants also seek, with respect to both claims, compounded annual interest of 6.9% per annum. The Claimants also claimed the sums resulting from the damages caused as from July 1, 2004. Finally, the Claimants also demanded US\$ 102,164,683 for Elesur S.A. (now Chilectra S.A.) due to a lower price received on the sale of its shares. In 2005, the Argentine authorities and Edesur signed a Letter of Understanding, in which the terms and conditions are established for amendments and supplements to the Concession Agreement, forecasting tariff modifications, first during a transitional period and then under a Integral Tariff Review, in which the conditions for an ordinary tariff period of 5 years will be set. The arbitration has been suspended since March 2006 in accordance with the terms of the Letter of Understanding, and the appointment of one of the arbitrators, to replace an arbitrator who resigned in 2010 has been suspended. As of December 31, 2014, the parties informed ICSID of their agreement to extend the suspension of the arbitration procedure for 12 months starting on the same date, informing also that any of the parties can request the renewal of the arbitration procedure with 30 calendar days prior notice.
- 2.- In Brazil, Basilus S/A Serviços, Empreendimentos e Participações (successor to Meridional S/A Serviços, Empreendimentos e Participações from 2008) is the holder of the litigation rights that it acquired from the construction companies Mistral and CIVEL, which had a civil works contract with Centrais Elétricas Fluminense S.A. (CELF). This contract was terminated before CELF's privatization process. Since CELF's assets were transferred to Ampla during the privatization process, Basilus (previously Meridional) sued Ampla in 1998, contending that the transfer of the referred assets was done in detriment of its rights. Ampla only acquired assets from CELF, but is not its legal successor since CELF, a state-owned company, still exits and maintains its legal personality. Basilus demanded payment of pending invoices and contractual penalties for termination of the civil works contract. In March 2009, the court decided in favor of Basilus, and Ampla and the State of Rio de Janeiro filed the corresponding appeals. On December 15, 2009, the State Court accepted the appeal and overturned the lower court's decision obtained by Basilus, in Ampla's favor. Basilus filed an appeal against the resolution, which was denied. In July 2010, Basilus filed an Appeal under Specific Court Regulations (Agravo Regimental) before the Superior Court of Justice of Brazil, which also rejected the appeal in August 2010. In order to overturn such decision, Basilus filed a Petition for Writ of Mandamus (Mandado de Seguranca), which was also rejected. In June 2011, Basilus filed an Appeal to Amendment of Judgment (Embargos de Declaração) in order to clarify a supposed omission by the Superior Court of Justice in the decision on the Petition of Writ of Mandamus, which was not accepted by the court. Against this decision, Basilus filed an Ordinary Appeal (Recurso Ordinario) before the Superior Court of Justice (in Brasilia). On March 28, 2012 the Reporting Justice decided the Ordinary Appeal in favor of Basilus. Ampla and the State of Rio de Janeiro filed an Appeal under Specific Court Regulations against the Reporting Justice's decision, which was accepted by the First Court Room of the Superior Court of Justice on August 28, 2012, determining that the Ordinary Appeal of the Petition of Writ of Mandamus must be submitted to the decision by an en banc session and not by a single Reporting Justice. Basilus challenged the decision. The decision of August 28, 2012 was published on December 10, 2012, once the Appeal to Admendment of Judgment had been filed by Ampla and the State of Rio de Janeiro to remedy the existing error in its publication, in order to avoid future divergence. Basilus filed its response and on May 27, 2013, the Appeal to Admendment of Judgment filed by Ampla and the State of Rio de Janeiro were accepted and the error corrected. Consequently, the proceeding is in its second legal instance with a decision favorable to Ampla and there are pending proceedings before the Superior Court of Law. The amount involved in this proceeding is estimated to be approximately R\$ 1,096 million (approximately ThCh\$ 250,359,280).

- 3.- The Trade Union of Niterói, representing 2,841 employees, filed a labor claim against Ampla, requesting the payment of salary differences of 26.05% starting from February 1989, pursuant to the Economic Plan instituted by Law Decree No.2,335/87. In the court of first instance, the decision was partially unfavorable for Ampla. The court ordered payment of the salary differences requested retroactive to February 1, 1989, and legal fees of 15% of such amount. Ampla filed several appeals, among them an Extraordinary Appeal which is currently pending. A mandatory mediation was unsuccessful. In parallel, Ampla has filed a motion for Advanced Dismissal of Enforcement (Exceção de Pré-Executividade) based on the jurisprudence of the Federal Supreme Court, which has previously declared the non-existence of a right acquired on the URP readjustment of Law Decree No.2,235/87. In addition, Ampla alleged the exception of the payment for these readjustments and, alternatively, requested the limitation of this readjustment using October 1989 salaries as a baseline. In the court of first instance, Ampla obtained the declaration of unenforceability of legal title, against which it filed an appeal (Agravo de Petição). The decision was partly favorable regarding the exception of payment, but not regarding the limitation of the salary differences, using October 1989 salaries as a baseline. On September 10, 2014, the court rejected the Special Appeal (Agravo de Instrumento) presented by both parties, who filed a Petition for Clarification of the Decision (Embargos de Aclaración) against this judgment. The amount involved in this proceeding is estimated to be approximately R\$ 57 million (approximately ThCh\$ 13,020,510).
- 4.- Companhia Brasileira de Antibióticos (Cibran) filed suit against Ampla in order to receive compensation for the loss of products and raw materials, machinery breakdown, among other things, that occurred as a consequence of poor service provided by Ampla between 1987 and May 1994, and compensation for moral damages. This litigation is related to other five actions filed by Cibran against Ampla based on power outages allegedly caused by Ampla in the period from 1987 to 1994, 1994 to 1999 and part of 2002. The judge decided to conduct a single expert assessment for these various claims, which was in part adverse to Ampla. Ampla challenged such assessment and requested a new expert assessment. On September 5, 2013, the judge rejected the prior petition, whereupon Ampla filed a Petition for Clarification of the Decision (Embargo de Aclaración) and subsequently a Special Appeal (Agravo de Instrumento), both of which were rejected by the court. Against the latter, Ampla filed a Special Appeal before the Superior Court of Justice, which is pending review. In September 2014, a first instance judgment in one of these proceedings, ordered to Ampla to pay compensation of R\$ 200,000 (approximately ThCh\$ 48,896) for moral damages, in addition to the payment of material damages caused due to failures in supply of service, which have to be assessed by an expert in the sentence execution stage. Ampla filed a Clarification Attachment against this ruling that was rejected. In December 2014, Ampla filed an appeal, currently pending decision. In the remaining proceedings, a first instance ruling is pending. The amount involved for all these cases is estimated to be approximately R\$166 million (approximately ThCh\$ 37,919,380).
- 5.- In December 2001, the Brazilian Federal Constitution was amended to apply the CONFINS tax (Contribuicao para o Financiamento da Seguridade Social), a tax levied on revenues, to electricity energy sales. The Constitution states that the changes on social contributions are effective 90 days after their publication, which is the reason why Ampla started to pay this COFINS tax in April 2002. However, the Brazilian Internal Revenue Service notified Ampla that the 90-day of entry into force is applied to statutory amendments, but are not applicable to constitutional amendments, which are effective immediately. In November 2007, the appeal filed with the Taxpayers Council (Consejo de Contribuyentes), the administrative appeals level, ruled against Ampla. In October 2008, Ampla filed a special appeal that was denied. On December 30, 2013, Ampla was notified of the decision to reject its position that the COFINS tax payments were not due for the period from December 2001 to March 2002 since the Constitution states that legislative changes are effective 90 days after their publication. Ampla filed a judicial proceeding to obtain a certification of fiscal good standing in order to continue receiving public funds and was required to post a bond for the tax debt . Under the new standard on surety bonds published in March 2014, the bond amount must be 120% rather than the previous 130%, of the tax debt and the bond was reduced to €44 million. Ampla submitted the new surety bond, complying with the new requirements. The Brazilian Treasury accepted the surety bond and granted the certification of fiscal good standing. The Brazilian Treasury submitted the fiscal execution and Ampla opposed its defense in July 2014. It is not necessary to submit a new surety bond since the bond posted to obtain the certification of fiscal good standing can be used for this proceeding. The amount involved in this case is estimated to be approximately R\$ 142 million (approximately ThCh\$ 32,437,060).

- 6.- In August 1996, Ampla obtained a favorable ruling granting it an exemption from paying the COFINS tax for the period prior to the 2001 amendment of the Brazilian Federal Constitution which expressly made electric power operations subject to the COFINS tax. Following the definite decision in favor of Ampla issued in 2010, the Brazilian Public Treasury attempted to overturn the 1996 decision favorable to Ampla through a rescession action. Ampla refiled a suit originally filed in 1996 seeking a refund of its COFINS tax payments from April 1992 to June 1996, based on the favorable ruling in the first lawsuit described obove. The suit seeking a refund of the COFINS tax had been suspended pending the resolution of the first lawsuit above. In June 2013, Ampla received a favorable decision entitling it to a refund of its COFINS tax payments for the periods requested. The Brazilian Public Treasury appealed the decision. In October 2014, the Court of the State of Río de Janeiro ordered a new trial since it considered that the Brazilian Public Treasury did not have the opportunity to manifest in the prior decision judgment. A new first instance judgment is expected. The sum Ampla has requested as a tax refund amounts to R\$ 161 million (approximately ThCh\$ 36,777,230).
- 7.- In order to fund the purchase of Coelce in 1998, Ampla issued long-term debt abroad through securities called Fixed Rate Notes (FRNs) which were governed by a special tax regime whereby interest payments received by non-resident holders were exempt from taxation in Brazil, as long as the debt was issued with a minimum maturity of 8 years. In 2005, the Brazilian Internal Revenue Service notified Ampla the special tax regime did not apply based on its understanding that prepayments were made before the state maturity, due to the fact that Ampla had received financing in Brazil which was allocated to the FRN holders. Ampla believes that these two transactions are independent and legally valid. The non-application of the special tax regime means that Ampla would have failed to comply with its obligation to retain the tax and to record it as interest payments made to nonresident holders. The tax resolution was appealed and in 2007 the Taxpayers Council (Consejo de Contribuyentes), the administrative appeals level annulled it. However, the Brazilian Internal Revenue Service (responsible for tax collection and compliance with tax laws) contested this decision before the Superior Chamber of Fiscal Resources (Cámara Superior de Recursos Fiscales), the final administrative appeals level, and on November 6, 2012, it ruled against Ampla. The decision was notified to Ampla on December 21, 2012. On December 28, 2012, Ampla filed a Petition for Clarification of the Decision (Embargo de Aclaración) before the Superior Chamber of Fiscal Resources in order to obtain a final resolution regarding contradictory points of the decision and to incorporate in it the relevant defense arguments that were omitted. On October 15, 2013, Ampla was informed of the decision to deny the Petition for Clarification of the Decision filed on December 28, 2012. As a consequence, Ampla filed a judicial proceeding to obtain a certification of fiscal good standing in order to continue receiving public funds. Ampla was required to post a bond for the tax debt. Under the new standard on surety bonds published in March 2014, the bond amount must increased in 20%, rather than the previous 30%, of the tax debt and the bond was reduced to €331 million. Ampla submitted the new surety bond, complying with the new requirements. The Brazilian Treasury accepted the surety bond and granted the certification of fiscal good standing. The Brazilian Treasury submitted the fiscal execution and Ampla opposed its defense on June 27, 2014. It is not necessary to submit a new surety bond since the bond posted to obtain the certification of fiscal good standing can be used for this proceeding. It is important to mention that the final unfavorable decision of the Superior Chamber of Fiscal Resources could lead to a possible criminal proceeding against some employees and managers of Ampla. The amount involved in this case is estimated to be approximately R\$ 1,068 million (approximately ThCh\$ 243,963,240).
- 8.- Coelce bills the "low income" consumer with a social discount that determines a final rate called of "baja renta" (low income). The State compensates Coelce for this discount as a state subsidy. The ICMS (a tax similar to the Chilean Value Added Tax) is transferred (deducted) by Coelce over the amount of the normal rate (without the discount). On the other hand, the State of Ceará establishes that the ICMS does not apply to billings that fluctuate between 0 and 140 kW/h. On the other hand, Coelce, in order to calculate the ICMS deducible amount in reference to the total ICMS supported in energy purchases must apply the "pro rata" rule. The rule states that the percentage that represents revenues subject to ICMS over the total income (whether or not subject to ICMS). Coelce considers, for the purpose of its inclusion in the pro rata denominator, that the revenue not subject to ICM is the result of applying the end sales price of energy (price after the subsidy is discounted) and the Brazilian Internal Revenue Service holds that the income not subject to ICMS is the price of the normal rate (without discounting the subsidy). The Brazilian IRS's position implies a lower ICMS

deduction percentage. The Brazilian Treasury view is that the "ICMS pro rata" calculation should be based on the normal rate value in "low income" energy sales cases, instead of the reduced rate that Coelce uses. The Brazilian Treasury criteria results in a greater ICMS non-recoverable percentage, which results in a higher ICMS payable. Coelce holds that its calculation is correct, since it must be used in the "ICMS Pro Rata" calculation, reducing the value of the ICMS rate since that is the accurate value of the energy sales transaction (the ICMS's base is the transaction value of the merchandise sold). In reference to the 2005 litigation, after the unfavorable decision in the administrative process, Coelce is waiting for the filing of the State's judicial execution. However, Coelce has already presented the banking guarantee in order to assure its right its fiscal regulation certification right. In reference to the 2006, 2007, 2008 and 2009 litigation, Coelce filed the administration defense. The next process is to continue with the defense of judicial and administrative processes. The amount of these claims is R\$ 103 million (approximately ThCh\$ 23,528,290).

9.- In 2002, the State of Rio de Janeiro issued a decree stating that the ICMS (a tax similar to the Chilean Value Added Tax) should be paid and filed on the 10th, 20th and 30th days of the same month of the tax accrual. Ampla continued paying ICMS in accordance with the previous system (fiing within five days after the end of the month of its accrual) and did not adopt the new system between September 2002 and February 2005 due to cash flow issues. Additionally, Ampla filed a lawsuit to dispute the constitutionality of the new filing requirement. These lawsuits were unsuccessful, and Ampla has filed suit alleging constitutional violations with the Brazilian Supreme Federal Tribune. Since March 2005, Ampla has been paying the ICMS according to the new system. In September 2005, the IRF notified to Ampla of fines and interest due to the delay in filling the ICMS as set forth in the aforementioned decree of 2002. Ampla appealed the resolution before the Administrative Courts, based on the fiscal Amnesty Laws of the State of Río de Janeiro published in 2004 and 2005 (foregiving interest and penalties if the taxpayer paid the taxes due). Ampla alleges that if the aforementioned tax amnesties are found to be inapplicable to it, the law would punish taxpayers that are delayed only a few days in their tax payments (as in the case of Ampla) more harshly than those who failed to pay their taxes and later formally adopted the various tax amnesties and thus, regulate their tax situation through the filing of overdue unpaid taxes.

On May 9, 2012, The "En Banc Council" (a special body within the Taxpayers Council, representing the last administrative instance) issued a judgment against Ampla. The decision was notified on August 29, 2012. Ampla appealed to the State Public Treasury (Hacienda Pública Estadual) using a special review procedure based on the equity principle, before the Governor of the State of Río de Janeiro. The appeal has not been resolved and, therefore, the tax should be suspended. However, the State of Río de Janeiro recorded the tax due in the Public Register as if demandable and, therefore, Ampla was obliged to post, on November 12, 2012, a surety bond in the amount of € 101 million (R\$ 293 million) in order to receive a certification of fiscal good standing to continue receiving public funds. On June 4, 2013, in a decision of second instance, the State Public Treasury obtained a ruling against Ampla's surety bond. In September 2013, Ampla filed a letter of guarantee to substitute for the surety bond rejected by the court. However, Ampla reiterated to the attorney of the State, the petition of review, which is still pending decision. Despite this, the State Public Treasury submitted the fiscal execution and Ampla opposed its defense. It is not necessary to submit a new surety bond since the bond posted to obtain the certification of fiscal good standing can be used for this proceeding. The amount involved in this proceeding is R\$ 269 million (approximately ThCh\$ 61,447,670).

10.- In 1982 and under the framework of an electricity supply network expansion in Brazilian rural areas, which was financed principally by international development banks (IDBs), the then-state-owned Companhia Energética do Ceará S.A. (Coelce) executed contracts with 13 cooperatives at the request of the Brazilian government and the IDBs to implement this project. Under the contracts, Coelce operated and maintained the assets and paid a monthly fee, which was adjusted for inflation. These contracts were of indefinite length and failed to clearly identify the networks that were under their scope due the public nature of Coelce and the fact that they were often amended, creating a confusion between the assets that were operated and maintained by Coelce, and the assets that were owned by it. After 13 years of regular performance of the lease by making payments adjusted for inflation, in 1995 Coelce started making payments without adjustment, and continued to do so after its privatization in 1998. In view of the foregoing, some of these cooperatives have filed claims against Coelce for the payment of the adjustment for inflation. Coelce's defense is basically grounded on the argument that the adjustment is not applicable, since the assets lacked value due to their very extended useful lives, taking into consideration their depreciation; or, alternatively, if the assets were deemed to have any value, that said value would be very low since Coelce performed their replacement, extension and maintenance. The amount involved in this litigation is approximately R\$ 161,742,815 (approximately ThCh\$ 36,946,911).

One of the plaintiffs in this litigation, Cooperativa de Eletrificação Rural do V do Acarau Ltda (Coperva), filed a review action requesting expert evaluation of the issue. Once the expert report was delivered, Coelce claimed there were technical inconsistencies therein and requested a new evaluation to be conducted, but the court ruled the "anticipated execution of the decision", which entails the preliminary determination of the adjusted monthly payments Coelce should have made and ordering the immediate payment of the difference between such adjusted values and the values Coelce actually paid. An appeal has been filed and a precautionary measure has been obtained in favor of Coelce, staying the anticipated execution of the decision. On April 4, 2014 a court of first instance denied Coperva's claims. Coperva has appealed the decision. Coperva filed a appeal which is pending decision. Another plaintiff in the ligation, filed a review action in 2007, through which Coperva is attempting to readjust the lease value of its distribution lines (in the central region of the State of Ceará), to be calculated at 1% of the value of the asset leased, estimated by Coperca to be at R\$ 15.6 million (approximately ThCh\$ 3,563,508). This proceeding is in a first instanceand has not yet started the evidence presenting stage. The amount involved in this proceeding is estimated to be R\$ 87,843,275 (approximately ThCh\$ 20,066,039). In Coerce's case, the review action was filed in 2006 and Coelce is attempting to readjust the lease value of its distribution lines (in the central region of the State of Ceará), to be calculated at 2% of the value of the asset leased. The amount involved in this proceeding is R\$ 101,127,109 (approximately ThCh\$ 23,100,466). This proceeding, as well as the one for Coperva, has not been actively promoted by the plaintiff and is in its first instance.

- 11.- In October 2009, Tractebel Energía S.A. sued CIEN claiming an alleged breach of the contract "Purchase & Sale Agreement for 300 MW of Firm Capacity with related energy originating from Argentina" signed in 1999 between CIEN and Centrais Geradoras do Sul do Brasil S.A (which is now known as Tractebel Energía). Tractebel Energía asked the court to order CIEN to pay a rescission penalty of R\$ 117,666,976 (approximately ThCh\$ 26,878,667) plus other fines due to the unavailability of energy. The breach allegedly occurred due to a failure by CIEN to ensure sufficient capacity as contracted with Tractebel Energía during the 20-year period, which allegedly took place beginning in March 2005. In May 2010, Tractebel Energía notified CIEN via a written statement, but not judicially, its intention to exercise step-in rights of Line I (30%). The proceeding is currently at the first instance. CIEN petitioned to join this proceeding with the lawsuit filed by it against Tractebel Energía in 2001, which involves a dispute relative to exchange rates and taxing issues. The petition to join both proceedings was rejected by the court. Subsequently, CIEN filed a request to suspend the proceeding for 180 days in order to avoid potentially divergent decisions. The court ordered the suspension of proceedings for one year pending the outcome of the other lawsuit of CIEN against Tractebel Energía.
- 12.- In 2010, Furnas Centrais Eletricas S.A. filed a suit against CIEN, based on CIEN's alleged breach of the contract "Firm Capacity Purchase with Related Energy for the purchase of 700 MW of firm capacity with related energy originating from Argentina", which was signed in 1998 with a term of 20 years beginning in June 2000. In its lawsuit, Furnas requested a compensation of R\$ 520,800,659 (approximately ThCh\$ 118,966,495) corresponding to a rescission penalty included in the contract, plus adjustments and delinquent interests, from the date of filing of the claim until actual payment. Furnas also requested for additional penalties based on the lack of availability of the "firm power and related energy" and for other damages to be determined upon the final decision. The first trial judgment denied the claims of Furnas for CIEN's responsibility for breach of its contractual obligations. The Court recognized the existence of *force majeure* because of the energy crisis in Argentina. Regarding the foreign language documents presented by CIEN, the judge of first instance determined that those documents would be excluded from the lawsuit, which decision was confirmed by the 12th Civil Section of the State Court. CIEN has filed a Special Appeal (Recurso Especial) against this decision, which will be decided by the Superior Court of Justice. In addition to the foregoing, CIEN received a notice from Furnas, not at the judicial headquarters, indicating that in case of rescission due to CIEN's breach, Furnas would have the right to acquire 70% of Line I.
- 13.- At the end of 2002, Fortaleza filed an action against the Brazilian federal government in order to obtain a ruling that considered imported goods for the turbo-generating units to be qualified as "Other Power Generating Units" under the applicable tax legislation, which would be entitled to a 0% rate of import tax (II) and industrialized products tax(IPI). Fortaleza obtained a preliminary favorable ruling in the principal proceeding

which allows it to import goods at a 0% rate, provided it deposited the applicable taxes as a bond in the event of a final adverse ruling. To date, Fortaleza has obtained favorable rulings in an administrative proceeding and from the Superior Court of Justice (Brasilia), for its principal proceeding. In 2002, Fortaleza filed an action due to the tax increase from 0% to 14% applicable to the importation of generator. In this proceeding, Fortaleza obtained a favorable decision in the first and second instances. The Brazilian Treasury re-filed a proceeding and Fortaleza obtained a favorable ruling, which will allow it to recover the $\[mathbb{c}\]$ 27 million (approximately ThCh $\[mathbb{c}\]$ 20,347,991) bond. In December 2014, Fortaleza recovered $\[mathbb{c}\]$ 25.3 million (approximately ThCh $\[mathbb{c}\]$ 1.7 million (approximately ThCh $\[mathbb{c}\]$ 685,290) of the bond is pending of recovery.

- 14.- In February 2007, the Brazilian tax authorities audited Fortaleza regarding the payment of PIS/COFINS tax during December 2003 and from February 2004 to November 2004. The audit resulted in a claim alleging differences between the amounts stated in Fortaleza's annual tax return (where the PIS/COFINS tax amounts were reported under the new non-accrued regime) and the amounts stated in monthly tax returns (where the amounts due were reported under an older accrual system). On appeal, the Taxpayer's Council confirmed the validity of the compensations of credits resulting from the regime change of PIS/COFINS. The Brazilian Treasury can file a Special Appeal before the Superior Chamber of Fiscal Resources (Cámara Superior de Recursos Fiscales). The amount involved in this proceeding is R\$ 85 million (approximately ThCh\$ 19,416,550).
- 15.- The Brazilian Internal Revenue Service claims an alleged underreporting of dividends by Endesa Brasil, now called Enel Brasil, than it reported. The Brazilian IRS claims that the total amortization of goodwill (greater value) recorded by Enel Brasil in 2009 in the equity accounts, should have been recorded in the comprehensive income accounts. As a result, the procedure performed was inadequate and a greater profit would have been generated and consequently, a higher amount of dividends distributed. The alleged surplus in dividends was interpreted by the Brazilian IRS as payments to non-residents, which would be subject to a 15% income tax retained at the source. Enel Brasil responded states that all the procedures adopted by Enel Brasil were based on the company's interpretation and in accordance with Brazilian accounting standards (Brazilian GAAP), and confirmed by the external auditors and by a legal opinion from Souza Leão Advogados. Enel Brasil has filed its defense in the administrative first instance and is waiting for an administrative first instance ruling. This contingency has not been provisioned. The amount involved in this proceeding is R\$ 212 million (approximately ThCh\$ 48,427,160).
- 16.- In 2001, a lawsuit was filed against Endesa Chile's Colombian generation subsidiary Emgesa S.A. E.S.P., as well as the non-related companies, Empresa de Energía de Bogotá S.A. E.S.P. (EEB) and Corporación Autónoma Regional de Cundinamarca (CAR), by the residents of Sibaté, in the Colombian Department of Cundinamarca. This lawsuit seeks to hold the defendants jointly liable for the damages and prejudices derived from the pollution to the El Muña reservoir, resulting from the pumping of polluted waters from the Bogotá River by Emgesa. Emgesa has denied these allegations arguing, among others, that it does not have any responsibility since it receives the waters already contaminated. The plaintiffs' initial demand was for approximately CPs 3,000 billion (approximately ThCh\$ 750,000,000). Emgesa filed a motion for the joinder of numerous public and private entities that dump into the waters of the Bogotá River or that in any way are responsible for the environmental stewardship of the river basin. The Third Section of the State Council has received the petition and ordered certain companies joined as defendants. In January 2013, several of the defendants filed responses to the complaint. In June 2013, a motion to terminate the proceedings was denied. The resolving preliminary objections and the summons to a conciliation hearing are currently pending.
- 17.- CAR in Colombia, through Resolution 506, enacted on March 28, 2005 and Resolution 1189, enacted on July 8, 2005, imposed on Emgesa, EEB and Empresa de Acueducto y Alcantarillado de Bogotá (EAAB) the execution of construction work in the El Muña reservoir, whose effectiveness, among others things, depends on maintaining Emgesa's water concession. Emgesa filed a proceeding of nullity and reestablishment of rights against these resolutions before the Administrative Court of Law of Cundinamarca, Section One, in order to annul them. The first instance court denied the nullity of the abovementioned resolutions. Appeals were filed by Emgesa, EEB and EAAB, which are pending ruling. The amount at issue is undetermined.

- 18.- In Colombia, upon creating an electrical distribution subsidiary, Codensa, in 1997, EEB contributed all public lighting infrastructures and other sale and distribution assets to Codensa in exchange for 51.5% of Codensa's shares. However, there was no absolute clarity regarding the inventory of lights in the city and this generated subsequently differences regarding invoicing and settlement of the energy value that Codensa supplied to the municipality. In 2005, a geo-reference inventory of the lights was performed, which resulted in 8,661 fewer lights than those that Codensa considered in its billing and settlement to the Federal District of Bogotá (the District). In order to solve the conflict, the Parties carried out round-table discussion to come to an agreement. However, in 2009 a private citizen filed a derivative action in which he requests that the court of law: (i) declare the rights of the administrative morality and public property violated; (ii) order Codensa to carry out the settlement that includes delinquent interest due to the higher values paid between 1998 and 2004; and (iii) recognize the incentive due to administrative morality for the claimant (15% of the amount the District recovered). The first instance judgment, confirmed by the second instance judgment, ordered the Administrative Special Public Utilities Unit (the UAESP) and Codensa to, within a time period of two months starting from the date of issuance of the judgment, carry out all necessary negotiations to establish in a definitive manner the balances either in favor or against Codensa, duly adjusted, plus additional interest. If no agreement is reached, the UAESP itself may perform within the unilateral judgment within two months and deliver it to Codensa for its consideration. Codensa may also exercise remedies through the relevant government channels and, in the event of non-payment, must proceed to execute the judgment. On September 6, 2013, the Comptroller sent a communication to Codensa announcing future control actions against the company and the UAESP for an alleged detriment to the District of CPs 95,142,786,544 approximately ThCh\$ 23,785,696, due to payments owed to the District for public lighting between 1998 and 2004. On September 20, 2013, CODENSA responded, disagreeing with the amount and proposing a technical group to resolve the issue. This resulted in several meetings being held. Based on Codensa's documents and the declarations presented, the Comptroller issued a new report that supports the figure obtained by common accord by UAESP and Codensa. The Comptroller recommended in its report that UAESP send the agreement for judicial review in order to resolve the lawsuit with Codensa. Currently, the decision on this agreement signed between Codensa and UAESP by the Tenth Administrative Court of Law of the Circuit is pending.
- 19.- A class action lawsuit has been filed by residents of the Colombian Municipality of Garzón, alleging that the construction of the El Quimbo hydroelectric project has caused the plaintiffs' income from handicrafts or entrepreneurial activities to decrease by an average of 30%. The lawsuit claims the decrease was not considered when the project's social-economic impact report was drafted. Emgesa has denied these allegations on the basis that (i) the social-economic impact report complied with all methodological criteria, including giving all interested parties the opportunity to be registered in the report, (ii) the plaintiffs are not residents and therefore, compensation is allowed only for those whose revenues are, in their majority, coming from of their activity in the direct area of influence of the El Quimbo hydroelectric project and (iii) compensation must not go beyond the "first link" of the production chain and must be based on the status of the income indicators of each affected person. A proceeding was filed in parallel by 38 inhabitants of the Municipality of Garzón, who are claiming compensation for being affected by the El Quimbo hydroelectric project since they were not included in the social-economic impact report. A mandatory settlement hearing was unsuccessful. The court ordered a test, which is currently in the preliminary phase. In the parallel proceeding, an exception previous of pending lawsuit was filed, based on the existence of the principal proceeding. The proposed exception is pending ruling. The amount involved in this proceeding is estimated to be approximately CPs 94 billion (approximately ThCh\$ 23,500,000).
- 20.- The Colombian Constitutional Court, under its authority to review records of actions for protection already ruled upon in first and second instances, selected seven actions for protection related to the El Quimbo hydroelectric project, which has been decided in favor of Emgesa. The plaintiffs of these actions for protection sought compensation saying that they belonged to trade associations such as: small handicraft fishermen, transporters, "paleros", foremen, constructors and contractors. As a result of this review, consolidated into one proceeding, the Constitutional Court passed ruling T-135, and notified Emgesa on February 11, 2014. The Constitutional Court considered that the manner of conducting the census of the El Quimbo hydroelectric project was in violation of the principle of the citizen participation. Although the decision does not impact the validity of the project's environmental license, it expands its geographical coverage and potentially adds additional affected parties. As a consequence of the above mentioned review, the Constitutional Court overturned the rulings of the courts in the first and second instances and ruled in favor of the plaintiffs. The

Constitutional Court ordered the inclusion and grant of the benefits included in the environmental license to them, and ordered, as protective measure for other similarly-situated people, that a new census be conducted in accordance with its order, particularly with respect to the right to effective participation by the local residents. On February 14, 2014, Emgesa filed a petition for clarification before the Constitutional Court which, while not disputing the decision, petitions the Court to clarify or limit its effects, particularly the economic effects. On March 6, 2014, Emgesa filed a writ to inform the Court of the actions it has taken to comply with the decision, such as: (i) including the seven plaintiffs identified by the Constitutional Court within the census of the El Quimbo hydroelectric project, (ii) holding informational sessions and social-economic interviews with the plaintiffs, (iii) forming a multi-disciplinary team to develop a structured methodological proposal to uphold the Court's ruling and (iv) providing a timetable of activities to develop by the company to comply with the objectives indicated. The Constitutional Court ruled on the petition for clarification that Emgesa requested, considering it inadmissible because in its opinion, the scope of the protected fundamental rights is well established in ruling T-135. Similarly, the Court considers that, since it is a proceeding in which seven protected lawsuits were consolidated, the competent authority to verify compliance with the Court's order is the court that ruled in the first instance on the first of the accrued proceedings (i.e. the Civil Chamber, Family Division of the High Court of the District of Neiva). This court of law will be the one in charge of carrying out public audiences requested by Emgesa to verify compliance with the judgment. There are no pending appeals. The amount of this proceeding is an undetermined.

- 21.- The fiscal authority in Peru, SUNAT, questioned Edegel in 2001 regarding the manner in which it was accounting for the valuation of its depreciating assets. Edegel had conducted a voluntary reevaluation for the 1996 fiscal year, and as a result of such reevaluation it recorded a reduction of goodwill with respect to assets. This depreciation was recorded as an expense. The amount rejected by SUNAT is related to financial interest paid during the construction phase of the power plants. SUNAT claims (i) that Edegel has not demonstrated that it was necessary to obtain financing to build the power plants or (ii) that such financing was actually incurred. Edegel has responded that SUNAT cannot request such evidence in its review because the reevaluation assigns the assets a market value when the reevaluation was performed, instead of the historical value of the assets. In this case, the methodology considered that the power plants of such scale were built with financings. In addition, Edegel claimed that if SUNAT disagreed with the valuation, it should have conducted its own appraisal, which it failed to do. On February 2, 2012, the Tax Court (TF) issued a ruling for the 1999 fiscal year in favor of Edegel regarding two of its power plants, but against it regarding the remaining four power plants, based on the fact that a verified financing was only evidenced for the first two power plants. Consequently, the TF ordered SUNAT to recalculate the taxes payable by Edegel, which amounted to €11 million and were paid by Edegel in June 2012. This amount will be recovered if Edegel obtains favorable rulings in the following claims it has subsequently filed:
- (i) an administrative contentious claim before the Judicial Power against the TF's ruling, filed in May 2012 (which would result in a complete recovery of the taxes).
- (ii) a partial appeal against the recalculation that SUNAT performed in order to comply with the TF's ruling, on the basis that the recalculation was incorrect, filed in July 2012 (which would result in a partial recovery of the taxes).

In August 2013, Edegel received notice of an unfavorable ruling regarding certain of the claims it had brought. Edegel filed an annulment appeal against ruling, since the resolution violates its motivation right and it is untimely. The annulment appeal that Edegel filed is pending resolution by the TF which is expected to be resolved in 2015. The TF has ruled on the appeal, but Edegel has not been notified yet of the decision.

For the 2000 to 2001 fiscal years, Edegel paid the equivalent of $\[mathbb{e}\]$ 5 million and made a provision of $\[mathbb{e}\]$ 1 million. Edegel filed new evidence in order to reduce the amount of that could be paid from $\[mathbb{e}\]$ 6 million to $\[mathbb{e}\]$ 1.3 million, however the TF could determine that the evidence is inadmissible as untimely.

The taxes involved in these proceedings is S/. 122,556,694 (approximately ThCh\$ 24,877,783), which is divided between the active amount of S/. 59,819,819 (approximately ThCh\$ 12,142,825) and the passive amount of S/. 62,736,874 (approximately ThCh\$ 12,734,958).

- 22.- In 2005, three lawsuits were filed against Endesa Chile, the Chilean Treasury and the Chilean Water Authority (DGA, in its Spanish acronym), which are currently being treated as a single proceeding, requesting that DGA Resolution No. 134, which established non-consumptive water rights in favor of Endesa Chile to build the Neltume hydroelectric power plant project be declared null as a matter of public policy, with compensation for damages. Alternatively, the lawsuits request the compensation for damages for the losses allegedly sustained by the plaintiffs due to the loss of their status as riparian owners along Pirehueico Lake, as well as due to the devaluation of their properties. The defendants have rejected these allegations, contending that the DGA Resolution complies with all legal requirements, and that the exercise of this right does not cause any detriment to the plaintiffs, among other arguments. The sums involved in these suits are undetermined. This case was joined with two other cases: the first one is captioned "Arrieta v. the State and Others" in the 9th Civil Court, docket 15279-2005 and the second is captioned "Jordán v. the State and Others," in the 10th Civil Court, docket 1608-2005. With regard to these cases, an injunction has been ordered against entering into any acts and contracts concerning Endesa Chile's water rights related to the Neltume project. On September 25, 2014, the Court of Law issued an unfavorable ruling against Endesa Chile that in essence declared the right to use water established by DGA Resolution No. 134 illegal and orders its cancellation in the corresponding Water Rights Register of the correspondent Real Estate Registrar. Endesa Chile filed an appeal and cassation resources with the Court of Appeals of Santiago, which to date are still pending.
- 23.- During 2010, three lawsuits for damages were filed against Endesa Chile by plaintiffs who alleged they were affected by the flooding of the Bio-Bio River in Region VIII of Chile. The plaintiffs sued Endesa Chile for losses caused by its deficient operation of the Ralco hydroelectric power plant during the flood. These three cases were joined, and a first instance ruling has been issued which denies the claim filed in all its parts. The ruling was appealed and such appeal has not yet been reviewed by the court. The plaintiffs are required to produce legal evidence proving the causal link between the operation of the Ralco hydroelectric power plant during the floods and the damages that the plaintiffs claim they sustained as a result of deficient facility operation. On March 27, 2012, there was a first instance judgment filed, which rejects the claim filed in all its parts. The plaintiff filed an appeal on March 12, 2013, where the Court of Appeals ordered proceedings to supplement the judgment, since there were exceptions and defenses that were not resolved in the first instance Court of Law filed a supplementary judgment, referring to the exceptions and defenses that were not resolved in the first initial judgment. On July 14, 2014, the Court of Appeals of Concepción rejected the appeal filed by the plaintiffs and confirmed the first ruling denying relief in the lawsuit. The plaintiffs filed an appeal with the Supreme Court, which is pending resolution. The amount involved in the three lawsuits currently pending against Endesa Chile is ThCh\$14,610,043, which is covered by an insurance policy.
- 24.- In July and September 2010, Ingeniería y Construcción Madrid S.A. and Transportes Silva y Silva Limitada, respectively, filed separate lawsuits against Endesa Chile and the DGA seeking to declare the annulment of DGA Resolution No. 134 that granted Endesa Chile's water rights for the Neltume hydroelectric station. Similarly, Ingeniería y Construcción Madrid S.A. and Transportes Silva y Silva Limitada, respectively, each filed suits against DGA Resolution No. 732 that authorized the relocation of the collection point of such water rights, arguing its invalidity as a violation of public policy. Ultimately, the plaintiffs attempted to demand payment for their water rights located in the area of influence of the hydraulic works for the future Neltume hydroelectric station. Endesa Chile has rejected these claims, contending that the plaintiffs are engaging in wrongful prosecution to prevent the construction of the power plant in order to obtain monetary compensation. The evidentiary period of the complaint filed by Ingeniería y Construcción Madrid S.A. (Case No. 7036-2010) has expired, and the parties have been summoned to hear judgment. Regarding the other lawsuit (Case No. 6705-2010), requesting the annulment of DGA Resolution No. 732, on March 12, 2012 a ruling was issued that declared the proceeding as abandoned. On June 27, 2012, Ingeniería y Construcción Madrid, filed a similar claim before another Court of Law (Case C-15156-2012), in which the discussion period and the regular evidentiary period have ended, and only some expert testimony is pending. On November 26, 2014, the court considering the lack of agreement between the parties, designated an expert, who has not accepted the position to date.

With respect to the Transportes Silva y Silva Ltda lawsuit (Case No. 16025-2012), which contests DGA Resolution No. 134, the proceeding was declared abandoned. In another lawsuit (Case No. 17916-2010), a similar request was made for the action to be declared abandoned, however, this request was denied. The plaintiff filed an appeal against the ruling, which was decided on May 10, 2013, declaring the proceeding abandoned. The resolution is final and executed. The amount of this proceeding is undetermined.

25.- On May 24, 2011, Endesa Chile was served with a lawsuit filed by 19 riparian owners along the Pirihueico Lake, seeking to nullify DGA Resolution No. 732, which authorized the relocation of water rights collection for the Neltume power plant, from the Pirihueico Lake drainage 900 meters downstream along Fui River. The plaintiffs seek to have this annulment annotated at the margin of the notarized instrument that memorialized DGA Resolution No. 732, which approved the transfer of the collection. The plaintiffs also seek to have the recording of the deed struck from the Water Rights Registry, if entered, and to require the Chilean Treasury, the DGA and Endesa Chile to pay damages to the plaintiffs as a result of the challenged DGA Resolution. The plaintiffs seek to reserve their right to indicate the type and amount of damages in a subsequent legal proceeding. The claim is for an undetermined amount because the plaintiffs have requested that damages be determined in another suit, once the DGA Resolution is nullified. To date, the discussion period has ended and the evidence writ has been issued, which when received by the parties was the object of a replacement appeal filed by the plaintiff and an annulment petition filed by Endesa Chile, both of which were denied. On August 20, 2013 a conciliation hearing was initiated, and is still pending to date.

Afterwards, hydraulic and appraisal expert analysis were carried out. The Court of Appeals of Santiago's resolution was also notified incorporating evidence, and Endesa provided documentary evidence consisting of: (i) a law report drafted by Mr. Cristián Maturana M., (ii) a law report drafted by Mr. Luis S. Figueroa, (iii) an engineering report drafted by Mr. Guillermo Cabrera, and (iv) an update of a land appraisal report on the zone farms drafted by Mr. Armando Illanes; Finally, other documents relative to the Environmental Impact Study (EIA, in its Spanish acronym) were provided, and testimonial evidence was presented both by Endesa Chile and by the plaintiffs. To date the regular and special evidentiary period has ended.

26.- The arbitration proceeding being heard by the International Chamber of Commerce (the Chamber), under the framework of the Bocamina Thermal Power Plant Extension Project contract for the turnkey supply of a coal thermal generation plant, located in Coronel, Region VIII of Chile, executed in July 2007 between Endesa Chile and a consortium comprised of: Ingeniería y Construcción Tecnimont Chile Compañía Limitada, Tecnimont SpA, Tecnimont do Brasil Construção e Administração de Projetos Ltda., Slovenské Energetické Strojárne a.s. (SES) and Ingeniería y Construcción SES Chile Limitada, (the "Consortium").

As a result of material breaches of the Consortium, for not finishing the works according to the terms and conditions agreed and within the time period stipulated in the contract and its supplementary documents, on October 16, 2012, Endesa Chile proceeded, strictly complying with the conditions authorized in the contract for such purpose, to collect the performance bonds, and in particular, those issued by Banco Santander Chile for US\$93,992,554 (approximately ThCh\$57,029,982) and the one from Credit Agricole for US\$18,940,295 (approximately ThCh\$11,492,024). To date, Endesa Chile has only been able to collect the performance bonds issued by Banco Santander Chile. Upon collection of the aforementioned performance bonds, Endesa Chile filed before the Chamber (Case 19015/CA) a request for arbitration to compel compliance with the contract plus compensation for damages, and, as an alternate request, termination of the contract with compensation for damages. In both cases, Endesa Chile reserved the right to file litigation regarding the amount and sum of the damages at a later stage. Endesa Chile based its claim on the serious non-compliance of the Consortium, including, amoung other material breaches: (i) material breach of the contractual date of the end of the works, (ii) the lack of payment to subcontractors and suppliers, which has forced Endesa Chile to take on part of their commitments to avoid a situation of total work stoppage, (iii) material breach of the schedule of intermediate control stages agreed to, (iv) breach of the "Open Book" delivery time period of the works, and (v) lack of compliance with safety and environmental standards agreed to and the administrative standards proscribed for managing the contract.

In turn, SES filed legal actions before the Chamber (Case 1924/CA) requesting that the collection of the performance bonds that Endesa Chile carried out be declared illegal.

On January 4, 2013, Endesa Chile notified the Consortium of the early termination of the contract due to material breach of its obligations according to the terms of it.

In January 2013, SES and Tecnimont separately contested the request for arbitration filed by Endesa Chile and sued Endesa Chile. Tecnimont sued for approximately US\$1,294 million (approximately ThCh\$785,134,500) and SES sued for US\$15 million (approximately ThCh\$9,101,250). On March 26, 2013, Endesa Chile responded to the counterclaims and petitioned for their dismissal. The proceeding filed by SES (Case 1924/CA) was consolidated with the arbitration proceeding described above.

On June 21, 2013, upon request of the arbitration court, the bases of the procedural proposals or simultaneous procedure were filed by each of the parties in a clear and precise manner as well as their respective proposed schedules. On July 2, 2013, the procedural order that established the procedural rules whereby the proceeding will be conducted was approved. On December 2, 2013 the parties exchanged legal briefs. Endesa Chile requested in its brief that the arbitrational court find (i) the defendants in breach of the contract, (ii) the defendants' breach was attributable to serious fraud or negligence on their part and (iii) that the contract termination be recognized as occurring due to the defendant's breach. On the grounds stated above, Endesa Chile has asserted that the performance bonds are consistent with the law and petitioned the court to order the defendants to pay fines and damages amounting to US\$373,269,376 (approximately ThCh\$226,481,193). Tecnimont requested an extension in order to object the documents, which was accepted by the arbitrational court.

The parties submitted documents, against which objections were filed. For the arbitration court, the parties resolved the objections raised by replacing the documents or performing complementation if necessary. On May 2, 2014, the parties submitted briefs, and rebuttal is expected to occur by January 15, 2015. (see Note 41).

27.- On August 22, 2013, Endesa Chile, Pehuenche and San Isidro filed before the Court of Appeals of Santiago a claim against the Chilean Superintendency of Electricity and Fuels (SEF). The claim asserts the illegality of Resolution ORD No. 7230, dated August 7, 2013, in which the SEF, relying on its interpretative and supervisory authority, decreed that consumption by distributing companies in excess of the contracted supply, with respect to electricity generators that are forced by means of a bid to supply electricity, must be covered by electricity surpluses generated by other companies. The distributors with surplus electricity can assign their surpluses to distributors with deficits, irrespective of the will of the respective generator. The claim asserts this is contrary to the law and exceeds SEF's faculties and authorities, resulting in an illegal resolution.

An injunction was requested, which was denied in the San Isidro and Pehuenche suits but was granted in the Endesa Chile suit. As a result, the effects of the decree are suspended. The three claims were heard one after the other and the result were communicated to all the companies. On April 10, 2014 the claims were dismissed as having been filed outside of the period allowed by law. An appeal was filed against such resolution before the Chilean Supreme Court, which accepted the appeal on July 8, 2014 and found the claim was filed in a timely manner. The cases were remanded to the Court of Appeals of Santiago to determine the validity of the claim, which are still pending of resolution.

28.- In August 2013, the Chilean Superintendence of the Environment (SMA, in its Spanish acronym) filed charges against Endesa Chile alleging several violations of Exempt Resolution No. 206, dated August 2, 2007 and its supplementary and explanatory resolutions that environmentally certified the Bocamina Thermal Power Plant Extension Project. These alleged violations are related to the cooling system discharge channel, an inoperative Bocamina I desulphurizer, non-compliance with information delivery obligations, surpassing CO limits, failures in the acoustic perimeter fence of Bocamina I, excessive noise levels and having no technological barriers that prevent the massive entry of biomass in the intake of the central power plant. Endesa Chile submitted a compliance program that was not approved. On November 27, 2013, SMA added two additional violations to its charges. Endesa Chile presented its defense in December 2013, partially recognizing some of these violations (which could reduce the fine by 25% in case of recognition) and contesting the rest. On August 11, 2014, SMA passed Resolution No. 421 that fined Endesa Chile 8,640.4 UTA for environmental non-compliances that are the matter of the sanctioning proceeding. Endesa Chile filed an illegality claim against the SMA before the Third Environmental Court of Valdivia that to date is pending resolution.

In December 2013, the fishermen's and algae collector trade unions of Coronel, among others, filed two constitutional protection appeals against Endesa Chile before the Court of Appeals of Concepcion. The first appeal alleges Endesa Chile would be operating Unit II of the Bocamina thermal power plant without the proper environmental authorizations. The second appeal alleges that Endesa Chile would not have an operational desulphurizing plant for the operation of Unit I of the Bocamina thermal power plant. The first plaintiff obtained a temporary injunction that halted operation of Unit II of the Bocamina thermal power plant. Endesa Chile contested the injunction but was denied relief. Endesa Chile also presented its defense in both resources, providing the background for rejection. On May 29, 2014, the ruling was upheld that accepted the appeal and imposed a series of requirements designed to prevent the Bocamina thermal power plant from causing environmental damage. An appeal was filed against this judgment before the Chilean Supreme Court, with which on November 6, 2014 ruling was sentenced that although it confirms the appealed decision (i.e. it confirms the resolution that picked up the protection appeals it contains certain declarations that are favorable for the company). Definitely, it recognizes that the Bocamina II thermal power plant has an Environmental Qualification Resolution (RCA, in its Spanish acronym), and the changes introduced in it must be approved through an Environmental Impact Study (EIA, in its Spanish acronym).

29.- On May 12, 2014, Compañía Eléctrica Tarapacá S.A., (Celta) formally filed an arbitration claim against Compañía Minera Doña Inés de Collahuasi, requesting that the Arbitration Court of Law declare that through the contracts entered into in 1995 and 2001, the parties have established a long-term contractual relation, characterized by the economic balance that there must be in their reciprocal services supplied and that, due to the above, greater costs corresponding to the investment that must be made to comply with the emission standard contained in DS (Supreme Decree) (MMA) No. 13, 2011 must be shared by the parties. Based on this, the defendant should start paying up to the maturity of the contract, a fixed monthly charge that as of March 31, 2020 amounts to US\$72,275,000 (approximately ThCh\$43,852,856) for the proportional part of the investments that the defendant must pay due to the Supreme Decree abovementioned.

The claim was notified on July 3, 2014. On August 8, 2014 Collahuasi contested Celta's claim and filed a counterclaim against Celta requesting that the Court declare that Celta has violated the prohibition to call on as precedent what was agreed to in the modifications of the 2009 supply contracts, reserving the right to discuss and prove the amount of the detriment. On August 26, 2014, Celta filed its response to the main claim and contested the counterclaim. On September 11, 2014 Collahuasi filed its rejoinder to the main claim and its response to the counterclaim. On October 1, 2014, Celta filed its response to the counterclaim. Additionally, the Arbitration Judge formulated a questionnaire with questions separately to each one of the parties and also with common questions for both.

Once these were responded, the arbitrator gave the parties a deadline until January 16, 2015 to contest or observe the answers provided and the documents attached specifying the contrary.

The management of Enersis considers that the provisions recorded in the Consolidated Financial Statements are adequate to cover the risks resulting from litigation described in this Note. It does not consider there to be any additional liabilities other than those specified.

Given the characteristics of the risks covered by these provisions, it is not possible to determine a reasonable schedule of payment dates if there are any.

36.4 Financial restrictions

A number of the company's loan agreements, and those of some of its subsidiaries, include the obligation to comply with certain financial ratios, which is normal in contracts of this nature. There are also affirmative and negative covenants requiring the monitoring of these commitments. In addition, there are restrictions in the events-of-default clauses of the agreements which require compliance.

1. Cross Default

Some of the financial debt contracts of Enersis and of Endesa Chile contain cross default clauses. The credit line agreements governed by Chilean law, which Endesa Chile signed in February 2013 and Enersis in April 2013, stipulate that cross default arises only in the event of non-compliance by the borrower itself, with no reference made to its subsidiaries, i.e. Enersis or Endesa Chile, respectively. In order to accelerate payment of the debt in these credit lines due to cross default originating from other debt, the amount overdue of a debt must exceed US\$50 million, or the equivalent in other currencies, and other additional conditions must be met such as the expiry of grace periods. Since being signed, these credit lines have not been disbursed. They mature in February 2016 and April 2016, respectively. Endesa Chile's international credit line governed by New York State law, which was signed in July 2014 and expires in July 2019, also makes no reference to its subsidiaries, so cross default arises only in the event of non-compliance by the borrower itself. For the repayment of debt to be accelerated under this facility due to cross default on another debt, the amount in default should exceed US\$50 million or its equivalent in other currencies. It must also meet other conditions, including the expiration of any grace periods, and a formal notice of intent to accelerate the debt repayment must have been served by creditors representing more than 50% of the amount owed or committed in the contract. This line of credit has not currently been utilized.

Regarding the bond issues of Enersis and Endesa Chile registered with the United States Securities and Exchange Commission (the SEC), commonly called "Yankee bonds", a cross default can be triggered by another debt of the same company or of any of their Chilean subsidiaries, for any amount overdue provided that the principal of the debt giving rise to the cross default exceeds US\$30 million or its equivalent in other currencies. Debt acceleration due to cross default does not occur automatically but has to be demanded by the holders of at least 25% of the bonds of a certain series of Yankee bonds. In addition, events of bankruptcy or insolvency of foreign subsidiaries have no contractual effects on the Yankee bonds of Enersis or Endesa Chile. The Enersis Yankee bonds mature in 2016 and 2026, and those of Endesa Chile do so in 2015, 2024, 2027, 2037 and 2097. For the specific Yankee Bond that was issued in April 2014 and matures in 2024, the threshold for triggering cross default increased to US\$50 million or its equivalent in other currencies.

The Enersis and Endesa Chile bonds issued in Chile state that cross default can be triggered only by the default of the issuer when the amount in default exceeds 3% of total consolidated assets in the case of Enersis, and US\$50 million or its equivalent in other currencies in the case of Endesa Chile. Debt acceleration requires the agreement of at least 50% of the holders of the bonds of a certain series.

2. Financial covenants

Financial covenants are contractual commitments with respect to minimum or maximum financial ratios that the company is obliged to meet at certain periods of time (quarterly, annually, etc.). Most of the financial covenants of the Group limit the level of indebtedness and evaluate the ability to generate cash flows in order to service the companies' debts. Various companies are also required to certify these covenants periodically. The types of covenants and their respective limits vary according to the type of debt.

The Series B2 domestic bonds of Enersis includes the following financial covenants, whose definitions and calculation formulas are set out in the respective contract:

- Consolidated Equity: Minimum Equity must be maintained of Ch\$616,047 million, a limit adjusted at the end of each year as established in the indenture. Equity is the sum of Equity attributable to the shareholders of Enersis and minority interests. As of December 31, 2014, Enersis equity was Ch\$8,279,219 million.

- Debt Ratio: A debt ratio, defined as Total liabilities to Equity, should be no more than 2.24. Total liabilities are the sum of Total current liabilities and Total non-current liabilities, while Equity is the sum of Equity attributable to the shareholders of Enersis and non-controlling interests. As of December 31, 2014, the Debt Ratio was 0.92.
- Unsecured Assets: The ratio of Unsecured assets to Unsecured total liabilities must be at least 1. Total Unsecured or free assets is the difference between Total assets and Total secured assets. Total unsecured or free assets consists of Total assets less the sum of Cash, Bank balances, Accounts receivable from related entities, current, Payments made in advance, current, Non-current accounts receivable from related entities, and Identifiable intangible assets, gross, while Total secured assets relates to assets pledged in guarantee. On the other hand, Unsecured total liabilities consist of the sum of Total current liabilities and Total non-current liabilities, less liabilities secured by collateral. As of December 31, 2014, this ratio was 1.81.

It is important to note that the undisbursed credit line in Chile includes other covenants such as leverage and debt repayment capacity ratios (Debt/EBITDA), while the Yankee bonds are not subject to financial covenants.

As of December 31, 2014, the most restrictive financial covenant for Enersis was the Debt/EBITDA ratio with respect to local credit lines that expire in April 2016.

The Endesa Chile bonds issued in Chile include the following financial covenants whose definitions and calculation formulas are established in the respective indentures:

Series H

- Consolidated Debt Ratio: The consolidated debt ratio, which is Financial debt to Capitalization, must be no more than 0.64. Financial debt is the sum of interest-bearing loans, current; Interest-bearing loans, non-current; Other financial liabilities, current; Other financial liabilities, non-current; and Other obligations guaranteed by the issuer or its subsidiaries; while Capitalization is the sum of Financial liabilities, Equity attributable to the shareholders of Enersis and Non-controlling interests. As of December 31, 2014, the ratio was 0.37.
- Consolidated Equity: A minimum Equity of Ch\$761,661 million must be maintained; this limit is adjusted at the end of each year as established in the indenture. Equity corresponds to Equity attributable to the shareholders of Enersis. As of December 31, 2014, the equity of Endesa Chile was Ch\$2,700,280 million.
- Financial Expense Coverage: A financial expense coverage ratio of at least 1.85 must be maintained. Financial expense coverage is the quotient between i) the gross margin plus Financial income and dividends received from associated companies, and ii) Financial expenses; both items refer to the period of four consecutive quarters ending on the quarter being reported. For the period ended December 31, 2014, this ratio was 9.72.
- Net Asset Position with Related Companies: A Net asset position must be maintained with related companies of no more than a hundred million dollars. The Net asset position with related companies is the difference between i) the sum of Accounts receivable from related entities, current, Accounts receivable from related entities, non-current, less transactions in the ordinary course of business at less than 180 days term, short-term transactions of associates of Endesa Chile in which Enersis has no participation; and long-term transactions of associates of Endesa Chile in which Enersis has no participation; and ii) the sum of Accounts payable to related entities, current; Accounts payable to related entities, non-current, less transactions in the ordinary course of business at less than 180 days term; short-term transactions of associates of Endesa Chile in which Enersis has no participation; and long-term transactions of associates of Endesa Chile in which Enersis has no participation. As of December 31, 2014, using the exchange rate prevailing on that date, the Net asset position with related companies was a negative US\$330.29 million, indicating that Enersis is a net creditor of Endesa Chile rather than a net debtor.

Series M

- Consolidated Debt Ratio: The consolidated debt ratio, which is Financial debt to Capitalization, must be no more than 0.64. Financial debt is the sum of Interest-bearing loans, current; Interest-bearing loans, non-current; Other financial liabilities, current; and Other financial liabilities, non-current; while Capitalization is the sum of Financial liabilities, Equity attributable to the shareholders of Enersis and Non-controlling interests. As of As of December 31, 2014, the debt ratio was 0.37.
- Consolidated Equity: Same as for Series H.
- Financial Expense Coverage Ratio: Same as for Series H.

The rest of Endesa Chile's debt and the undisbursed credit lines include other covenants such as leverage and debt coverage ratios (debt/EBITDA ratio), while the Yankee bonds are not subject to financial covenants.

In the case of Endesa Chile, the most restrictive financial covenant as of December 31, 2014 was the Debt Ratio requirement for the credit line under Chilean law, which expires in February 2016.

In Peru, the debt of Edelnor only has one covenant, a Debt Ratio with respect to the local bonds whose final maturity is in January 2033. On the other hand, the debt of Edegel includes the following covenants: Debt Ratio and Debt Coverage (Debt/EBITDA). As of December 31, 2014, the most restrictive financial covenant for Edegel was the Debt/EBITDA ratio corresponding to the financial leasing agreement with Banco Scotiabank that expires in March 2017. Piura's debt includes the following covenants: Debt Coverage and Level of Indebtedness. As of December 31, 2014, the most restrictive covenant on Piura debt was the indebtedness covenant from the Reserva Fría plant construction leasing agreement with Banco de Crédito del Perú which expires in July 2020.

In Brazil, the debt of Coelce includes compliance with the following covenants: Debt Coverage (Debt/EBITDA), Level of Indebtedness, and the Interest Coverage ratio (EBITDA/financial expenses). As of December 31, 2014, Coelce's most restrictive financial covenant was the Debt/EBITDA ratio for the 3rd local bond issue with a final maturity in October 2018. The debt corresponding to Ampla includes the following covenants: Debt Coverage (the Debt/EBITDA ratio), the Indebtedness ratio and the Interest Coverage Ratio (EBITDA/financial expenses). As of December 31, 2014, the most restrictive financial covenant for Ampla was the Debt/EBITDA ratio for the 6th, 7th and 8th local bond issues, whose final maturity is July 2019. Cien's debt includes covenants on Debt Coverage (Debt/EBITDA) and the Debt Ratio on a loan with the Banco Nacional do Desenvolvimiento maturing in June 2020. As of December 31, 2014, its most restrictive covenant was the Debt/EBITDA ratio.

In Argentina, Endesa Costanera has just one covenant, the maximum debt, corresponding to a loan from Credit Suisse First Boston International which matures in February 2016. The debt of El Chocón includes covenants related to Maximum Debt, Net consolidated equity, Interest Coverage, Debt Coverage (debt/EBITDA) and the leverage ratio. In the case of El Chocón, as of December 31, 2014, the Interest Coverage covenant (EBITDA / financial expenses) was in default on the loan with Standard Bank, Deutsche Bank and Itau, which expires in February 2016. The company is negotiating the respective waiver with these creditors. There is no risk of cross default or of a breach for Enersis.

In Colombia, the debts of Codensa and Emgesa are not subject to compliance with financial covenants, a situation that also applies to the debt of the rest of the companies not mentioned in this note.

Lastly, in most of the contracts, debt acceleration for non-compliance with these covenants does not occur automatically but is subject to certain conditions, such as a cure period.

As of December 31, 2014 and 2013, neither Enersis nor any of its subsidiaries were in default under their financial obligations summarized here or other financial obligations whose defaults might trigger the acceleration of their financial commitments, with the exception of our Argentine generation subsidiaries Hidroeléctrica El Chocón at the close of 2014 as mentioned above, and Endesa Costanera at the close of 2013.

Since March 2012, Endesa Costanera had not paid the semiannual installments on a supplier loan with Mitsubishi Corporation, for a total of US\$107.1 million, including principal and interest. After a long period of negotiations, a restructuring agreement was signed on October 27, 2014. The main conditions of this restructuring include: the elimination of accrued interest at 09/30/14 of US\$66 million; the rescheduling of the capital repayment of US\$120.6 million over 18 years with a grace period of 12 months, to be fully repaid by December 15, 2032; a minimum annual capital repayment of US\$3,000,000 in quarterly installments; an interest rate of 0.25% per annum; the maintaining of the pledge over assets; and the applying of restrictions on the payment of dividends. The preceding condition to making the agreement effective was that Endesa Costanera SA should pay US\$5,000,000 of the debt due within 15 business days of signing the agreement; this was carried out on November 14, 2014.

This situation does not represent a risk of cross default or a breach for Enersis.

36.5 Other Information

Endesa Costanera S.A.

- Resolution 95/13 from the Argentine Energy Secretariat which was published on March 26, 2013 made significant changes to the remunerations system for generating companies and other aspects of operations in the wholesale electricity market. The Energy Secretariat's Resolution 529/14, published on May 23, 2014, updated the remunerations system for generation companies, replacing Schedules I, II and III of Res. 95/13 and adding a new system of Non-Recurring Maintenance Work Remunerations. These are determined on a monthly basis and are calculated depending on the total amount of power generated. The amounts paid are to be used to finance major maintenance work, subject to the approval of the Energy Secretariat. Nevertheless, our Argentine subsidiary Endesa Costanera still shows a deficit in working capital, which has led to problems in its short-term financial equilibrium, and jeopardized its ability to continue operating as a going concern and recover its assets. Endesa Costanera expects to correct the present situation depending on a favorable resolution of requests made to the Argentine government.
- On November 25, 2010, the Energy Secretariat and major electricity generating companies signed the "AGREEMENT FOR PROJECT MANAGEMENT AND OPERATION, INCREASING THE AVAILABILITY OF THERMAL ELECTRICITY GENERATION AND ADJUSTMENT TO ELECTICITY GENERATION REMUNERATION FOR 2008-2011" (hereinafter the "Agreement"). Subsequently, on March 10, 2011, the Energy Secretariat announced in note SE N ° 1593/11, its approval of the generation project submitted by SADESA, DUKE and generating companies which form part of the ENEL Group (Hidroeléctrica El Chocón, Endesa Costanera S.A. and Central Dock Sud S.A) (together "the Generators"), under the aforementioned Agreement.

The Generators have committed to implement the Sales Settlements with Undefined Expiry Dates (*Liquidaciones de Venta con Fecha de Vencimiento a Definir* – "LVFVD") that arose during the period from January 1, 2008 to December 31, 2011 for the construction of a new 800 MW combined cycle "Forced Return Plant" to be installed in the Province of Santa Fe. This contribution will be returned once the interest rate stipulated in Resolution SE N ° 406/03 is added and converted to US currency at the date the Agreement was signed, in 120 equal and consecutive monthly installments from the start-up of the commercial operation of the combined cycle, plus an annual performance equivalent to that obtained by applying a rate of 30 day LIBOR + 5%.

During December 2014, the open cycle plant began operating with two 270 MW turbine generators. It is expected that these will become high efficiency combined cycle generators during 2015.

The LVFVD applied to the project by the Generators will be recorded in US currency when the facts and circumstances that permit them to be recognized are secure. The effects of this dollarization, if carried out, would be reflected in the next annual financial statements and would create a gain of approximately ThCh\$109,507,000 between the electricity generating companies forming part of the ENEL Group (Hidroeléctrica El Chocón, Endesa Costanera S.A. and Central Dock Sud S.A.).

Edesur S.A.

- On July 12, 2012, the Argentine electricity regulatory authority (Ente Nacional Regulador de la Electricidad de la República Argentina - ENRE), through its Resolution 183/2012, informed Edesur of the appointment of a "veedor," or inspector, (Engineer Luis Miguel Barletta) for an extendable term of 45 days in order to control and verify all normal administrative actions linked to the normal provision of the public utility electricity distribution service by Edesur.

These administrative actions refer particularly to Edesur's actions to comply with the legal and accounting requirements governing sufficiency of funds to pay all of the obligations assumed, as well as the adjustments needed to ensure that its actions comply with its obligations under its concession contract. The veedor's oversight was extended by ENRE Resolutions 246/2012, 337/2012 and 34/2013; ENRE Provision 25/2013; Resolution 243/2013; ENRE Provision 2/2014 and 36/14, Resolution N° 31/14.

ENRE Provision 244/14 dated September 3, 2014, designated Engineer Rubén E.Segura as substitute for Ricardo Alejandro Martinez for an extendable term of 90 days, to enable him to continue monitoring and supervising all normal administrative and disposal activities involved in Edesur S.A.'s normal business of providing public power distribution services.

The appointment of the veedor does not imply the loss of control of Edesur by Enersis. Edesur considers that this appointment and its justification are inappropriate and therefore it has brought legal proceedings against the ENRE each time the period has been extended.

Continuing with the procedure established under its Resolution 250/2013 dated June 24, 2014 the SE issued its Note N° 4012/2014, which approved the figures for the Cost Monitoring Mechanism (MMC, from its name in Spanish) to March 2014. On October 9, 2014, the MMC values to August 2014 were approved in SE Note N° 486/2014, and on December 18, 2014 the MMC values to December 2014 were approved in SE Note N° 1136/2014. These notes allowed Other operating income of ThCh\$144,485,000 to be recognized for the fiscal year ended December 31, 2014, which generated a credit that was partially offset by the liability of ThCh\$41,005,000 recorded for the PUREE surplus retained by Edesur. This implied the recognition of interest on both items, which involved a net benefit of ThCh\$23,849,000 for Edesur.

At the date these financial statements were issued, the credit balance generated by the aforementioned Resolution No. 250/2013 and Notes SE N° 6852/2013, N° 4012/2014, N° 486/2014 and N° 1136/2014 totaled ThCh\$253,484,000 and is presented in "Other assets" in current assets.

The outstanding LVFVDs are partially repaid by eliminating the debt owed by the Company to CAMMESA, as provided in Resolution No. 250/2013, SE Notes N° 6852/2013, N° 4012/2014, N° 486/2014 and N° 1136/2014. Therefore, Edesur rejected debit notes issued by CAMMESA for ThCh\$28,403,000 in interest for payment delays, as Resolution No. 250/2013 imposed a special regime for payment of unpaid energy purchases at the date of this decision, having given therein the relevant instructions and authorizations to CAMMESA, and extending this procedure through SE Notes N° 6852/2013, N° 4012/2014, N° 486/2014 and N° 1136/2014. Therefore, Edesur presented the waiver indicated in Resolution No. 250/2013. The failure to issue the LVFVDs is outside the jurisdiction of the Company and therefore it is not their responsibility. Consequently, Edesur considers such obligations paid in a timely manner and does not recognize interest on this debt.

Centrales Hidroeléctricas de Aysén, S.A.

- On July 9, 2014, the Ministers' Committee issued (i) Exempt Resolution 569 resolving the invalidation process, and (ii) Exempt Resolution 570 resolving the claims filed by individuals, citizens' organizations and the proponent of the Aysén Hydroelectric Project against Exempt Resolution 225/2011 issued by the Aysén del General Carlos Ibañez del Campo Region's Assessment Committee, the project's Environmental Qualification Resolution, or RCA.

Centrales Hidroeléctricas de Aysén S.A. was notified of these agreements and resolutions on July 14, 2014. Since appeals may be filed with the environmental court within 30 days of this notification, Centrales Hidroeléctricas Aysén S.A. is currently evaluating and analyzing the different legal actions and options that may be taken.

At December 31, 2014, a decision regarding the water rights application requested by Hidroaysén to the Chilean Water Directorate remains pending (See Note 41).

37. PERSONNEL FIGURES

Enersis personnel, including that of subsidiaries and jointly-controlled companies in the five Latin American countries where the Group is present, is distributed as follows as of December 31, 2014 and 2013:

		12-31-2	014

38. SANCTIONS

The following companies belonging to the Group have received sanctions from the administrative authorities:

a) Subsidiaries

1.- Endesa Chile

- Income for fiscal year 2011: the Chilean Internal Revenue Service (SII) issued a fine after investigating the use of a credit for taxes paid abroad on income earned in other countries. The investigation found discrepancies in the calculation of net income from foreign sources, and a tax credit for a lower amount should have been used for that foreign income than declared at the time on the FY 2011 Income Tax Return. A fine of Ch\$82,923,124 was imposed. Closed and paid (May 2014).
- During the 2011 fiscal year, the Company was fined 1,380 UTA (Annual Tax Units), equivalent to ThCh\$683,315 by the Superintendency of Electricity and Fuels (SEF) for the blackout that occurred on March 14, 2010. Endesa Chile filed an appeal against the measure with the Santiago Court of Appeals, which rejected the appeal on January 18, 2013 and upheld the fine. Endesa Chile then filed an appeal against this ruling with the Supreme Court who, on November 20, 2013, rejected the second appeal and once again upheld the fine, but reduced its amount to 1,246 UTA, equivalent to ThCh\$616,964.

Closed and paid.

- In the 2012 fiscal year, the Company received a fine, plus interest, totaling ThCh\$13,151 from the Chilean Tax Service (SII) for the excessive use of tax credits for the 2010 tax year. The amount was paid on March 28, 2013. Closed and paid.
- During the 2012 fiscal year, the Company was fined 1,200 UTA (Annual Taxation Units) by the Electricity and Fuels Superintendency (SEF) for the blackout that occurred on September 24, 2011. Endesa Chile filed a request for reconsideration with the SEF; this was denied in Exempt Resolution 703 of March 25, 2013, which also upheld the fine. The Company later filed appeal No. 2262-2013 challenging the ruling with the Santiago Court of Appeals. After studying the appeal, the Court of Appeals confirmed the fine imposed by the SEC but reduced it from 1,200 to 400 UTA. Endesa filed another appeal against this ruling with the Supreme Court, which upheld the ruling and kept the fine at 400 UTA (approx. ThCh\$203,059).

Closed and paid.

- In January 2013, Endesa Chile was notified of SEF Exempt Resolution 2496 fining the Company 10 UTA, equivalent to ThCh\$4,952 for violating Article 123 of Decree Law (DFL) 4/20,018 of 2006 due to its failure to report to the SEF the commissioning of its electricity facilities by the deadline provided for in that law. To clear the charges, Endesa Chile paid the fine in full.

Closed and paid.

In the first quarter of 2013, Endesa Chile was notified of three resolutions issued by the Health SEREMI (Regional Ministerial Office) of the Maule Region, Resolutions 1057, 085, and 970, which ruled on health summary proceedings RIT Nos. 355/2011, 354/2011, and 256/2011, respectively, imposing a 20 UTM fine for each of the proceedings. The fines were imposed for the following violations: Resolution 1057 penalizes a health violation of Decree 594 of 1999, Regulations on Basic Health and Environmental Conditions in the Workplace, specifically, at the Cipreses Plant facilities; this fine has been paid in full. Resolution 085 penalizes a violation of Executive Decree 90/2011, which requires a statement of the emissions made in 2009 and 2010 by a 20.8-kW-capacity Siemens-Schukertwerke A6 power generator located at the Bocatoma Maule Isla facility. This resolution is currently being challenged. Resolution 970 penalizes a violation of Executive Decree 90/2011, which requires a statement of the emissions made in 2009 and 2010 by a 34 kW Conex generator located at the Bocatoma Maule Isla facility. This resolution is currently being challenged. Total: 60 UTM, equivalent to ThCh\$2,592.

Endesa received notification in September 2013 of ORD No. 603 issued by the Superintendency of the Environment (SMA) initiating sanction proceedings and filing charges against Endesa as Holder of the Expansion Project for Unit Two of the Bocamina Plant for a number of violations against environmental regulations and the RCA environmental regulation instrument. The sanction proceedings are the result of inspections conducted by SMA personnel on February 13 and 14 and on March 19, 26, and 27, 2013, at the Bocamina thermoelectric facilities. The inspections found a number of violations of Exempt Resolution 206 of August 2, 2007 (RCA 206/2007), which was clarified by Exempt Resolutions 229 of August 21, 2007 (RCA 229/2007) and 285 of October 8, 2007 (RCA 285/2007) giving environmental approval to this expansion project. The infractions consist primarily of (i) not having a discharge channel for the cooling system that extends 30 meters into the ocean from the edge of the beach; (ii) not having the Bocamina I Desulfurization unit in operation; (iii) not submitting the information requested by the Superintendency's official on past records of on-line emissions reports (CEM reports) from the startup of operations until the present time; (iv) exceeding the CO limit for Bocamina I set in the RCA for Bocamina II in January 2013; (v) defects and gaps between panels in the Bocamina I perimeter acoustic enclosure; (vi) noise emissions that exceed regulatory limits; and (vii) not having technological barriers that prevent biomass from pouring into the plant's intake.

Endesa submitted a compliance schedule within the time frame allotted, that was rejected. On November 27, 2013, the SMA reformulated the charges filed, adding two new charges (failure to comply with RCA 206/2007, considered a grave violation, and failure to comply with the information requirement issued in Ord UIPS 603, which is also considered a grave violation).

On August 11, 2014, the SMA issued Resolution No. 421 which penalized Endesa for these environmental breaches applying a fine of 8,640.4 UTA (approximately ThCh\$4,478,976). Endesa filed a counter-claim of illegality before the Third Environmental Court of Valdivia, which is currently pending.

- The Labor Directorate (*Inspección del Trabajo*) of the Bío Bío Region fined Endesa ThCh\$2,523 for failure to fulfill its duties as the operating company after confirming, on June 12, 2014, an accident suffered by a worker employed by the contractor Metalcav at the Bocamina II worksite. Payment of the fine is in process at this time.

 Closed and paid.
- On May 20, 2014, the Valparaiso Court of Appeals confirmed the fine of ThCh\$2,646 imposed by the Quintero Local Police Court (*Juzgado de Policía Local*) upholding CONAF's claim that Endesa cut trees without first having a forestry management plan approved by CONAF. The trees were cut in the Valle Alegre area in lot 22, site 3 in the municipality of Quintero in order to clear trees from the high voltage wires. The fine was paid through the appropriate court. **Closed and paid.**
- On June 23, 2014, the SISS (Sanitary Services Superintendency) fined Endesa 13 UTA (approximately ThCh\$6,599) for discharging liquid waste from the San Isidro II thermal plant during the cooling process in excess of the amount permitted under D.S. 90 on sulfate concentration.
 Closed and paid.
- In July 2014 the Coronel Labor Directorate fined Endesa for labor legislation violations relating to staff serving at the Bocamina plant. The infringements are: i) exceeding the maximum of two hours overtime per day; ii) not allowing staff to rest on Sundays; iii) incorrectly recording attendance; iv) exceeding the maximum 10-hour working day. The fine imposed for these offenses totaled Ch\$10,122,720, which the company has paid in full. **Closed and paid.**

2.- Pehuenche

- During the 2011 fiscal year, the Company was fined 602 UTA (Annual Tax Units), or approximately ThCh\$298,084 by the Electricity and Fuels Superintendency (EF) for the blackout that occurred on March 14, 2010. Pehuenche filed an appeal against the measure with the Santiago Court of Appeals, which rejected the appeal on January 18, 2013 and upheld the fine. Pehuenche filed an appeal against this ruling with the Supreme Court, which rejected the appeal on November 20, 2013, and upheld the fine but reduced the amount to 421 UTA, equivalent to ThCh\$208,461.

Closed and paid.

On October 2, 2013, the Securities and Insurance Superintendency (SVS) fined Empresa Eléctrica Pehuenche S.A. and its CEO for alleged violations of Article 54 of Law 18,046 "over the right of all shareholders to examine the annual report, balance sheet, inventory, minutes, ledgers, and external auditors' reports during the 15 days prior to a company's ordinary shareholders' meeting." It resolved the following:

"To impose on Empresa Eléctrica Pehuenche S.A. and its General Manager, Lucio Castro Márqez, a fine of 150 UF each for violation of Article 54 of Law 18,046 and Article 61 of the Regulations on Corporations in effect at the time the events penalized occurred."

The fine was applied as a result of a claim made by Tricahue Inversiones S.A.'s against Empresa Eléctrica Pehuenche S.A. based on the fact that, on April 24, 2012, the Tricahue S.A. General Manager went to Pehuenche's offices to examine the Minutes book of the company's Board of Directors and stated that he was first required to sign a statement of confidentiality and indemnity in Pehuenche's favor, which he considered illegal and arbitrary.

On August 24, 2012, Tricahue Inversiones S.A. withdrew its complaint filed against Empresa Eléctrica Pehuenche S.A.

The Company and its General Manager, respectively, exercised the action provided for under Article 30 of Decree Law 3,538, within the conditions and time frame required, to file a claim against the SVS resolution with the ordinary courts of law to have the resolution revoked.

Finally, on May 20, 2014, the Court recognized the claim filed and revoked the sanction applied as groundless. **Closed**.

3.- Chilectra S.A.

- Income for fiscal year 2012 (2011 business year): the SII fined Chilectra after an audit of the 2012 tax return which detected discrepancies in the determination of taxable net income, specifically in an amount deducted as a carryover loss. That entry had been adjusted as a result of audits of the entry corresponding to previous years, and it was lowered with respect to the amount declared at that time. Fine: Ch\$114,291,807.

 Closed and paid (June 2014).
- During the fiscal year 2012, Chilectra SA was sanctioned by the Superintendency of Electricity and Fuels with 19 fines amounting to ThCh\$1,050,663.
- During the fiscal year 2013, Chilectra SA was sanctioned by the Superintendency of Electricity and Fuels with 7 fines amounting to ThCh\$227,507.
- During the fiscal year 2014, Chilectra SA was sanctioned by the Superintendency of Electricity and Fuels with 8 fines amounting to ThCh\$459,453.

4.- Edesur S.A.

- From January 1, 2013 to June 30, 2013, Edesur S.A. received 150 fines from the Energy Regulatory Body (*Ente Nacional Regulador de la Electricidad* ENRE) totaling \$23,640,000 Argentine pesos (approximately ThCh\$1,677,414) for failure to comply with regulations on technical and commercial quality and on road and highway safety. Appeals against the fines have been filed.
- From July 1, 2013 to September 30, 2013, Edesur S.A. received 111 fines from the Electricity Regulatory Body (ENRE) amounting to \$28,270,000 Argentine pesos (approximately ThCh\$2,005,943) for failure to comply with technical and commercial quality regulations, and Th\$1,536 Argentine pesos (approximately ThCh\$108,989) for failure to comply with road and highway safety regulations. Appeals against the fines have been filed.

- From October 1, 2013 to December 31, 2013, Edesur S.A. received eight fines from the Electricity Regulatory Body (ENRE) amounting to \$2,766,029 Argentine pesos (approximately ThCh\$196,268) for failure to comply with technical and commercial quality regulations, and Th\$4,973,300 Argentine pesos (approximately ThCh\$352,889) for failure to comply with road and highway safety regulations. Appeals against the fines have been filed.
- From January 1, 2014 to June 30, 2014, Edesur S.A. received 13 fines from the Electricity Regulatory Body (ENRE) amounting to \$10,685,000 Argentine pesos (approximately ThCh\$758,171) for failure to comply with technical and commercial quality regulations, and 20 fines totaling Th\$26,975 Argentine pesos (approximately ThCh\$1,914,055) for failure to comply with road and highway safety regulations. In addition, the company has been ordered to pay \$389,000,000 Argentine pesos (approximately ThCh\$27,602,123) in compensation to users.
- From 1 July 2014 to September 30, 2014, Edesur SA received three fines from the Electricity Regulatory Body (ENRE) amounting to \$114,627 Argentine pesos (approximately ThCh\$8,134) for failure to comply with technical and commercial quality regulations, and 12 fines totaling \$13,112,132 Argentine pesos (approximately ThCh\$930,392) for failure to comply with road and highway safety regulations.
- From 1 October 2014 to December 31, 2014, Edesur SA received four fines from the Electricity Regulatory Body (ENRE) amounting to \$35,914,427 Argentine pesos (approximately ThCh\$2,548,366) for failure to comply with technical and commercial quality regulations, and 11 fines totaling \$19,853,878 Argentine pesos (approximately ThCh\$1,408,764) for failure to comply with road and highway safety regulations.

5.- Hidroeléctrica El Chocón S.A.

- During 2012, Hidroeléctrica El Chocón (HECSA) was fined Th\$3,069 Argentine pesos (approximately ThCh\$217,766) by the Jurisdictional Authority of the Limay, Neuquén, and Negro River Basins (Autoridad Jurisdiccional de las Cuencas de los Ríos Limay, Neuquén y Negro, AIC) for failure to comply with certain obligations contained in the Concession Agreement. The company has filed the respective appeal, so the ruling is not yet final. The AIC also fined HECSA Th\$43 Argentine pesos (approximately ThCh\$3,051) for failure to submit required reports. On June 11, 2014, the company paid \$58.91 Argentine pesos (approximately ThCh\$4) in penalty interest on this fine.
- During 2013, the Electricity Regulatory Body (ENRE) imposed a fine of Th\$20 Argentine pesos (approximately ThCh\$1,419) on the company. HECSA has filed an appeal.
- From January 1, 2014 to March 31, 2014 the Electricity Regulatory Body (ENRE) imposed a fine of Th\$11 Argentine pesos (approximately ThCh\$781). The company has filed an appeal.
- Finally, from April 1, 2014 to June 30, 2014 the Electricity Regulatory Body (ENRE) imposed two fines amounting to Th\$3 Argentine pesos (approximately ThCh\$213).

6.- Endesa Costanera S.A.

- During the 2012 fiscal year and through to June 30, 2013, the company received two fines for a total amount of Th\$47,949 Argentine pesos (approximately ThCh\$3,402,299) from the General Customs Authority (*Dirección General de Aduanas*). Possible liability on the part of Mitsubishi is being assessed, in which case that amount could be claimed from this supplier. The ENRE also imposed two fines totaling Th\$51 Argentine pesos (approximately ThCh\$3,619). The company has filed an appeal.
- From April 1, 2014 to June 30, 2014 the Electricity Regulatory Body (ENRE) imposed a fine of Th\$40 Argentine pesos (approximately ThCh\$2,843), which was paid on June 30, 2014.

- Finally, from July 1, 2014 to December 31, 2014 the Electricity Regulatory Body (ENRE) imposed a fine of Th\$102 Argentine pesos (approximately ThCh\$7,238), which was paid on November 20, 2014.

7.- Central Dock Sud S.A.

- During 2013, Central Dock Sud S.A. (CDS) was fined \$794.11 Argentine pesos (approximately ThCh\$56) by the Electricity Regulatory Body (ENRE) as a generating company on the Argentine wholesale electricity market (*Mercado Eléctrico Mayorista* MEM), for failure to comply with Appendix 24 of The Procedures (Resolution ex-S.E. 61/92 and its amendments and additions) due to unavailability of Data Links on the Real-time Operating System (SOTR, its acronym in Spanish), during the period January to June 2012.
- On July 30, 2013 Central Dock Sud S.A. (CDS) was fined \$3,202.66 Argentine pesos (approximately ThCh\$227) by the Electricity Regulatory Body (ENRE), for failure to comply with Appendix 24 of The Procedures (Resolution ex-S.E. 61/92 and its amendments and additions) due to unavailability of Data Links on the Real-time Operating System (SOTR, its acronym in Spanish), during the period January to June 2013. The company paid the fine.
- From January 1, 2014 to June 30, 2014 Central Dock Sud S.A. (CDS) was fined \$5,516.57 Argentine pesos (approximately ThCh\$392) by the Electricity Regulatory Body (ENRE), for failure to comply with Appendix 24 of The Procedures (Resolution ex-S.E. 61/92 and its amendments and additions) due to unavailability of Data Links on the Real-time Operating System (SOTR, its acronym in Spanish), during the period July to December 2012. The company paid the fine.

8.- Yacylec S.A.

- During 2013 the Electricity Regulatory Body (ENRE) issued a penalty for transmission line down-time that was operated by Yacylec SA for \$584 Argentine pesos (approximately ThCh\$41) which was transferred to the independent carrier Yacylec SA by the high voltage transmission concessionaire, Transener SA and paid. During 2013 the Electricity Regulatory Body (ENRE) issued other penalties for transmission line down-time of Th\$7,843 Argentine pesos (approximately ThCh\$557) and reactor down-time of \$225,297 Argentine pesos (approximately ThCh\$15,986) regarding Yacylec SA facilities, but were not transferred by Transener SA for collection.
- During 2014, the Electricity Regulatory Body (ENRE) issued a penalty for transmission line down-time that was operated by Yacylec SA for Th\$5,601 Argentine pesos (approximately ThCh\$397) and reactor down-time operated by Yacylec SA for Th\$9,871 Argentine pesos (approximately ThCh\$700), which were not transferred by Transener SA for collection.

9.- Ampla Energía S.A.

- For the period ended December 31, 2012, the company received one fine for Th\$2,863 Brazilian reals (approximately ThCh\$653,989) from the National Electrical Energy Agency (*Agencia Nacional de Energía Eléctrica* ANEEL) for power consumption metering. In 2011, it received three fines totaling Th\$7,079 Brazilian reals (approximately ThCh\$1,617,041) for violation of telemarketing and energy sale tariff indicators. For the period ended December 31, 2012, Ampla was also fined Th\$7,478 Brazilian reals (approximately ThCh\$1,708,183) by the Federal Revenue Office (*Secretaria de Receita Federal*) for failure to meet tax obligations. The company has filed the respective appeals.
- The company received seven fines in 2013 totaling \$29,810,687 Brazilian reals (approximately ThCh\$6,809,591) from the National Electrical Energy Agency (*Agencia Nacional de Energía Eléctrica* ANEEL) due to problems with technical quality, erroneous evidence presented in inspections and for other reasons. The company appealed, and four fines are still awaiting final rulings. The other fines were either revoked or paid, for a total of \$143,601 Brazilian reals (approximately ThCh\$36,037). Only two fines were received in 2012 totaling \$3,557,786 Brazilian reals (approximately ThCh\$812,697), of which \$2,112,600 Brazilian reals (approximately ThCh\$530,159) have been paid.

- In 2013, the company received 19 fines totaling \$120,204 Brazilian reals* (approximately ThCh\$27,457) from the environmental agencies (IBAMA, *Instituto Brasileiro do Meio Ambiente e dos Recursos Naturais Renováveis*, ICMBio *Instituto Chico Mendes de Conservação da Biodiversidade*, INEA *Instituto Estadual de Ambiente* and others) for unauthorized removal of vegetation, the death of animals through contact with the energy network, and construction in prohibited areas or without permission. The company filed appeals against almost all of the fines assessed, but no ruling has yet been given. Ampla has paid \$66,310 Brazilian reals in fines (approximately ThCh\$16,641). The company had received 14 fines in 2012 for a total of \$76,426 Brazilian reals (approximately ThCh\$17,457).
 - (*) Clarification: The amount of some of the fines has not yet been determined; the amounts will be set after Ampla submits certain data.
- In 2013, the company received four fines totaling \$24,234 Brazilian reals (approximately ThCh\$5,535) from the Consumer Defense and Protection Agency (PROCON/RJ) due to problems in reimbursing improper charges and other irregularities. The company has filed appeals against all of the fines, and rulings are pending. Ampla had received three fines in 2012 for a total of \$20,840 Brazilian reals (approximately ThCh\$4,760); rulings on the appeals filed by the company against these sanctions are also pending.
- The company received one fine in 2013 from the employee defense agencies (SRTE) due to problems with formalities. The company filed an appeal, and the ruling is pending. The labor agencies have not specified the amount of the fine, which it does only after analyzing the appeal. Ampla had received five fines in 2012, for which rulings are also pending after appeals filed by the company.
- In 2014, the company received two fines from the National Electrical Energy Agency (ANEEL) for technical quality, totaling €6,759,518 (approximately ThCh\$4,983,770). The company has appealed, and one was rejected, while the other is still pending resolution. Ampla has paid €1,202,986 (approximately ThCh\$886,957). In 2013, Ampla was fined 7 times for service quality totaling €9,368,747 (approximately ThCh\$6,907,545), and has paid €843,869 (approximately ThCh\$622,181). There are two appeals pending, which were filed by Ampla against the 2013 fines.
- The company received 15 fines in 2014 totaling €80,263* (approximately ThCh\$59,177) from the environmental agencies (ICMBio, *Instituto Chico Mendes de Conservação da Biodiversidade* and the INEA, *Instituto Estadual de Medioambiente* y *órgano municipal del medioambiente*) for unauthorized suppression of vegetation, the death of animals that have come in contact with the power network, waste dumping and power network construction in prohibited or unauthorized areas. The company has appealed almost all of the fines assessed, but no rulings have been handed down as yet. Ampla has paid €460 in fines. The company received 19 fines in 2013 totaling €35,940* (approximately ThCh\$26,498) from the environmental agencies for the same violations as in 2014. The company filed appeals against almost all of the fines received, but no rulings have been handed down as yet. Ampla paid three fines totaling €19,826 (approximately ThCh\$14,617) in 2013.
 - (*) Clarification: The amount of some of the fines has not yet been determined; the amounts will be set after Ampla submits certain data.
- Ampla has received 14 fines in 2014 totaling €665,565 (approximately ThCh\$490,718) from the Brazilian Consumer Defense and Protection Agency (*Autarquía de Defensa a Protección del Consumidor*, PROCON/RJ) for problems with the quality of its power supply. It has appealed against the fines, Only one appeal has been resolved, and Ampla has paid €1,958 (approximately ThCh\$1,443). It received four fines totaling €7,616 (approximately ThCh\$5,615) in 2013, for which appeals filed by Ampla also remain pending.

- In 2014, the company received four fines from the employee defense agencies (SRTE) against which it has filed administrative appeals. An appeal was rejected and Ampla has paid the amount of €61.74 (approximately ThCh\$46); the others have not yet received rulings. In 2013, Ampla received one fine for €641 which has already been paid.

10.- Coelce

- For the period ended December 31, 2012, the company received two fines totaling Th\$689 Brazilian reals (approximately ThCh\$157,387) from the National Electrical Energy Agency (ANEEL) for failure to comply with technical regulations.
- In 2013, the company received 32 fines totaling \$34,877,282 Brazilian reals (approximately ThCh\$7,966,942) from the National Electrical Energy Agency (ANEEL) or its local representative (ARCE) for accidents with third parties (there were seven), problems with technical quality, erroneous evidence submitted in inspections, irregularities with the Coelce Plus project, and other reasons. The company has filed appeals, and final decisions are pending on 26 sanctions. The other fines were either revoked or paid, for a total of \$395,125 Brazilian reals (approximately ThCh\$90,257). Coelce had received 24 fines totaling Th\$53,810,352 Brazilian reals in 2012 (approximately ThCh\$12,291,781), of which \$707,423 Brazilian reals (approximately ThCh\$177,529) have been paid; the final decision on 16 of the fines is pending.
- The company was not fined by the environmental agencies in 2014 and 2013 (IBAMA, *Instituto Brasileiro do Meio Ambiente e dos Recursos Naturals Renováveis*, and ICMBio, *Instituto Chico Mendes de Conservação da Biodiversidade*).
- Coelce received four fines in 2013 totaling \$21,837 Brazilian reals (approximately ThCh\$4,988) from the Consumer Defense and Protection Agency (PROCON/CE) for alleged violations of consumer rights. The company filed appeals against the fines, and one has yet to be resolved. The other appeals were rejected, and Coelce paid \$15,901 Brazilian reals (approximately ThCh\$3,990) in fines. Two fines for a total of \$12,953 Brazilian reals (approximately ThCh\$3,251) were received in 2012, which have been paid.
- The company received two fines in 2013 from the employee defense agencies (SRTE) due to problems with formalities. The appeal filed by the company was unsuccessful, and the amount of \$9,694 Brazilian reals (approximately ThCh\$2,433) was paid. The company was not fined by these agencies in 2012.
- The company has received eight fines in 2014 totaling €8,702,775 (approximately ThCh\$6,416,527) from the National Electrical Energy Agency (ANEEL) or its local representative (ARCE) for accidents with third parties among the population, technical quality and errors in the asset base. Coelce has paid €16,319 for one of the fines, and has appealed against the rest. The company received 32 fines from ANEEL or ARCE in 2013 totaling €10,938,249 (approximately ThCh\$8,064,734) for accidents with third parties among the population (there were seven), problems with technical quality, erroneous evidence presented during inspections, irregularities with the Coelce Plus Project and other reasons. The company filed appeals, of which 17 are still pending the final ruling. The other fines were either revoked or paid, for a total of €1,418,561 (approximately ThCh\$1,045,900).
- In 2014 the company received four fines in 2014 from the Brazilian Consumer Defense and Protection Agency (PROCON/CE), amounting to €24,743 (approximately ThCh\$18,242), for alleged missed deadlines and damage to equipment. Coelce has filed three administrative appeals and paid one fine for €933. The company received four fines in 2013 from PROCON/CE totaling €7,220 (approximately ThCh\$5,323) for allegedly violating consumers' rights. The company filed appeals against the fines without success and Coelce has paid the fines.
- The company received six violation notifications from the employee defense agencies (SRTE) in 2014, for accidents suffered by workers. It received two fines in 2013 from the SRTE for failure to comply with formalities. Coelce paid €3,206 (approximately ThCh\$2,363) for the 2013 fines.

11.-Cien

- The company received one fine in 2013 for \$32,136 Brazilian reals (approximately ThCh\$7,340) from the National Electrical Energy Agency (ANEEL) for a formality (a failure to submit documentation). The company appealed, and the decision is pending. The company was not fined by this agency in 2012.
- The company has not been fined for other matters in 2012 and 2013 (environmental, consumer or labor).
- Cien has not been fined by the National Electrical Energy Agency (ANEEL) or by any other supervisory agency in 2014. In 2013, the company received one fine from the National Electrical Energy Agency (ANEEL) for €10,100 (approximately ThCh\$7,446) for a formality (a failure to present documentation). Cien filed an appeal, which was accepted, and the fine was cancelled by the judicial body.
- In 2014, the company received two fines from the employee defense agencies (SRTE) and the company has filed appeals against them. Cien has paid a fine of €61.74 (approximately Ch\$45,521) and the appeal against the other fine has not yet been tried. In 2013, the company was not fined.
- The company has not been fined for other matters in 2013 and 2014 (environmental or labor).

12.- Edelnor S.A.A.

- In 2012, Edelnor S.A.A. was fined by the Peruvian Tax Administration (SUNAT) for 2007 and 2008 income tax assessments. The restated value of the fines at December 31, 2014 was S/19,748,961 (approximately ThCh\$4,008,927). The appeals filed are pending resolution by the Tax Court.
- During the 2012 fiscal year, OSINERGMIN (Supervisory Agency for Investments in Energy and Mining) imposed 19 fines on Edelnor S.A.A. for S/463,646.77 (approximately ThCh\$94,117) for failure to comply with technical and commercial quality standards. In 2011, it imposed 47 fines for a total of S/717,000 (approximately ThCh\$145,546).
- In February 2013, Edelnor S.A.A. paid a fine of S/1,861.63 (approximately ThCh\$340) to SUNAT for failure to pay IGV (Peru's value added tax) on time.
- During the 2013 fiscal year, OSINERGMIN imposed 23 fines totaling S/2,544,177.91 (approximately ThCh\$516,453) on Edelnor S.A.A. for alleged failure to comply with technical and commercial standards.
- In October 2013, Edelnor SAA was fined by the SUNAT for 2009 income tax assessments. On appeal, a partially favorable result was obtained, so the updated value of the fine became S/4,150,479 (approximately ThCh\$859,976), which was paid by Edelnor SAA on September 8, 2014, after applying a rebate. Nonetheless, Edelnor SAA filed an appeal, which is pending.
- During 2014, OSINERGMIN imposed 22 fines on Edelnor S.A.A. totaling S/2,015,383 (approximately ThCh\$409,111) for failure to comply with technical and commercial regulations.
- Edelnor S.A.A. was fined in June 2014 by the Municipality of Huaral for an alleged omission in the calculation of property tax (*impusto predial*) for the years 2010 to 2014. The amount of the fine, restated at December 31, 2014, was S/48,831 (approximately ThCh\$9,912). Edelnor S.A.A. has appealed against the fine, and a resolution is pending.

13.- Edegel S.A.A.

- In April 2011, Edegel S.A.A. was fined by SUNAT (the Peruvian Tax Administration) for issues with the calculation of its 2006 income tax. The amount of the fines, restated at December 31, 2014, was S/10,162,561 (approximately ThCh\$2,062,942). The company has filed an appeal, which is pending resolution by the Tax Court.

- In February 2012, the SUNAT ordered Edegel S.A.A. to pay S/.38,433,190.24 (ThCh\$7,597,565) for omitted taxes plus interest and penalties in connection with an audit of its 1999 income tax that began in January of 2006. Edegel S.A.A. paid the penalty imposed by the SUNAT and filed an administrative claim disputing the assessment; a decision on the claim is pending.
- In August 2012, Edegel S.A.A. received a fine for a total of S/.18,250 (5 Tax Units, UIT, or approximately ThCh\$3,704) from the Agency for the Supervision of Investment in Energy and Mining (OSINERGMIN) for the following violations: (i) CCIT violations: incorrectly calculating indicators and the compensation amount for voltage quality in the first half of 2011; (ii) not having met the deadline for submitting information on product quality for the same period; and (iii) having submitted empty RDI and RIN extension files.
- In April 2013, Edegel S.A.A. received the following fines by the OSINERGMIN: (i) S/.7,604.57 (approximately ThCh\$1,391) for failure to perform maintenance in a timely fashion on its thermal generation units for the last quarter of 2008; (ii) S/.200,941.48 (approximately ThCh\$40,789) for failure to perform maintenance in a timely fashion on its hydraulic generation units for the last quarter of 2008; (iii) S/40,700 (approximately ThCh\$8,261) (11 Tax Units, UIT) for failure to submit technical justification in a timely fashion for the second quarter of 2008; and (iv) S/.106,073.17 (approximately ThCh\$19,404) for failure to have its generation unit available after having been notified that it was required by the SEIN for the fourth quarter of 2008.

Edegel SAA has not challenged the fines (i) and (iv), and on May 2, 2013, paid them to obtain prompt payment benefits. However, by appeal, Edegel SAA has challenged the fines (ii) and (iii). The Court of Appeals for Energy and Mining Sanctions for OSINERGMIN, through Resolution No. 107-2014-OS/TASTEM-S1 notified Edegel SAA on April 15, 2014, that the General Management Resolution imposing the fine was invalid, because the appropriate body was Electrical Oversight Division at OSINERGMIN.

Therefore, on September 1, 2014, Edegel SAA was notified by Resolution No. 1380-2014 of the Electrical Oversight Division at OSINERGMIN, of the same fines contained in the General Management Resolution. In response, Edegel SAA has resubmitted the appeal, noting that sanctions (i) and (iv) were already paid.

- In May 2013, Edegel S.A.A. was fined by the SUNAT for issues with its 2007 tax assessment. The amount of the fine, restated at December 31, 2014, was S/.9,384,971 (approximately ThCh\$1,905,095). An appeal filed with the Tax Court is pending.
- In June 2013, Edegel S.A.A. was notified by Electroperú S.A. of a penalty applied under contract no. 132991, "Additional Generation Capacity Service through Conversion of Equipment to the Dual Generation System." The penalty, amounting to S/.481,104.53 (approximately ThCh\$97,661), was applied for breach of the conditions for executing the service offered under that contract.
- In July 2013, Edegel S.A.A. was fined S/.453.86 (approximately ThCh\$90) by the OSINERGMIN) for failure to perform maintenance on its hydraulic generation units in a timely fashion as required under number 6, "Procedure for Overseeing Availability and the Operating Conditions of SEIN Generating Units." As the company paid the fine prior to the 15-day deadline, the fine was reduced to S/340.4 (approximately ThCh\$67).
- In July 2013, Edegel S.A.A. was fined S/4,070 (approximately ThCh\$805) by the OSINERGMIN for failure to submit the pertinent technical justification in a timely fashion as required under number 6 of the "Procedures for Overseeing Availability and the Operating Conditions of SEIN Generating Units." As the company paid the fine prior to the 15-day deadline, the fine was reduced to S/3,052.50 (approximately ThCh\$603).
- In November 2013, Edegel S.A.A. was fined S/37,000 (approximately ThCh\$7,510 or 10 Tax Units UIT) by the Callahuanca District Municipality (MDC) in Municipal Resolution 060-2013. The MDC imposed the fine for failure to submit the technical inspection report on multidisciplinary civil defense safety as required under Law 29664 and its regulations.

- In November 2013, Edegel S.A.A. was fined by the SUNAT for issues with its 2008 tax assessment. The amount of the fine, restated at December 31, 2014, was S/1,695,331 (approximately ThCh\$344,142). The appeal filed is pending resolution by the SUNAT.
- In December 2013, Scotiabank Perú S.A.A., with whom Edegel S.A.A. has signed a lease agreement for the Santa Rosa Project, was fined by the SUNAT for duties allegedly unpaid in an import operation. The amount of the fine, restated at December 31, 2014, was S/13,515.23 (approximately ThCh\$2,743). Scotiabank Perú S.A.A. filed the respective appeal in January 2014.
- In May 2014, Electrical Oversight Division Resolution No. 743-2014 issued by the OSINERGMIN on May 27, 2014, notified Edegel S.A. of a fine of 0.50 tax units (UIT) for having violated the CCIT indicator, regarding compliance with the correct calculation of indicators and compensation amounts for voltage quality, in the second half of 2012. The fine was imposed in accordance with number 5.1.2, section B) of the Procedures for Supervising the Technical Standards for Electricity Service Quality and their Methodology Base.
- In June 2014, Edegel SAA corrected an omission in its 2009 Income Tax following an assessment and paid the associated fine of S/.2,070 (approximately ThCh\$409).
- In September 2014, Edegel SAA was fined by the SUNAT for issues with its 2009 tax assessment for an amount updated at September 30, 2014 of S/.315,230 (approximately ThCh\$65,315). The fine has been accepted and paid by Edegel.

14.- Empresa Eléctrica de Piura S.A.

- In October 2011, Empresa Eléctrica de Piura S.A. was fined by the SUNAT for issues with its 2008 income tax assessment. The amount of the fine, restated at December 31, 2014, was S/32,786 (approximately ThCh\$6,655). The appeal filed is pending resolution by the Tax Court.
- In September 2012, Empresa Eléctrica de Piura S.A. was fined by the SUNAT for issues with its 2008 income tax assessment for parities not domiciled in Peru. The amount of the fine, restated at December 31, 2014, was S/264,732 (approximately ThCh\$53,739). The appeal filed is pending resolution by the Tax Court.
- In November 2012, Empresa Eléctrica de Piura S.A. was fined S/13,140 (approximately ThCh\$2,598) (3.60 Tax Units UIT) by the Supervisory Agency for Investments in Energy and Mines (OSINERGMIN) for the following infractions: (i) failure to comply with the requirements of Article 49 of the Regulations for Sales of Liquid Fuels and other Hydrocarbon Products (approved in Supreme Decree 045-2011-EM) and Article 59 of the Regulations for Safe Hydrocarbon Storage (approved in Supreme Decree 052-93-EM), and (ii) presenting false information in Sworn Statement 967-19681-20111018-102524-74 regarding questions 2.1 and 2.10 of the questionnaire applicable to direct consumers of liquid fuels. The fine was paid.
- In February 2013, Empresa Eléctrica de Piura S.A. was fined S/7,005 (approximately ThCh\$1,385) relating to regulatory payments for the years 2004 and 2005. The fine was paid.
- In August 2013, Empresa Eléctrica de Piura S.A. was fined S/15,873 (approximately ThCh\$2,877 or 5.72 Tax Units UIT) by the OSINERGMIN for the following violations of the Procedure for Overseeing Technical Quality Standards for Electrical Services and its Base Methodology ("NTCSE"): (i) having violated the CMRT indicator regarding compliance with measurements required under the NTCSE based on voltage measurements reported for the second half of 2011; and (ii) having violated the CCII indicator regarding correctly calculating indicators and compensation amounts from service interruptions in the second half of 2011. The fine was paid in September 2013.

- In August 2013, Empresa Eléctrica de Piura S.A. was notified by the Ministry of Energy and Mines of a penalty of S/691,500 (approximately ThCh\$140,370) imposed under the "Talara Plant Cold Reserve Contract (CT Malacas3)" due to delays in the commercial startup of the Talara Cold Reserve Generation Plant.
- In September 2013, Empresa Eléctrica de Piura S.A. learned of Resolution No. 1 issued by Coactive Executor OSINERGMIN applying a penalty of 42.17 UIT, equivalent to S/156,029 (approximately ThCh\$31,673) for failure to hold average stocks of LPG during the months of January, February, March, April, May, and June 2004. On October 21, the Coactive Executor suspended the Coactive Execution proceedings for collection on the fine.
- On September 24, 2013, Empresa Eléctrica de Piura S.A. was fined S/3,700 (approximately ThCh\$731 or 1 Tax Unit UIT) by the OSINERGMIN because EDAGSF was not declared in the Extranet System in F08 format, violating the Procedure for Overseeing Implementation and Operation of the Systems for Automatic Rejection of Generation Loads. As the fine was paid within fifteen (15) days of notification, it was reduced by 25% to S/2,775 (approximately ThCh\$549).
- Banco de Credito del Peru SA signed a lease with Empresa Electrica de Piura SA which referred to the Expansion Project at Thermal Electric Plant Malacas TG5. The Bank was fined in November 2014 by the SUNAT for allegedly unpaid taxes on imports for an amount updated on December 31, 2014 of S/.13,849,761 (approximately ThCh\$2,811). Banco de Credito del Peru SA filed the respective appeal in December 2014.

15.- Chinango S.A.C.

- In October 2010, Chinango was fined by the District Municipality of San Ramón regarding the Alcabala tax imposed on the transfer of certain assets in the Simple Reorganization that took place between Edegel S.A.A. and Chinango S.A.C. and which went into effect on May 31, 2009. The amount of the fine, restated at December 31, 2014, was S/1,786,533 (approximately ThCh\$362,656). The appeal filed is pending resolution.
- In May 2012, Chinango S.A.C. received a fine totaling S/40,150 (approximately ThCh\$7,937 or 11 Taxation Units, UIT) from the Supervisory Agency for Investments in Energy and Mining (OSINERGMIN) for the following violations: (i) failure to meet the deadline for submitting information on product quality in NTCSE source files; and (ii) having submitted RIN and CI1 files with errors (incorrect information) in accordance with the Electricity Concessions Law. The fine was paid.
- In August 2012, Chinango S.A.C. received a fine totaling S/18,250 (approximately ThCh\$3,608 or five Taxation Units, UIT) from the Supervisory Agency for Investments in Energy and Mining (OSINERGMIN) for the following violations: (i) CCIT indicator violations; (ii) failure to submit information in a timely fashion; and (iii) having submitted two empty RIN and RD files. The fine was paid.
- In August 2012, Chinango S.A.C. received a fine totaling S/29,200 (approximately ThCh\$5,772 or eight Taxation Units, UIT) from the Appeals and Sanctions Court of the Agency for the Supervision of Investment in Energy and Mining (OSINERGMIN) when it ruled as groundless the appeal filed by Chinango S.A.C. against Executive Management Resolution No. 014801 penalizing the failure to comply with the "Procedure for Overseeing the Technical Quality Standard for Electricity Services and its Base Methodology" (NTCSE) in the first half of 2010 and confirmed the Resolution in all of its details. The fine was paid.
- In January 2013, Chinango S.A.C. received a fine totaling S/367,915 (approximately ThCh\$76,232) from the SUNAT for issues with the determination of its 2010 income tax. The company challenged the measure despite paying a reduced fine in February 2013. The appeal filed is pending resolution by the Tax Court.

- In June 2013, Chinango S.A.C. was notified through Coactive Execution Resolution 0398-2012 of a fine of S/3,800 (approximately ThCh\$771) imposed by the Supervisory Agency for Investments in Energy and Mines (OSINERGMIN) for the following infractions: (i) failure to comply with the CCII indicator in the first half of 2010 as required under paragraph A of number 5.2.2 of the "Procedure for Overseeing the Technical Quality Standard for Electrical Services and its Base Methodology"; (ii) failure to comply with the CPCI indicator in the first half of 2010 as required under paragraph C) of number 5.2.2 of the "Procedure for Overseeing the Technical Quality Standard for Electrical Services and its Base Methodology"; and (iii) submitting empty service interruption reports (RIN and RDI files) for the first half of 2010 despite the interruptions affecting its customers, as required under Article 31 of the Electricity Concession Law.
- In September 2013, Chinango S.A.C. was notified through Electrical Oversight Division Resolution No. 19693 issued by the Supervisory Agency for Investments in Energy and Mining (OSINERGMIN) of a fine of S/1,850 (approximately ThCh\$366 or 0.50 Tax Units UIT) for: (i) failure to submit voltage quality information in a timely fashion in the first half of 2012. As the fine was paid within fifteen (15) days of notification, it was reduced by 25%.
- In March 2014, Chinango S.A.C. was notified through Coactive Execution Resolution No. 0350-2014 that it must pay a balance of S/12,100 (approximately \$2,456) on a fine imposed by the OSINERGMIN. The total amount of the fine, imposed through sanction No. 014799-2012-OS/CG, was 11 tax units (UIT) or S/48,800 (approximately ThCh\$9,906).
- In January 2014, Chinango S.A.C. was fined by the SUNAT for issues with its 2011 income tax assessment in the amount of S/.613.390 (approximately ThCh\$122,542), that was paid in February 2014 using a rebate system and without prejudice to the respective appeal. The filed appeal was resolved against Chinango SAC by the SUNAT resolution notified in December 2014, against which Chinango SAC lodged the respective appeal.

16.- Emgesa

- In a Resolution dated August 10, 2012, the Colombian Institute of Anthropology and History—ICANH—imposed a fine of 200 minimum monthly legal salaries of CP 113,340,000 Colombian Pesos (approximately ThCh\$28,744) on the company for not complying with standards and established procedures in cases of archaeological findings. This occurred between April 3 and April 6, 2011 in the area of the El Quimbo Hydroelectric Project. Emgesa filed an appeal against the resolution, but ICANH confirmed the fine in Resolution 149 of October 22, 2012.

17.- Codensa

- The Superintendency of Public Household Services imposed the following fines on Codensa: 1) In Resolution 20112400025515 of September 5, 2011, it fined the company CP41,200,000 Colombian pesos (approximately ThCh\$10,449) for erroneously cutting off electricity for failure to make installment payments for use of financial services, interest payment Codensa Hogar; 2) in Resolution 20112400029265 of October 18, 2011, it fined the company CP26,780,000 Colombian pesos (approximately ThCh\$6,971) for erroneously cutting off the client's electricity after the financial service had been paid in the financial company's offices.
- In 2012, the Superintendency of Public Household Services imposed the following fines on Codensa: 1) In Resolution 20122400001045 of January 30, 2012, a fine for CP21,424,000 Colombian pesos (approximately ThCh\$5,433) for violating the tariff system by erroneously calculating the unit cost for the periods November-December 2009 and January-February 2010 due to an error in the information on ownership of the asset; 2) in Resolution 20122400022555 of July 17, 2012, the Superintendency imposed a fine of CP45,336,000 Colombian pesos (approximately ThCh\$11,497) on Codensa for failure to comply with number 6.2.3 of the Appendix to CREG General Resolution 070, amended by CREG Resolution 096 of 2000.

- In April 2012, Codensa paid a penalty of CP32,207,414 Colombian pesos (approximately ThCh\$8,168) applied by the Industry and Commerce Superintendency in accordance with Resolution 1792 of January 26, 2011 for violation of the personal data protection regulations contained in Law 1266 of 2008.
- On June 5, 2012 the SSPD imposed a fine on Codensa for CP13,558,500 Colombian pesos (approximately ThCh\$3,438) by means of Resolution No. 20142400025295 for breach of the provisions of Resolution 097 of 2008, since it had not obtained the certificate issued by the respective auditor, to begin the incentives and compensation scheme before April 6, 2010. After exhausting the appeals before the SSPD, further appeals will be filed before the Administrative Courts.
- In 2013, as a result of a claim filed by the company Tubotec S.A.S., the Superintendency of Public Household Services applied a penalty of CP167,743,200 Colombian pesos (approximately ThCh\$42,541) on Codensa for failure to comply with capacity quality indicators.
- In November 2013, Codensa paid a fine of CP22,668,000 Colombian pesos (approximately ThCh\$6,214) imposed by the Consumer Protection Investigation Bureau of the Industry and Commerce Superintendency in accordance with Resolution 57393 of September 30, 2013. The penalty was due to an error made by the company's invoicing service for having erroneously collected on a loan from a claimant who reported the mistake on several occasions.
- In March 2014, the Superintendency of Public Household Services (SSPD) fined Codensa CP77,814,500 Colombian pesos (approximately ThCh\$19,734) for failure to comply with operating regulations regarding TAPS maneuver time. The SSPD confirmed the sanction in Resolution 2014240005655 of March 7, 2014, stating that Codensa S.A. E.S.P. violated the operating regulation by exceeding the maximum time permitted. Having exhausted the appeals before the SSPD, a further appeal has been filed before the Administrative Courts.
- In March 2014, the Superintendency of Public Household Services (SSPD) fined Codensa CP127,332,000 Colombian pesos (approximately US\$32,292) for a failure in the DES service-non-compliance indicator. The fine was imposed through Resolution 2014240005125 of March 5, 2014 after the company failed to provide continuous public electricity service when it exceeded the maximum DES limits as established in Article 136 of Law 142 of 1994 and number 6.3.4 of CREG Resolution 070 of 1998. Having exhausted the appeals before the SSPD, a further appeal has been filed before the Administrative Courts.

18.- Sociedad Portuaria Central Cartagena (SPCC)

- The Port and Transportation Superintendency, through Resolution 1312 of January 30, 2014, fined SPCC CP2,142,400 Colombian pesos (approximately ThCh\$583) for reporting accounting and financial information for the 2010 year at the improper time. Resolutions 6051 of 2007 and 759 of 2010 required that this information be provided in February of 2011. The fine was paid on February 14, 2014.

b) Joint Ventures

1.-Transquillota

- During the 2012 fiscal year, the company Transquillota, in which Endesa Chile and Colbún each hold a 50% stake, was audited by the Chilean tax service (SII) under an expense verification program, as the SII considers that certain entries such as depreciation of fixed assets were not properly handled. An administrative reconsideration for the Supervisory Review (RAF) was submitted explaining the differences. The SII accepted the company's explanations and reduced the interest and fines payable to ThCh\$19,208, which the company paid on March 27, 2013. Endesa paid only 50% of the amount, or Thch\$9,604.
- Closed and paid.

The Company and its Board of Directors have not received other fines from the SVS nor from other administrative authorities.

39. ENVIRONMENT

Environmental expenses as of December 31, 2014, 2013 and 2012 are as follows:

Company Incurring the Cost	Project	12-31-2014 ThCh\$	12-31-2013 ThCh\$	12-31-2012 ThCh\$
Endesa Chile S.A.	Studies, monitoring, laboratory analysis, removal and final disposal of solid waste at hydroelectric power stations (HPS) and thermoelectric power stations.	1,894,105	1,996,818	2,298,344
Chinango	Air and climate protection, waste water management, soil and water recovery, noise and vibration reduction, biodiversity and landscape protection.	-	-	451,030

41. SUBSEQUENT EVENTS

ENERSIS

- On January 20, 2015, the following subsequent event was reported:

On January 20, 2015, the General Manager, Mr Luigi Ferraris, submitted his resignation by letter to the Chairman of the Board of Directors. His resignation was for family reasons and will take effect from January 29, 2015. A replacement will be appointed at the next Board meeting.

These reports were requested by the above-mentioned Company bodies, due to a possible transaction between related parties, hereinafter the Transaction.

- A subsequent event was recorded on January 29, 2015, reporting that at a meeting of the Board on January 29, 2015 the Board unanimously agreed to appoint Mr. Luca D'Agnese as General Manager of the Company, to replace Mr Luigi Ferraris, who resigned on January 20, 2015, as had been reported as a essential event on that date.
- At a meeting of the Board on January 29, 2015 the Board unanimously agreed to report subsequent events as follows:

a.- Evaluation of the Hydroaysen Project.

In May 2014, the Committee of Ministers reversed the Environmental Qualification Resolution (*Resolución de Calificación Ambiental* - RCA) for the Hydroaysen project in which our subsidiary Endesa Chile is involved. As it is publically known, this decision has been appealed against at courts in Valdivia and Santiago. Centrales Hidroeléctricas de Aysén S.A. (hereinafter "Hydroaysen") applied for water rights in 2008. On January 28, 2015 it became known that these had been partially denied.

Our subsidiary Endesa Chile has expressed its desire to defend the water rights and the environmental approval awarded to the Hydroaysen project in the appropriate manner, continuing the lawsuits already started or initiating new administrative or judicial actions as may be necessary to achieve this purpose, and remains convinced that the water resources of the Aysén region are important for the development of the country's energy sector.

However, there is now a degree of uncertainty about the recoverability of the investment already made in Hydroaysen. It heavily depends on judicial decisions and political opinions regarding energy issues that are difficult to anticipate, so this investment is not in the immediate project portfolio of Endesa. As a result, our subsidiary Endesa Chile has decided to record an impairment provision for its stake in Hidroaysen S. A. of ThCh\$69,066,857 (approximately US\$121 million), which affects the net income of Endesa Chile for the fiscal year 2014.

The effect of the impairment provision at Endesa Chile for its stake in Hidroaysen will be to reduce the net income of Enersis by ThCh\$41,426,000 (approximately US\$73 million).

b.- Evaluation of the Punta Alcalde Project.

The Punta Alcalde Project at our subsidiary Endesa Chile has RCA approval for this generation project (ratified subject to conditions by the Supreme Court in January 2014). The approval of the Environmental Impact Study (*Estudio de Impacto Ambiental* - EIA) associated with the transmission line is required, to complete the environmental processing. This is currently in progress.

The engineering team at Endesa Chile, with the support of coal technology experts, have studied the possibilities of adapting Punta Alcalde to make it a profitable project and technologically more sustainable. The conclusion reached is that these adaptations would involve major amendments to the approved RCA that would be difficult to process.

Therefore, our subsidiary Endesa Chile has decided to halt the development of the Punta Alcalde Project and the associated transmission project Punta Alcalde-Maitencillo. While it waits to dispel the uncertainty regarding the profitability, provisions are being taken for the value of unrecoverable assets.

The financial and accounting effects of the impairment provision at Endesa Chile regarding the Punta Alcalde Project will be to reduce its net income due to unrecoverable assets by ThCh\$12,582,000 before tax (approximately US\$22 million), with a reduction in the net income of Enersis for the fiscal year 2014 by ThCh\$5,509,000 (approximately US\$10 million).

c.- Transaction with Consortium SES - Tecnimont.

The Board of Directors of our subsidiary, Endesa Chile has accepted and approved a document called the "Conditional Transaction, Termination and Cancellation", hereinafter referred to as the Transaction. In this agreement Endesa Chile and the companies Ingeniería y Construcción Tecnimont Chile y Compañía Limitada; Tecnimont SpA; Tecnimont do Brasil Construcao e Administracao de Projetos Ltda.; Slovenske Energeticke Strojarne a.s.("SES"); e "Ingeniería y Construcción SES Chile Limitada", hereinafter collectively called the "Consortium" terminated the arbitration initiated by Endesa Chile before the International Court of Arbitration of the International Chamber of Commerce (ICC) in relation to the fulfilment of obligations agreed by the Consortium under the Bocamina Thermoelectric Plant Extension Project Contract (Contrato Proyecto Ampliación Central Térmica Bocamina) and a broad mutual settlement for liabilities under the contract were agreed. The Endesa Chile Board approval of the Transaction is subject to the proper and timely fulfilment the preceding conditions agreed in this instrument, which include that each and every Board and/or governing body of the companies that make up the Consortium have accepted and expressly approved all the terms of the Transaction and all its elements in their essence and nature, including those that are merely incidental.

The effect of the Transaction for Enersis is the recognition of an increase in capital expenditures of US\$125 million.

- **d.-** In its session held on April 22, 2015, Enersis' Board of Directors has been informed of a significant event released as of the same date by our parent company, Enel, in which it refers to the convening of the Boards of Directors of Enersis, Endesa Chile and Chilectra to begin the process of assessing a potential corporate reorganization to separate electricity generation and distribution activities and assets in Chile from those in Argentina, Brazil, Colombia and Peru.
- **e.-** At the OSM held on April 28, 2015, a new Board of Directors was elected for a period of three years starting from the date of the meeting. The members of our new Board of Directors are: Jorge Rosenblut, Francesco Starace, Francesca Di Carlo, Alberto De Paoli, Hernán Somervielle S., Carolina Schmidt Z., Rafael Fernández M.

At the Board of Directors meeting held on April 28, 2015, our new Board of Directors agreed to appoint Mr. Jorge Rosenblut as Chairman of the Board of Directors, and Mr. Francesco Starace as the Vice Chairman. At the same meeting, it was agreed to appoint Mr. Hernán Somervielle S., Ms. Carolina Schmidt Z. and Mr. Rafael Fernández M. as members of the Directors' Committee. Additionally, Mr. Hernán Somervielle S. was appointed as the Directors' Committee's Financial Expert.

ENDESA

- **a.-** On January 9, 2015 Empresa Nacional de Electricidad S.A. and its subsidiary Compañía Eléctrica de Tarapacá S.A sold all its shares in Sociedad Concesionaria Túnel El melón S.A. to Temsa Fondo de Inversión Privado. The price of the transaction was ThCh\$25,000,000 and as a result the Endesa Group Chile will recognize a net gain of approximately ThCh\$4,207,150 in 2015.
- **b.-** In May 2014 the Committee of Ministers reversed the RCA approval for the Hydroaysen project. As is publically known, this decision has been appealed against at courts in Valdivia and Santiago. Centrales Hidroeléctricas de Aysén S.A. (hereinafter "Hydroaysen") applied for water rights in 2008. On January 28, 2015 Endesa Chile discovered that these had been partially denied.

Endesa Chile has expressed its desire to defend the water rights and the environmental approval awarded to the project in the appropriate manner, continuing the lawsuits already started or initiating new administrative or judicial actions as may be necessary to achieve this purpose. Endesa Chile remains convinced that the water resources of the Aysén region are important for the country's energy sector development.

However, there is now a degree of uncertainty about the recoverability of the investment already made in Hydroaysen. It heavily depends on judicial decisions and political opinions regarding energy issues that are difficult to anticipate. The project is not in the immediate project portfolio of Endesa.

As a result, the company has decided to record an impairment provision for its stake in Hidroaysen S. A. of ThCh\$69,066,857 (approximately US\$121 million), which affects the net income of the company for the fiscal year 2014.

c.- The Punta Alcalde Project has RCA approval for this generation project (ratified subject to conditions by the Supreme Court in January 2014). The approval of the Environmental Impact Study ((*Estudio de Impacto Ambiental -* EIA)) associated with the transmission line is required, to complete the environmental processing.

The engineering team at Endesa Chile, with the support of our coal technology experts, have studied the possibilities of adapting Punta Alcalde to make it a profitable project and technologically more sustainable. The conclusion reached is that these adaptations would involve major amendments to the approved RCA that would be difficult to process.

Therefore, the company has decided to halt the development of the Punta Alcalde Project and the associated transmission project Punta Alcalde-Maitencillo. While it waits to dispel the uncertainty regarding the profitability, provisions are being taken for the value of unrecoverable assets.

As a result, the company has decided to record an impairment provision for the project of ThCh\$12,582,000 (approximately US\$22 million), which reduces the net income of the company for the fiscal year 2014 by ThCh\$9,184,000.

d.- As described in Note 17. d) v), on October 17, 2012 Endesa Chile brought before the International Court of Arbitration of the International Chamber of Commerce (ICC), hereinafter referred to as the Court, a request for arbitration against the Chilean company "Ingeniería y Construcción Tecnimont Chile y Compañía Limitada"; the Italian company "Tecnimont SpA"; the Brazilian company "Tecnimont do Brasil Construcao e Administracao de Projetos Ltda."; the Slovak company "Slovenske Energeticke Strojarne a.s." ("SES"); and the Chilean company "Ingeniería y Construcción SES Chile Limitada", hereinafter collectively referred to as "the Consortium", with the purpose of demanding the full and timely implementation of the obligations agreed by the consortium under the Bocamina Thermoelectric Plant Extension Project Contract (*Contrato Proyecto Ampliación Central Térmica Bocamina*), contract ACB-003.06, to supply a turnkey coal-fired electricity generating plant, (hereinafter referred to as the Construction Contract). This information was communicated as a essential event to the Superintendent on the same date.

On January 29, 2013 the Superintendent was informed as a essential event that Endesa Chile had been notified by the Technical Secretariat of the above-mentioned Court that the members of the Consortium had separately responded to Endesa Chile's arbitration request with counterclaims against Endesa Chile. The Technicont companies' claim was for US\$1,294 million, and the SES companies' counterclaim was for US\$15 million.

On January 29, 2015, the Board of Empresa Nacional de Electricidad S.A. approved the terms, and all its elements of essence and nature as well as those merely incidental, of a document called the "Conditional Transaction, Termination and Cancellation", hereinafter the Transaction, where all the parties that signed this document (Empresa Nacional de Electricidad S.A. and the Consortium) terminate the above arbitration and a broad mutual settlement for liabilities under the Construction Contract were agreed. It leaves on record that the Endesa Chile Board approval of the Transaction is subject to the proper and timely fulfilment the preceding conditions agreed in this instrument, which include that each and every Board and/or governing body of the companies that make up the Consortium have accepted and expressly approved all the terms of the Transaction and all its elements in essence and nature as well as those that are merely incidental. If the preceding conditions cannot be verified in a timely and appropriate manner, this Transaction will have no value and will be unenforceable, in accordance with the terms of the Transaction.

Finally, the financial effect of the Transaction on Endesa Chile and the Bocaina II Project in particular, is the recognition of an increase in capital investments of US\$125 million.

e.- As of April 22, 2015, Endesa Chile has been informed of a significant event released as of the same date by our ultimate parent company, Enel, in which it refers to the convening of the Boards of Directors of Enersis, Endesa Chile and Chilectra to begin the process of assessing of a potential corporate reorganization to separate electricity generation activities and assets in Chile from those in Argentina, Brazil, Colombia and Peru.

No other subsequent events have occurred between January 1, 2015 and the issuance date of these financial statements.

APPENDIX 1 ENERSIS GROUP COMPANIES

This appendix is part of Note 2.4, "Subsidiaries." It presents the Group's percentage of control in each company.

- 33
- On April 22, 2014, Endesa Chile acquired the remaining 50% equity interest in Inversiones GasAtacama Holding Limitada, (See Note 5).

 On September 3, 2014 Enersis acquired 100% of the social rights of the companies Inkia Holdings (Acter) Limited, Southern Cone Power Ltd., Latin American Holding II Ltd. and Southern Cone Power Peru SAA. On December 31, 2014 Inkia Holdings was merged with Generandes Peru SA, the latter absorbing all the Inkia Group companies.

 On 17 September 2014 the companies Atacama Finance Co and Energex Co were dissolved.

 On December 31, 2014, Inmobiliaria Manso de Velasco was merged with ICT, the latter being the legal successor company under the name of Servicios Informáticos e Inmobiliarios Ltda.

 On 30 December 2014 the companies Aguas Santiago Poniente SA and Constructora y Proyectos los Maitenes SA were sold.

Since not all of our commercial databases in our Group's different subsidiaries distinguish whether the final electricity service consumer is a natural or legal person, the main management segmentation used by all the subsidiaries to monitor and follow up on trade receivables is the following:

- Mass-market clients
- Large clients Institutional clients

Additional information:

1. Basis of Presentation

Enersis S.A. ("the Parent") is a holding company that conducts substantially all of its business operations through its subsidiaries. It is important to consider that for purposes of preparing separate financial statements under International Financial Reporting Standards, the Parent records its investments in subsidiaries and associates at its cost. Dividends received from a subsidiary and associate are recognized in profit or loss in the Parent's separate financial statements when its right to receive such dividend is established. The information described below should be read in conjunction with the consolidated financial statements of Enersis S.A. The basis of presentation and accounting principles used in the preparation of these separate financial statements are described in notes 2 and 3 of the consolidated financial statements except for notes 2.4, 2.4.1, 2.4.2, 2.4.3, 2.5, 2.6 and 3.c which relates to the consolidation process.

2. Restricted Net Assets

Certain assets of the Parent's subsidiaries totaling approximately ThCh\$ 1,964,963,326 constitute restricted net assets, as there are contractual, legal or regulatory limitations on transferring such assets outside of the countries where the respective assets are located, or because they constitute undistributed earnings of affiliates of the Parent recorded under the equity method of accounting. As of December 31, 2014 all of the restricted net assets of the Parent's subsidiaries currently exceed 25% of the consolidated net assets of the Parent and its subsidiaries, thus requiring this Schedule I, "Condensed Financial Information of the Registrant."

RESTATED TEXT OF THE BY-LAWS OF ENERSIS S. A.

<u>CHAPTER ONE</u> Name, Domicile, Duration and Objects

<u>Article 1</u>: A corporation is hereby established that shall be called "Enersis S.A.", governed by these bylaws and, on those matters omitted, by the legislation and regulation applicable to this type of corporation.

Article 1 bis: Notwithstanding the preceding Article, the Company is subject to the provisions of Decree Law No.3,500 and its amendments.

Article 2: The Company's address shall be in the city of Santiago and agencies or branches may be opened in other parts of the country or abroad.

Article 3: The life of the Company is indefinite.

Article 4: The objects of the Company shall be the exploit in Chile or abroad the exploration, development, operation, generation, distribution, transmission, transformation, and/or energy sale in any of its forms or nature, directly or through other companies, as well as telecommunication activities and the provision of engineering consultancy services in the country and abroad. It shall also be its object to invest and manage its investments in its subsidiary and affiliate generation, transmission, distribution or electricity trading companies, or any other subsidiary and affiliate companies whose business is related to any of the following: (i) energy in any of its forms or nature; (ii) supply of public utilities or which have electric energy as their main component; (iii) telecommunications and computer science, and (iv) intermediation business through the Internet. In meeting its main objects, the Company shall carry out the following functions:

- (a) Promote, organize, constitute, modify, dissolve or liquidate companies of any kind whose objects are allied or related to those of the Company.
- (b) Propose the investment, financing and trading policies to its subsidiary companies, as well as the accounting systems and criteria to be followed.
- (c) Supervise the management of its subsidiary companies.
- (d) Provide its subsidiary and affiliate companies with financial resources necessary for their businesses and provide management services for its subsidiaries; financial, commercial, technical and legal advice; auditing services and generally any kinds of service seeming necessary for their best performance.

Apart from its main objects and acting always within the limits set out in the Investment and Financing Policy approved by a Shareholders Meeting, the company may invest in:

- (a) The acquisition, exploitation, construction, rental, management, commercialization and disposal of all kinds of real estate directly or through subsidiary or affiliate companies.
- (b) All kinds of financial assets including shares, bonds and debentures, commercial papers and in general all kinds of securities and holdings in companies, directly or through subsidiary of affiliate companies.

CHAPTER TWO Capital and Shares

<u>Article 5</u>: The capital of the Company amounts to Ch\$ 5,669,280,724,381 divided into 49,092,772,762 common and nominative shares, all of an only series and with no par value, which should be entered and paid in the manner described in the Second Transitory Article of these bylaws.

Article 5 bis: No person shall directly or through other related persons hold more than 65% of the capital with voting rights of the Company or a higher percentage which the law may allow for holding a concentration factor of 0.6. The minority shareholders should hold at least 10% of the capital with voting rights and at least 15% of the capital with voting rights should be held by over one hundred unrelated shareholders each of whom shall hold a minimum equivalent to one hundred *Unidades de Fomento* in shares, according to the value at which they appear in the latest balance sheet. Minority shareholders and related persons shall be understood as defined in current legislation.

<u>Article 6:</u> Shares shall be registered and their subscription shall be recorded in writing in the manner determined under current legislation and regulations. Their transfers and transmission shall be in accordance with those regulations. Payment for subscribed shares may be in cash or other tangible or intangible assets.

<u>Article 7:</u> The Company shall not recognize fractions of shares. Should one or more shares belong jointly to various parties, the co-owners shall all be obliged to provide a power of attorney to act before the Company.

<u>Article 8</u>: Unpaid balances of subscribed shares shall be adjusted in the same proportion as changes in the value of the *Unidad de Fomento*.

<u>Article 9</u>: Shareholders are only responsible for the payment of their shares and are not obliged to return to the Company the amounts of any benefits they might have received as a benefit. In the case of the transfer of subscribed and unpaid shares, the transferor shall be liable severally with the transferee for its payment, and notice must be recorded on the certificate of the share payment conditions.

Article 9 bis: The right to withdraw that a Pension Fund Manager may exercise in the cases foreseen in Article 107 of Decree Law No. 3,500 of 1980 shall be subject to the following special conditions: a) the right to withdraw shall arise on the day of publication of the decision of the Risk Rating Agency which withdraws its approval of the shares of the Company, and the term for exercising such right and for payment of the share price in accordance with paragraph 2 of Article 71 of Law No.18,046 shall run from that date, and b) the value of the share which the Company shall pay to the Pension Fund Manager exercising its withdrawal rights, shall be calculated in accordance with the pertinent Articles of Supreme Decree No.587 dated August, 4, 1982 of the Ministry of Finance, known as Corporation Regulations. However, should the shares have a market quotation, the value per share shall be the greater of the average weighted price in its market trading during the six months prior to the date of the withdrawal of approval decision of the Risk Rating Agency causing the withdrawal, duly adjusted for inflation in line with changes in the Consumer Price Index between the day of each transaction and the date of that decision, and the market value on that day defined as the average price of transactions on the stock market. The higher value so calculated shall be applicable only if it be greater than that determined in accordance with the provisions of the Risk Rating Agency shall be considered as the date for calculating the book value.

<u>Article 10</u>: Private agreements between shareholders relating to shares disposal, shall be registered with the Company and made available to other shareholders and interested third parties and reference shall be made to them in the Shareholders Register. If this procedure is not followed, such agreements shall be not opposable to third parties. Such agreements shall not affect the obligation of the Company to register without further formality the transfers that are presented, in accordance with the law.

<u>Article 11</u>: The Shareholders Register, the details to be stated on share certificates and the procedure in the case of lost or mislaid certificates, shall comply with the pertinent legal rules and regulations.

CHAPTER THREE Administration

<u>Article 12</u>: The Company shall be administered by a Board of Directors composed by seven re-eligible members who may or may not be shareholders of the Company.

<u>Article 13</u>: Members of the Board of Directors shall be elected by the Ordinary Shareholders Meeting. The Board of Directors shall remain for a period of three years at the end of which it shall be completely renewed or re-elected.

Article 14: Board of Directors' meetings shall be constituted with the absolute majority of the Directors and decisions shall be taken by the absolute majority of the Directors present with voting rights. In the case of a tied vote, the person presiding the meeting shall decide.

<u>Article 14 bis</u>: All acts or contracts entered into by the Company with its majority shareholders, its Directors or Executives or with parties related to these, shall be previously approved by two-thirds of the Board of Directors and appear in the corresponding minutes, notwithstanding the provisions of Chapter XVI of Law No.18,046.

Article 15: The Board of Directors shall meet at least once every month and whenever the Company's business so requires. There shall be ordinary and extraordinary Meetings. The former shall be held on dates pre-established by the Board of Directors itself; the latter when especially convened by the Chairman himself or at the request of one or more Directors. Extraordinary Meetings may only deal with those matters specifically included in the meeting notification. In the first session following the appointment of the Directors at an Ordinary Shareholders Meeting, the Board of Directors shall elect a Chairman and Vice-chairman to replace him in his absences, from amongst its members.

Article 16: The Directors shall be remunerated. The Ordinary Shareholders Meeting will set the amount of remuneration annually. The Chairman shall be entitled to receive twice the amount paid to each Director. The Vice-chairman shall be entitled to one and a half times the amount paid to each Director.

Article 17: The Board of Directors of the Company represents it judicially and extra-judicially and to comply with its objects which it shall not be necessary to demonstrate to third parties, has all the powers of administration and disposal which the Law or the bylaws do not reserve for the Shareholders Meeting, without the necessity to give it any special powers, even for those acts or contracts for which the law demands such. This does not impede actions appropriate to the Chief Executive Officer. The Board of Directors may delegate part of its powers to the Chief Executive Officer, Managers, Assistant Managers, Lawyers and senior executives of the Company, to one Director or to a Committee of Directors and to other persons for especially defined objectives.

Article 17 bis: In carrying out the powers set out in the preceding Article, the Board of Directors shall act always within the limitations set by the investment and financing policy approved at the ordinary shareholders meeting in accordance with the terms of Article 119 of Decree Law No.3,500 of 1980, and its amendments.

Article 18: The Company shall have a Chief Executive Officer who shall be appointed by the Board of Directors and shall be granted all the powers of a commercial agent and those expressly agreed by the Board of Directors. The position of Chief Executive Officer is incompatible with that of Chairman, Director, Auditor or Accountant of the Company.

CHAPTER FOUR Shareholders' Meetings

Article 19: Shareholders shall meet in Ordinary and Extraordinary Meetings. The former shall be held once each year within four months following the balance sheet date to decide on matters of mutual interest without necessarily being mentioned in the respective meeting notification. The latter may be held at any time as required by the business to decide on any matter which the Law or these bylaws reserves for consideration by a shareholders meeting and provided these matters are stated in the respective meeting notification. Notifications of Ordinary and Extraordinary Meetings shall not be necessary when the whole number of validly issued shares is represented at the respective meeting. When an extraordinary meeting has to resolve on matters appropriate to an ordinary shareholders meeting, its procedures and resolutions shall be subject, where appropriate, to the quorums applicable to the latter class of meetings.

Article 20: The following are matters for an Ordinary Meeting: 1) Examination of the situation of the Company and of the reports of accounting inspectors and external auditors and the approval or rejection of the annual report, balance sheet, financial statements and presentations prepared by the managers or liquidators of the Company; 2) The distribution of profits for each year and, especially, the dividend distribution; 3) The election or renewal of the members of the board, of liquidators and of management inspectors; and 4) Generally, any matter of general interest which is not reserved for an extraordinary meeting. Ordinary meetings shall appoint independent external auditors annually to examine the accounts, inventories, balance sheet and other financial statements, and to inform the following ordinary meeting in writing of its findings.

Article 20 bis: In addition to the terms of the preceding Article, the Ordinary Meeting shall be responsible for approving the investment and financing policy proposed by the management in the terms contemplated in Article 119 of Decree Law No.3,500 of 1980 and its amendments. It shall also be the responsibility of the Ordinary Meeting to appoint annually the inspectors of accounts and their respective alternates, with the powers established in Article 51 of Law No.18,046.

Article 21: The following are matters for an Extraordinary Meeting: 1) The dissolution of the Company; 2) Transformation, merger, or division of the Company and amendments to its bylaws; 3) Bond and convertible debenture issuances; 4) The disposal of fifty or more percent of assets, with or without its liabilities, to be determined on the basis of the balance sheet for the previous financial year; and likewise, any business plan definition or amendment that involves the sale of assets above the aforementioned percentage. Likewise the sale or transfer of ownership of fifty percent or more of the assets of a subsidiary, provided that this represents at least 20% of the assets of the company, and any disposal of its shares that implies that the parent company ceases to be its controller; 5) The granting of real or personal guarantees to secure third party obligations, unless granted to subsidiaries, in which case, the approval of the Board will be sufficient and; 6) Other matters which, by law, or by these Bylaws, should be known by, and subject to the Shareholders Meetings. The matter referred to in items one, two, three and four may only be agreed upon in Meetings held before a Notary, who must certify that the Minutes of the Meeting is the true expression of what occurred and was agreed upon in the meeting.

Article 21 bis: Notwithstanding the terms of the preceding Article, the following shall also be matters of an Extraordinary Meeting: a) The disposal of assets or rights of the Company which are declared essential for its business in the investment and financing policy, as well as the granting of guarantees over them; and b) The modification in advance of the investment and financing policy approved by the Ordinary Meeting.

Article 22: Meetings shall be convened by the Board of Directors of the Company and notifications shall be effected by means of a conspicuous advice which shall be published at least three times on different days in the newspaper which the Meeting shall nominate. It shall also send a notification by mail to every shareholder at least 15 days prior to the date of the meeting, which should mention the matters for consideration at the meeting, as well as an explanation of the way full copies of the documents justifying the various options submitted to a vote can be obtained, if any, which should be made available to shareholders on the web site of the Company. The omission of this obligation shall not affect the validity of the notification, but the Directors, Liquidators and Managers of the Company at fault shall be responsible for any damage suffered by shareholders, irrespective of the administrative sanctions which the Superintendency may apply. However, those meetings attended by the whole of the issued shares with voting rights may be self-convened and held validly even when the required formalities for notifications have not been complied with. All shareholder meetings must be informed to the Superintendency of Securities and Insurance at least 15 days in advance.

Article 23: Meetings are constituted with an absolute majority of shares with voting rights on the first notification, and with those present or represented, whatever their number, on the second notification, and resolutions shall be adopted by the absolute majority of the shares present or represented with voting rights. Notices of the second notification may only be published once the meeting subject to the first notification fails to convene, and in any case the new meeting should be convened within 45 days following the date fixed for the meeting not held. Meetings shall be presided by the Chairman of the Board of Directors or the person taking his place, and the Secretary of the Board of Directors of the Company, or the Chief Executive Officer in his absence, shall act as Secretary of the meeting.

<u>Article 24</u>: Resolutions of Extraordinary Shareholders' Meetings which relate to modifications of the bylaws shall require the vote of two-thirds of the shares with voting rights.

Article 24 bis: As long as the Company remains subject to the terms contained in Chapter Twelve and other relevant parts of Decree Law No. 3,500, of 1980, as amended, any modification to the regulations set out in the First, Fifth, Ninth, Fourteenth, Seventeenth, Twentieth, Twenty-First, Twenty-Seventh and Thirty Seven Supplementary Articles and the present Article, shall require the consenting vote of 75% of the issued shares with voting rights, in accordance with Article 121 of the said Decree Law No.3,500.

<u>Article 25</u>: Only those shareholders registered in the shareholders register five days before the date for which the respective Meeting is convened, may participate in meetings and exercise their rights to speak and vote. Shareholders without voting rights, as well as the Directors and Managers who are not shareholders, may participate in General Meetings with a right to speak.

<u>Article 26</u>: Shareholders may be represented at meetings by another person even if such person is not a shareholder, notwithstanding that established in Article 45 bis of Decree Law No.3,500. Proxies for such representations shall be given in writing for all the shares held by the owner on the date stated in the preceding Article.

Article 27: Shareholders shall have a right to one vote for each share they own or represent, and may accumulate or distribute them as they wish in any election.

Article 27 bis: Notwithstanding the contents of the preceding Article, no shareholder may exercise for his own account or on behalf of other shareholders, the right to vote for a percentage of subscribed shares with voting rights of the Company in excess of the maximum concentration permitted in the bylaws and must deduct any excess over this limit for this purpose. For calculating this percentage, the shares held by the shareholder shall be added to those of parties related to the former. Neither may any person represent shareholders who in aggregate hold more than the maximum concentration level permitted in the bylaws.

CHAPTER FIVE The Directors' Committee and Audit Committee

Article 28: While the corporation meets the equity and concentration requirements established in Article 50 bis, or that succeeding or replacing it, of Law No.18,046, it shall be obliged to appoint an independent director and a Directors' Committee. This Committee shall be governed in its formation, membership, functioning and powers by the provisions of the Chilean Companies Act and instructions on this subject issued by the Superintendency of Securities and Insurance.

Article 29: Notwithstanding the provisions of the preceding Article and while the Company is an issuer of securities duly registered with the New York Stock Exchange (NYSE) or any other American national stock exchange, the formation, membership, functioning and powers of the Directors' Committee shall also be governed, where not to be contrary to Chilean law, by the obligatory provision for the so-called "Audit Committee" in the Sarbanes Oxley Act (SOX) of the United States of America and the instructions issued by the Securities and Exchange Commission (SEC) and the New York Stock Exchange (NYSE), or the organism or entity that definitively corresponds in accordance with the legislation of the United States of America. In case of a irreconcilable or irremediable conflict, disagreement or incompatibility between the provisions of Chilean and American legislation for the Directors' Committee and the Audit Committee respectively, Chilean law shall prevail over foreign law, although the Board may call an Extraordinary Shareholders Meeting to amend the by-laws should this be necessary, and shall have the widest powers, acting within its powers, to solve such conflict, disagreement or incompatibility should this be possible, by the creation of new committees and/or sub-committees, as also the delegation of part of its powers in accordance with Article 40 of the Corporations Law. The shareholders, directors and Board of the company should ensure at all times that the agreements and policies adopted by it are compatible and harmonious with the provisions of both legislations.

Article 30: The Directors' Committee shall be composed of three members, the majority of whom shall be independent according to the criteria and requirements established for this purpose in Article 50 bis of Law 18,046, both at the time of their appointment and during the whole period in which they perform as members of the Committee. Notwithstanding the above and complementing the provisions of Article 29 above, while the corporation is an issuer of securities duly registered on the NYSE or any other American national stock exchange, and in order to give strict compliance with the legal and regulatory requirements that the registration involves, all the members of the Directors' Committee should also meet the criteria and requirements of independence prescribed for this purpose by the SOX, SEC and NYSE. Thus, no director who has been elected or appointed as a member of the Directors' Committee may therefore have any link, interest or dependence with the corporation, whether economic, professional, credit or commercial, whatever the amount or nature, nor receive, directly or indirectly, any income, remuneration or compensation from the corporation or any of its subsidiaries which is not by concept nor has as the sole and exclusive source the duties performed as a member of the Board, as a member of the Directors' Committee or as a member of any other committee or sub-committee of directors of the Company.

Article 31: The loss of independence which, according to the laws governing the Company and these by-laws, affects a member of the Committee, shall generate the following incapacity of the respective director to perform their duties as a director or member of the Directors' Committee and therefore they should cease automatically in that position, notwithstanding their responsibility to the shareholders.

Article 32: The directors appointed as members of the Directors' Committee shall remain as such for the period they were appointed as director and may only resign from this position when they resign as director or having acquired a following incapacity to perform the duties, in which case the provisions of the preceding Article shall apply. No director elected or appointed as a member of the Directors' Committee may be excused from this election or appointment.

Article 33: The meetings of the Directors' Committee shall be validly constituted with the absolute majority of its members and its resolutions shall be adopted by the absolute majority of the members present. The Directors' Committee should elect a Chairman from among its members, who shall have the casting vote in the event of a tied vote.

Article 34: The Committee shall have the powers and duties that have been expressly contemplated both in the laws and their regulations, as well as the rules issued for the purpose by the competent administrative authority, especially those stated in Article 50 bis of Law 18,046, and any other matter, mandate, power or duty commended to it by a shareholders or board meeting.

Article 35: The deliberations, agreements and organization of the Directors' Committee shall be governed, in everything applicable, by the regulations relating to the board meetings of the Company.

CHAPTER SIXBalance Sheet, Funds and Earnings

Article 36: As of December 31 of each year, a financial statement with the operations of the Company shall be prepared, and the Board of Directors shall present this to the Ordinary Shareholders Meeting together with a report analyzing the situation of the Company and the statement of income and the related report provided by the inspectors of accounts and external auditors. All these documents must reflect clearly the equity position of the Company at the close of the respective year and the profits obtained or losses suffered during the year.

Article 37: On a date no later than the first notification convening the Ordinary Meeting, the Board of Directors should make available to each shareholder registered in the respective register a copy of the duly audited Financial Statements and Annual Report of the Company, including the reports of the external auditors and inspectors of accounts, and their respective notes. The duly audited balance sheet and statement of income and other information which the Superintendency of Securities and Insurance requires, shall be published once in a widely-circulating newspaper in the location of the registered address, no less than 10 nor more than 20 days before the date on which the meeting to approve them is to be held, notwithstanding their publication on the web site of the Company. These documents should also be presented within the same time period to the Superintendency of Securities and Insurance with the requested number of copies. The annual report, balance sheet, inventories, minutes of Board and Shareholders Meetings, books and reports of inspectors, must be available to shareholders in the offices of the Company for 15 days prior to the date informed for the meeting. Should the balance sheet and statement of income be altered by the Meeting, the amendments, where corresponding, shall be sent to shareholders within 15 days from the date of the Meeting and shall be published in the same newspaper in which these documents had been published, and within the same time period.

Article 38: Unless otherwise approved at the respective Meeting with the unanimous vote of the shares issued, a cash dividend shall be distributed annually to shareholders, pro rata to their shares, for at least 30% of the net income for each year. In any event, the Board of Directors may, under the personal responsibility of the Directors present at the respective approval, distribute interim dividends during the year as a charge against the profits of that year, provided that there are no accumulated losses. That portion of profits earnings not appropriated by the Meeting to dividends, may be capitalized at any time, subject to amending the bylaws through the issue of free shares or by increasing the nominal value of the shares, or be retained to meet possible dividend payments in following years.

CHAPTER SEVEN Dissolution and Liquidation

Article 39: The dissolution of the Company shall occur in the cases foreseen in the Law. Dissolution in advance shall only be agreed at an Extraordinary Shareholders Meeting with the consenting vote of two-thirds of the issued shares with voting rights.

Article 40: Once the Company is dissolved, the liquidation shall be performed by a Liquidation Committee formed by three people, shareholders or not, chosen by the Shareholders Meeting, and who shall have the powers, duties and obligations established in the law or regulations. If the Company is dissolved as a result of all the shares being held by one person through an uninterrupted period of at least ten days, liquidation shall be unnecessary.

Article 41: The liquidators shall convene an Ordinary Shareholders Meeting in the month of April each year to report on the state of the liquidation. Should the liquidation not be completed within two years, a new election of liquidators shall be made, the same persons being reeligible. The position of liquidators is remunerated and the Ordinary Shareholders Meeting shall set the remuneration. The position of liquidator is revocable by an Ordinary or Extraordinary Shareholders Meeting. Liquidators shall be suspended from their positions by overriding legal incapacity or by their declaration of bankruptcy.

CHAPTER EIGHT General Provisions

Article 42: The differences which may arise between the shareholders as such, or between them and the Company or its officers, either during its existence or its dissolution, will be solved by an arbitrator named by common accord between both parties, who will exercise the role as arbitrator in such a proceeding, and must decide according to Law. In the absence of such an agreement, the arbitrator shall be designated by Common Courts at the request of either party, in which case such nomination must be from attorneys who teach or who have taught as Professors of Economic or Commercial Law in the Department of Law at the *Universidad de Chile*, *Universidad Católica de Chile* or *Universidad Católica de Valparaíso*. Notwithstanding the above, in the event of a conflict, the plaintiff may withdraw his recognition of the authority of the arbitrator, and submit to the jurisdiction of the Common Justice, a right that cannot be exercised by the directors, managers, administrators and senior executives of the Company, nor by those shareholders that individually hold, directly and indirectly, shares whose book or market value exceeds 5,000 *Unidades de Fomento*, according to the value of this unit on the date of presentation of the demand.

<u>Article 43</u>: On those matters omitted by these bylaws and in any matter not expressly foreseen in them, the provisions of Law No.18,046 shall apply, together with its amendments and regulations and relevant parts of Decree Law No.3,500 in the case foreseen in Article 111 of that Decree Law.

TRANSITORY ARTICLES

<u>First Transitory Article</u>: For the purposes of the Twenty-Second Article of these bylaws, the meeting agrees that publications for convening Ordinary and Extraordinary Shareholders Meetings shall be effected in the "*El Mercurio*" newspaper of Santiago.

Second Transitory Clause: The corporate capital amounts to Ch\$ 5,669,280,724,381 divided into 49,092,772,762 common and nominative shares of a same series and of no par value, which is entered and shall be entered, subscribed and paid in the following manner: a) with Ch\$ 2,824,882,835,000 divided into 32,651,166,465 shares all subscribed, paid and issued; and b) with Ch\$ 2,844,397,889,381 which shall be entered through the issue of 16,441,606,297 shares for payment, in accordance with the increase agreed by the Extraordinary Shareholders Meeting held on December 20, 2012. These shares shall be issued by the board on the one occasion to be paid in cash at the time of their subscription either (a) in cash, by check or bankers draft, or (b) by the contribution of the corporate participations of Cono Sur Participaciones, S.L., as indicated in the reports made by Eduardo Walker Hitschfeld, IM Trust Asesorías Financieras S.A. and Claro y Asociados Ltda. which, according to the resolutions adopted at the Extraordinary Shareholders Meeting of the company of December 20, 2012 have been valued at Ch\$ 1,724,400,000,034. The shares corresponding to the increase should be subscribed, paid and issued within one year from the date of the mentioned Extraordinary Shareholders Meeting.

302 CERTIFICATION

- I, Luca D'Agnese certify that:
- 1. I have reviewed this annual report on Form 20-F of Enersis S.A.;
- 2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;
- 3. Based on my knowledge, the financial statements, and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the company as of, and for, the periods presented in this report;
- 4. The company's other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f)) and 15d-15(f)) for the company and have:
 - (a) Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the company, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;
 - (b) Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;
 - (c) Evaluated the effectiveness of the company's disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and
 - (d) Disclosed in this report any change in the company's internal control over financial reporting that occurred during the period covered by this annual report that has materially affected, or is reasonably likely to materially affect, the company's internal control over financial reporting; and
- 5. The company's other certifying officer and I have disclosed, based on our most recent evaluation of internal control over financial reporting, to the company's auditors and the audit committee of the company's board of directors (or persons performing the equivalent functions):
 - (a) All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the company's ability to record, process, summarize and report financial information; and
 - (b) Any fraud, whether or not material, that involves management or other employees who have a significant role in the company's internal control over financial reporting.

Date: April 30, 2015

302 CERTIFICATION

- I, Javier Galán A., certify that:
- 1. I have reviewed this annual report on Form 20-F of Enersis S.A.;
- 2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;
- 3. Based on my knowledge, the financial statements, and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the company as of, and for, the periods presented in this report;
- 4. The company's other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f)) and 15d-15(f)) for the company and have:
 - (a) Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the company, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;
 - (b) Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;
 - (c) Evaluated the effectiveness of the company's disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and
 - (d) Disclosed in this report any change in the company's internal control over financial reporting that occurred during the period covered by this annual report that has materially affected, or is reasonably likely to materially affect, the company's internal control over financial reporting; and
- 5. The company's other certifying officer and I have disclosed, based on our most recent evaluation of internal control over financial reporting, to the company's auditors and the audit committee of the company's board of directors (or persons performing the equivalent functions):
 - (a) All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the company's ability to record, process, summarize and report financial information; and
 - (b) Any fraud, whether or not material, that involves management or other employees who have a significant role in the company's internal control over financial reporting.
